N° 1404

Preface	ix
<b>Section 1 Human and Machine Intelligence</b>	<b>1</b>
<b>Chapter 1 An Overview of Intelligence</b>	<b>3</b>
What Is Artificial Intelligence?	3
What Is Programming Like without Artificial Intelligence?	3
How Does Artificial Intelligence Make Programming Better?	4
How Does Human Intelligence Work?	4
Goals	4
Facts and Rules	5
Pruning	6
Inference Mechanism	8
Summary	8
<b>Chapter 2 Developing an Artificial Intelligence System</b>	<b>10</b>
Defining Goals	10
Defining Facts	12
Obtaining Data	13
Rules and Inferences	16
Verification through the Inference Mechanism	17
Pruning	19
<b>Chapter 3 Defining Expert Systems</b>	<b>21</b>
Heuristic Rules	22
Blackboard	23
You Can Do It	24
<b>Chapter 4 Natural Language Processing</b>	<b>25</b>
Lexical Analysis	27
Syntax Analysis	27
Semantic Analysis	28

<b>Section 2</b>	<b>Inference Mechanisms: Tools for Machine Thinking</b>	<b>31</b>
<b>Chapter 5</b>	<b>Forward Chaining</b>	<b>33</b>
	Example Using Forward Chaining	35
	The Knowledge Base	36
	Processing the Knowledge Base	37
	Forward Chaining Example	43
	Concepts for Design Implementation	46
	Programming Applications	47
	Forward Chaining Worksheet	51
<b>Chapter 6</b>	<b>Backward Chaining</b>	<b>57</b>
	A Procedure for Designing the Knowledge Base: The Decision Tree	58
	Conversion to IF-THEN Rules	61
	Rule Generating Technique	63
	Processing the Knowledge Base	64
	Conclusion List	65
	Variable List	66
	Clause Variable List	67
	Conclusion Stack	69
	An Example Using the Knowledge Base	71
	Concepts for Design Implementation	78
	The Tool Itself	78
	Programming Applications	79
	Backward Chaining Worksheet	84
<b>Chapter 7</b>	<b>Use of Probability and Fuzzy Logic in Expert Systems</b>	<b>89</b>
	Fundamentals of Probability	90
	Bayesian Probability	91
	Example	92
	Fuzzy Concepts	94
	Probability Membership Table	95
	Summary	97
	Programming Applications	97
<b>Section 3</b>	<b>Expert Systems: Knowledge Plus Inference</b>	<b>105</b>
<b>Chapter 8</b>	<b>Financial Planning Expert System</b>	<b>107</b>
	How Do You Choose a Domain?	108
	How Do You Research Your Topic?	108
	Organizing the Relevant Facts for the Domain	109
	Decision Tree	113
	Backward and Forward Chaining Considerations	116
	Programming Applications	118

<b>Chapter 9</b>	<b>Sales Expert System</b>	<b>120</b>
	Establishing the Facts	121
	Salesperson Personality Types	121
	Instantiating the Facts	122
	Weighting Factors	123
	How Are Weighting Factors Used?	123
	An Example of the System at Work	123
	Assessing the Salesperson Personality Scores	124
	The Customer	126
	Assessing Customer Personality Scores	128
	Assessing the Possible Sales and Customer Combinations	129
	Expert System Assessments	130
	Programming Applications	131
<b>Chapter 10</b>	<b>Learning Evaluation Expert System</b>	<b>135</b>
	Organizing the Data into Topics and Subtopics	136
	Listing the Facts	137
	Assigning Weighting Factors and Establishing Decision Levels	138
	An Example of the System at Work	139
	Verification Using the Inference Mechanism	141
	Additional Applications	143
	Summary	147
	Programming Applications	147
<b>Section 4</b>	<b>Advanced Programming Techniques for Powerful Systems</b>	<b>151</b>
<b>Chapter 11</b>	<b>Fundamentals of Object-Oriented Programming</b>	<b>153</b>
	Creating a Structure	157
	Creating an Object	158
	Overview of Objects and Their Operations	159
	Operations on Objects	159
	Viewing Objects and Structures	160
	Object Operations	161
	Invoking Procedures	162
	A Method for Invoking Procedures	163
	Programming Applications	165
<b>Chapter 12</b>	<b>Object-Oriented Programming: An Engineering Example</b>	<b>177</b>
	Analog-to-Digital Conversion	177
	An Engineering System Using Object-Oriented Programming	180
	Structure	180
	Real-Time Data Acquisition	183
	Process Control	183
	Programming Applications	183

<b>Chapter 13</b>	<b>Object-Oriented Expert Systems</b>	<b>189</b>
	Designing the Structure	189
	Creating an Object	190
	Building the Knowledge Base	190
	Writing the Rules	191
	Using the Knowledge Base	193
	Backward or Forward Chaining	194
<b>Section 5</b>	<b>Advanced Knowledge Representation for Smart Systems</b>	<b>195</b>
<b>Chapter 14</b>	<b>Semantic Nets</b>	<b>197</b>
	Structure and Objects of Semantic Nets	197
	Rule-Based System Using Semantic Nets	198
	Programming Applications	199
<b>Chapter 15</b>	<b>Certainty Factors</b>	<b>204</b>
	Certainty Level Restrictions	206
	Programming Applications	206
<b>Chapter 16</b>	<b>Automated Learning</b>	<b>210</b>
	Example of a Learning System	211
	Programming Applications	214
<b>Section 6</b>	<b>Languages Used in Artificial Intelligence</b>	<b>217</b>
<b>Chapter 17</b>	<b>Using PROLOG to Design Expert Systems</b>	<b>219</b>
	Conceptual Example	219
	Review	222
	Converting Rules to PROLOG	222
	Summary	225
<b>Chapter 18</b>	<b>LISP</b>	<b>226</b>
	Introduction to LISP	226
	Function Evaluation	226
	Lists	228
	List Functions	229
	Predicates or Testing Functions	230
	Variable Assignments	231
	IF-THEN Rules through the Condition Function	232
	New Functions	233
	Summary	234
	Bibliography and Recommended Readings	235
	Index	239
