

Nº 1421

Contents

Preface	page xi
Note to the instructor	xvii
Conventions and notations	xx
1: Optimal strategies for the metabolism of storage materials	1
<i>Biological background</i>	1
<i>Calculation of P and S at the end of the day</i>	3
<i>Calculating the net "profit" from a given amount of storage material</i>	4
<i>The final mathematical problem: maximize profit</i>	7
<i>A simplified model</i>	7
<i>Solution of the simplified mathematical problem</i>	8
<i>Conclusions from the mathematical results</i>	9
<i>The full problem</i>	10
<i>Final remarks</i>	12
<i>Exercises</i>	13
<i>Supplement: List of symbols and their definitions</i>	15
2: Recursion relations in ecological and cellular population dynamics	16
<i>Constant birthrate</i>	16
<i>Birthrate that decreases linearly with population level</i>	17
<i>Steady solutions to equation (7) and their stability</i>	18
<i>Conjectured global behavior</i>	19
<i>The role of parameters</i>	23
<i>Control oscillations</i>	23
<i>The period-doubling route to chaos</i>	25
<i>Chaotic dynamics in cardiac cells</i>	28
<i>Cell maturation</i>	30
<i>Exercises</i>	31
<i>Supplement: A program to iterate equation (2.7)</i>	34

3: Population genetics: separate generations	36
<i>Formulation</i>	36
<i>Steady-state solutions</i>	38
<i>Stability theory</i>	39
<i>Conjectured global behavior</i>	42
<i>Quantitative considerations</i>	44
<i>Discussion</i>	47
<i>Exercises</i>	48
4: Enzyme kinetics	51
<i>Law of mass action</i>	51
<i>Enzyme and substrate</i>	53
<i>Time scale</i>	55
<i>The quasi-steady state</i>	57
<i>Consequences of the quasi-steady-state approximation</i>	58
<i>Validity of the quasi-steady-state approximation</i>	60
<i>Cooperative kinetics</i>	62
<i>Percentage ligand bound in steady state</i>	64
<i>The cooperative enzymatic dimer</i>	67
<i>Product regulation</i>	68
<i>Exercises</i>	70
<i>Supplement: Solution of equations (4.15) and (4.16)</i>	73
5: The chemostat	75
<i>Choice of variables</i>	76
<i>Differential equations and initial conditions</i>	77
<i>Steady solutions</i>	81
<i>Dimensionless variables</i>	84
<i>Stability of the steady states</i>	85
<i>Qualitative behavior and the phase plane</i>	87
<i>Final remarks</i>	91
<i>Exercises</i>	94
6: A model of the cellular slime mold cAMP signaling system	97
<i>The slime mold life cycle</i>	97
<i>The role of cAMP</i>	98
<i>The model</i>	100
<i>Dimensionless variables</i>	103
<i>Steady-state solutions</i>	104
<i>Stability of the steady state</i>	105

The developmental path 108
A simplified model 111
Phase-plane analysis of the simplified model 112
Explanation of relay and oscillation 114
Phase space and the state point 117
Robustness of the results 120
Interaction between analytic and numerical methods 120
Comparison with experiment 122
A modified model 124
Further comparisons with experiment 126
Exercises 128

7: Diffusion 130
The general balance law 130
Fick's law 133
Diffusivity of motile bacteria 135
The rule of thumb for diffusion 140
Exercises 141
Supplement: Verification of equation (7.12) 143

8: Developmental pattern formation and stability theory 146
Background 146
Formulation 149
Dimensionless variables 150
Spatially homogeneous solutions 152
The spatially inhomogeneous case 153
Conditions for inhomogeneous instability 155
The critical wavelength 158
Numerical analysis of the unstable case 160
Patterns in finite intervals 164
The initial-value problem 166
Numerical analysis of the unstable case: finite interval 171
The wavelength for maximum growth rate 173
Further examination of pattern size 178
Modeling experiments in hydra 180
Two approaches to vein patterns in plants 183
Exercises 191
Supplement: Boundary conditions in the numerical analysis and model equations for nonlinear behavior 193

BIBLIOTECA

9: A mechanical basis for morphogenesis	200
<i>Modeling active domains</i>	200
<i>Simulations of folding cell sheets</i>	202
<i>Calcium-actin-myosin interaction</i>	205
<i>Effect of Ca-trigger maturation</i>	208
<i>The possible role of a developmental path</i>	214
<i>Chemical versus mechanical signaling</i>	216
<i>Skin organ primordia and cartilage condensations</i>	220
<i>A final word</i>	220
<i>Exercises</i>	221
Mathematical appendixes	
1: Mathematical prerequisites	223
<i>Function</i>	223
<i>Limit</i>	223
<i>Derivative</i>	223
<i>Higher derivatives</i>	225
<i>Basic rules for manipulating derivatives</i>	226
<i>The chain rule</i>	227
<i>Implicit differentiation</i>	227
<i>Important functions and their derivatives</i>	227
<i>Partial derivative</i>	229
<i>Exercises</i>	230
2: Infinite series and Taylor approximations	232
<i>Exercises</i>	235
3: Difference equations	237
<i>Linear difference equations</i>	237
<i>Linear equations with constant coefficients</i>	238
<i>Steady-state solutions and their stability</i>	241
<i>Exercises</i>	243
4: Linear differential equations with constant coefficients	244
<i>First-order equations – constant coefficients</i>	244
<i>Linear equations</i>	244
<i>Second-order linear equations – constant coefficients</i>	246
<i>A system of two linear equations</i>	247
<i>Final remark</i>	248
<i>Exercises</i>	249

5: Phase-plane analysis	250
<i>Trajectories in the phase plane</i>	250
<i>Steady states</i>	252
<i>Phase portraits near steady states</i>	254
<i>Qualitative behavior of the phase plane</i>	260
<i>Exercises</i>	262
6: Complex numbers	272
<i>Exercises</i>	274
7: Dimensionless variables	275
<i>Dimerization: a sample problem</i>	275
<i>Introducing dimensionless variables</i>	276
<i>Advantages of dimensionless variables</i>	279
<i>Nondimensionalizing a functional relationship</i>	280
<i>Exercises</i>	281
8: Integration	282
<i>Exercises</i>	286
Hints and answers for selected exercises	287
References	291
Index	297
