UNIVERSIDAD NACIONAL DE ENTRE RÍOS
FACULTAD DE INGENIERIA
CENTRO DE MEDIOS
BIBLIOTECA

№ 1 5 0 7

Chapter 1	Review of Electronic Devices	3
	Voltages, Currents, Batteries and Current Sources	3
	Resistors, and Voltage Dividers	6
	Capacitors and Inductors	10
	Transformers	13
	Diodes and Zener Diodes	14
	Transistors	17
	Relays	24
	Power Supplies	25
	Integrated Circuit Regulating Modules	28
	Problems	28
	Experiment 1—Conductivity Sensor	33
Chapter 2	Operational Amplifiers and Instrumentation Amplifiers	37
	General Operational Amplifier Applications	37
	Schematic Diagram of Op-amp	39
	Power Supplies for Op-amp	39
	The Ideal Op-amp	40
	Three Basic Rules of Ideal Op-amp Design	41
	Real-World Op-amps	51
	Instrumentation Amplifiers	53
	Common Mode Signals	54
	Commercial, Monolithic Instrumentation Amplifiers	59
	Isolation Amplifiers	60
	Problems	60
	Experiment 2—Construction of a General-Purpose Differential Bioamplifier	65

Chapter 3	Linear Systems Theory	71
	Linearity and Time Invariance	72
	The Impulse Response	75
	Frequency Domain Analysis	76
	Fourier Analysis	79
	General Mathematical Description of Linear Systems	86
	Zero-Order Systems	87
	First-Order Systems	88
	Second-Order Systems	103
	Predicting the Response of a System to an Arbitrary Input Waveform	112
	Laplace Transform Method of Solving Linear Differential Equations	116
	Problems	124
	Experiment 3A—Calibration of Bioamplifier	129
	Experiment 3B—Operational Amplifier Oscillators	130
Chapter 4	Origin of Biopotentials	137
	Free Diffusion of Uncharged Molecule	137
	Diffusion of a Single Ionic Species	141
	Nernst Potentials	142
	Mobilities of Ions	144
	Diffusion of Two Ionic Species: Diffusion Potentials or Liquid Junction Potentials	145
	The Goldman Equation	147
	Electrical Equivalent Circuit Analogy	149
	Problems	152
	Experiment 4A—Diffusion Potentials	154
	Experiment 4B—Ion-selective Membranes	156
Chapter 5	Human Biopotentials	159
	Graded Potentials	159
	Nerve Action Potential	161
	The Evoked Potential	166
	The Electroencephalogram (EEG)	168
	The Electromyogram (EMG)	168
	The Electrocardiogram (ECG)	170
	ECG Electrodes and Measurements	173
	Problems	177
	Experiment 5—Human Biopotentials	178
Chapter 6	Signals and Noise in Biological Systems	181
	Origins of Noise	181
	Characterizing Noise	182

	Signal Averaging	185
	Electronic Noise Sources, Inherent Noise	186
	Interference Noise	189
	Negative Capacitance Amplifier	189
	Grounding	191
	Driven Shields or Guard Rings	193
	Problems	194
Chapter 7	Biopotential Electrodes	199
	Inserting Metal into Solutions	199
	Half-Cell Potentials	200
	Passing Currents through Electrodes	203
	Electrode Equivalent Circuits	205
	Electrode Polarization	205
	Real-World Polarizable and Nonpolarizable Electrodes	208
	Microelectrodes	209
	Glass Microelectrodes	211
	Metal Microelectrodes	215
	Microelectrodes in Neuroprosthesis	217
	Problems	217
	Experiment 7—Biopotential Electrodes	220
Chapter 8	Ion-Sensitive, Potentiometric, and Amperometric Electrodes	223
	Amperometric and Potentiometric Sensors	224
	Ion-Sensitive Electrodes	224
	pH Electrodes	230
	Liquid Ion Exchanger Potentiometric Electrodes	231
	Solid-State Potentiometric Electrodes	232
	Chemfet Ion-Selective Electrodes	232
	Amperometric Electrodes	233
	Oxygen Electrodes	234
	Enzyme Electrodes	237
	Problems	239
	Experiment 8—The Oxygen Electrode	240
Chapter 9	Mechanical Transducers	243
	Displacement Transducers	244
	Force Transducers	250
	Blood Pressure Measurements	254
	Problems	261
	Experiment 9—Physiology of Muscle as Studied with a Force Transducer	263

Chapter 10	Temperature Transducers	267
	Thermistors	267
	How Do Thermistor Work?	269
	Current-Voltage Relation of a Thermistor	271
	Thermistor Linearization	274
	Semiconductor Integrated Circuit Temperature Sensors	275
	Thermocouple Temperature Sensors	277
	Problems	278
	Experiment 10—The Thermistor	279
Chapter 11	Light and Spectrophotometry	283
	Light	283
	Dual Nature of Light	284
	Interaction of Light with Matter	286
	Absorption Spectra	286
	Laws of Light Absorption	287
	Spectrophotometers	290
	Light Sources	290
	Wavelength Selectors	295
	Photodetectors	298
	The Optoisolator	302
	Problems	304
	Experiment 11—Laws of Photometry, Photodiodes, and LEDs	306
Chapter 12	Measurement of Liquid and Gas Flows	309
	Electromagnetic Flowmeters	309
	Ultrasonic Flowmeters	314
	Dye Dilution Flowmeters	326
	Respiratory Volumes and Velocities: Measurements of Gas Flow	330
	Gas Flowmeters	333
	Problems	335
	Experiment 12A—Dye Dilution Cardiac Output Determinations	339
	Experiment 12B—Measurement of Gas Flows during Respiratory Maneuvers	340
Chapter 13	Analog Linearization	345
	Linearization (or Curve Fitting) in Research Applications	350
	Modeling a Data Set with an Equation	351
	Modeling an Equation with an Analog Circuit	354
	Multifunction Modules	357

Contents		xiii
	Problems	359
	Experiment 13—Analog Linearization	362
Chapter 14	Review of Digital Electronic Devices	371
	A Few Definitions	371
	Why Use Two-State Logic?	373
	Alternative Number Representations	373
	Bits, Nibbles, and Bytes	376
	Logic Gates	377
	Decoding	381
	Tristate Buffers	383
	Latches	387
	Flip-Flops	388
	Problems	394
	Experiment 14 Digital Devices	397
Chapter 15	Talking to Computers	401
	Talking to a Computer: The Programming Language	403
	Programming in BASIC	405
	The BASIC Vocabulary	409
	Graphics Commands	418
	Editing BASIC Programs on the IBM PC/XT	421
	Problems	423
	Experiment 15—Programming in BASIC	425
Chapter 16	Interfacing Computers to the Outside World	427
	Addresses and Data	427
	Talking to IBM PC/XT through Input-Output Channels	430
	Memory versus Input-Output	432
	INP and OUT	432
	Peripheral Interface Adapter (PIA) or the Programmable Peripheral Interface	435
	Bit Masks	441
	A/D and D/A Converters	443
	The D/A Converter	444
	Analog-to-Digital Conversion	447
	Problems	454
	Experiment 16 Computer Control and Data Acquisition	455
Chapter 17	Digital Signal Processing	459
	Data Set and Data Storage	460
	Looking at Our Data	462

Storing and Retrieving Data from a Floppy Disk	463
Low-Pass Smoothing Filters	465
Least-Mean-Square Filters	471
Convolution	475
Problems	478
Experiment 17—Making a Digital Oscilloscope IBM PC/XT	479
Chapter 18 Safety in Bioinstrumentation	481
Pervasiveness of Electricity and of Electrical Shock	482
Electrical Outlet: Hot, Neutral, and Ground Connections	483
Effects of Electrical Current on Human Body	484
Hazards of Microshock	485
Techniques to Reduce Electrical Shock	486
Bring a Concept to the Marketplace: A Case Study	491
Appendix Data Sheets	
A.1 2N3904 Transistor	498
A.2 Crydom Solid-State Relay	499
A.3 LM117 3-Terminal Adjustable Voltage Regulator	500
A.4 TL062 Operational Amplifier	502
A.5 AD545 FET-Input Operational Amplifier	505
A.6 AD522 Instrumentation Amplifier	509
A.7 3450 Isolation Amplifier	513
A.8 LM555 Timer	518
A.9 Ultra Bright Light-Emitting Diodes	523
A.10 Pin Photodiodes	525
A.11 Dual Optocoupler	527
A.12 AD534 Multifunction Module	529
A.13 74LS90 Decade and Binary Counters	535
A.14 DAC0800 Digital-to-Analog Converter	540
A.15 ADC0809 Analog-to-Digital Converter	545
Index	555
