
Contents

1. The study of international economics **1**

Four events: *Floating the dollar*. *The American import invasion and protectionism*. *The victory of OPEC*. *Regulating the multinationals*. Economics and the nation state. Different moneys. Different fiscal policies. Factor mobility. Separate markets. The scheme of this book.

part I The theory of international trade

2. The pure theory of international trade: Supply **17**

The trade issue. An early view—Ricardo's law of comparative advantage. Production-possibility curves with constant costs. Increasing opportunity costs. Factor proportions. Decreasing costs (increasing returns to scale).

3. The pure theory of international trade: Demand **36**

Trade with demand and supply. Behind the demand curves: Indifference curves. The gains from trade. The terms of trade. Different tastes as a basis for trade. More commodities, more countries.

4. Trade and income distribution **58**

Prices affect the income distribution. The Stolper-Samuelson theorem. The factor-price equalization theorem. A more general view of trade and factor rewards: *Factor specialization*. *Factor mobility*. *Consumption patterns*. Who are the exporting and the import-competing factors? The Leontiev paradox.

The paradox retained: A closer look at trade and factor proportions. U.S. labor's stake in foreign trade.

5. Economic growth and changes in trade 81

Shifts in demand: *Engel effects and Engel's Law. The representative-demand hypothesis.* Factor growth: *Completely neutral growth. Unbalanced growth in one country.* The case of immiserizing growth. Trends in the trade position of primary-product exporters: *The gains from opening trade. Trends in the terms of trade for primary-product exporters.* Technological change and trade: *Technology as factors of production. New goods and the product cycle. Does the technological leader have a disadvantage?*

part II Trade policy

6. The basic analysis of a tariff 111

A preview of conclusions. The effect of a tariff on consumers. The effect on producers. The effective rate of protection. The tariff as government revenue. The net national loss from the tariff. Past measurements of the national loss. Toward better measures. The tariff again, with production and indifference curves.

7. Arguments for and against a tariff 134

The nationally optimal tariff. Retaliation. The troubled world of second best: *A rule of thumb. A tariff to promote domestic production. The infant-industry argument. The infant-government argument.* Noneconomic arguments: *National pride. Income redistribution. National defense.*

8. Other national policies affecting trade 153

The import quota: *Reasons for quotas. Quota versus tariff. Ways of allocating import licenses.* Export barriers. Export subsidies and countervailing duties. Dumping. Retaliation against dumping. Adjustment assistance. State trading. Trade among socialist countries. East-West trade.

9. Trade integration 177

The basic theory of customs unions: Trade creation and trade diversion. Trade creation and trade diversion in practice. Possible dynamic effects of customs unions. The EC's Common Agricultural Policy (CAP). Regional integration among developing countries.

10. OPEC and other international cartels 190

The rise of OPEC. Classic monopoly as an extreme model for cartels. The theoretical limits to cartel power. International oil experience since 1973. Cartels for other primary products.

11. Trade policy and developing countries 207

What is special about trade for the developing countries? Raising the prices of primary products. Commodity price stabilization: *The idea. Problems in practice.* Barriers to exports of manufactures from developing countries. ISI: Import substituting industrialization: *ISI at its best. Recent experience.*

12. The political economy of trade barriers 224

What explains our trade barriers? The goals of policymakers. Biases in lobbying power. Recent evidence of trade lobbying bias. Reinterpreting the history of trade barriers. The political role of the analysis of trade.

part III Foreign exchange and the payments adjustment process

13. The foreign exchange market 243

The basics of currency trading. Functions of the foreign exchange market: *Clearing. Hedging. Speculation.* Forward exchange rates. The spot exchange rate. What determines the demand and supply of a currency: *Money supplies. Transactions demand for money. Exchange-rate expectations.*

14. The balance-of-payments account 263

Definition. Balance-of-payments accounting. Balances within the total: *The merchandise balance. The current account balance. The overall balance (official settlements balance).* Bankers' deficits. The international investment position.

15. Exchange rates and the trade balance 278

The specter of unstable exchange markets. The importance of trade balance stability. Linking the foreign exchange market to export and import markets. Does devaluation improve the trade balance? *It isn't obvious. Four important cases. The pattern. The general formula and the Marshall-Lerner condition.* Elasticity pessimism and optimism. Devaluation and relative prices: *Devaluation and the terms of trade. In the background: Nontraded goods and money.*

16. Income and foreign exchange 301

Setting prices aside. Trade depends on income. Income depends on aggregate demand. The foreign trade multiplier. Foreign income repercussions. How aggregate demand and supply can affect exchange rates. How devaluation can affect national income. Devaluation and income distribution.

17. Money and foreign exchange 319

Money and exchange rates in the long run: *National money as tickets to GNP. Purchasing power parity.* Money and exchange rates in the short run: *The*

same basics again. Other market signals. From the money supply to the balance of payments under fixed exchange rates: *The monetary approach to the balance of payments. The Keynesian view. Problems with the interest-rate link.* From the balance of payments back to the money supply.

part IV Macro-policies for open economies

18. An overview of policy options 339

The options for one country. Financing temporary disequilibriums. Reserve-center financing. Exchange controls. Who should adjust?

19. Internal and external balance with fixed exchange rates 353

Assumptions. The basic demand-policy dilemma. The short-run interest-rate twist. The assignment rule. Perfect capital mobility.

20. Flexible exchange rates and internal balance 365

Monetary policy with flexible exchange rates. Fiscal policy with flexible exchange rates. Is national income more stable with fixed or with flexible exchange rates? *Export demand shocks. Import supply shocks. International capital-flow shocks. Internal shocks.*

21. The debate over fixed and flexible exchange rates 376

The issue of "price discipline". The risk argument. Destabilizing speculation. International currency experience: *The gold standard era, 1870–1914. Inter-war instability. The Bretton Woods era, 1944–1971. Floating rates after 1971.* The limited case for flexible exchange rates.

22. The changing nature of world money 400

Ye olde commodity standard: *Hume's price-specie-flow mechanism. The case for a pure commodity standard.* Gold and other commodities in the long run. From gold to key currencies. Groping for official world money: The IMF and SDRs. The rise of private world money: Eurocurrencies: *Definition. The rise of Eurocurrencies. Effects of the Eurocurrency markets.*

part V Factor movements

23. The international movement of labor 419

The hot potato. Patterns in migration: *The waves of U.S. immigration. To and from Canada. Postwar European migration.* How migration affects labor markets. Public-finance effects: *In the sending country. In the receiving country.* External costs and benefits. Gradualism and selectivity.

24. Long-term portfolio capital	436
Forms of long-term capital. New bond issues. Gains and losses from international lending. The feasibility of controlling international lending. Debt service ratio. Optimal default?	
25. The theory of direct investment	447
A definition. Direct investment is not just a capital movement. Direct investment as imperfect competition. Bilateral monopoly: Direct investment in resource industries in developing countries. Direct investment and welfare. The international corporation. Direct investment and the balance of payments: <i>In the home country. The impact on the balance of payments of the host country.</i>	
26. Policies toward direct investment	465
Instinctive reactions. Foreign control. Market failure. Restricting nonessentials. Mitigating the effects of foreign investment. Joint ventures. Limiting takeovers. Excluding foreigners from the local capital market. Taking the package apart. Disinvestment and disappearing investment. Direct investment and U.S. labor. Government guarantees and insurance. A forum for resolving conflicts over direct investment.	
Appendix A: Factor supply, technology, and production possibilities	481
Appendix B: Deriving the offer curve: Another way of modelling trade demand and supply	488
Appendix C: Factor-price equalization	492
Appendix D: The nationally optimal tariff	500
Appendix E: The monopoly effect of a quota	507
Appendix F: The welfare effects of stabilizing commodity prices	511
Appendix G: The forward exchange market	516
Appendix H: Devaluation, the trade balance, and the terms of trade	523
Appendix I: High finance, or, the international beer-drinking puzzle	530
Index	531
