Preface		v
Chapter 1 Introduction		1
1.1 Well-engineered software		3
1.2 The software process		5
1.3 Management process models		12
Chapter 2 Human Factors in Software Engineering		21
2.1 Human diversity		22
2.2 Knowledge processing		24
2.3 Group working		31
2.4 Ergonomics		38
Part One Software Specification		45
Chapter 3 Software Requirements Definition		47
3.1 The software requirements document		51
3.2 System contexts		53
3.3 Requirements definition		56
3.4 Requirements evolution		59
Chapter 4 System Modelling		65
4.1 Viewpoint analysis		66
4.2 Model description		71
4.3 Data modelling		75
Chapter 5 Requirements Specification		85
5.1 Requirements specification notations		86

	5.2	Non-functional requirements	92
	5.3	Requirements validation	97
Chapter	6	Software Prototyping	103
	6.1	Prototyping in the software process	106
	6.2	Prototyping techniques	110
	6.3	User interface prototyping	116
Chapter	7	Formal Specification	121
	7.1	Formal specification rationale	123
	7.2	Transformational development	127
	7.3	Developing a simple formal specification	128
Chapter	8	Algebraic Specification	135
	8.1	Structured algebraic specification	138
	8.2	Error specification	145
	8.3	Design editor specification	146
Chapter	9	Model-Based Specification	153
	9.1	Z schemas	155
	9.2	Specification using functions	159
	9.3	Specification using sequences	165
Part Two		Software Design	169
Chapter	10	Software Design	171
	10.1	The design process	173
	10.2	Design strategies	177
	10.3	Design quality	182
Chapter	11	Object-Oriented Design	191
	11.1	Objects, object classes and inheritance	194
	11.2	An object-oriented design example	203
	11.3	Object identification	213
Chapter	12	Function-Oriented Design	219
	12.1	Data flow diagrams	222
	12.2	Structure charts	223
	12.3	Data dictionaries	227
	12.4	A design example	229
	12.5	Concurrent systems design	234

Chapter 13	Real-Time Systems Design	239
13.1	Systems design	242
13.2	State machine modelling	244
13.3	Real-time executives	245
13.4	Monitoring and control systems	250
13.5	Data acquisition systems	255
Chapter 14	User Interface Design	261
14.1	Design principles	262
14.2	Graphical user interfaces	264
14.3	Command interfaces	275
14.4	User guidance	277
14.5	User interface evaluation	282
Part Three	Programming Techniques and Tools	287
Chapter 15	Programming For Reliability	289
15.1	Fault avoidance	290
15.2	Fault tolerance	296
15.3	Exception handling	299
15.4	Defensive programming	302
Chapter 16	Software Reuse	309
16.1	Software development for reuse	312
16.2	Software development with reuse	318
16.3	Application system portability	321
Chapter 17	Computer-Aided Software Engineering	329
17.1	CASE tools	330
17.2	Tool integration	333
17.3	Object management	341
17.4	Public tool interfaces	343
Chapter 18	Software Development Environments	349
18.1	Programming environments	352
18.2	CASE workbenches	356
18.3	Software engineering environments	359
18.4	The SDE life cycle	362

Part Four	Software Validation	371
Chapter 19	Verification and Validation	373
19.1	The testing process	376
19.2	Test planning	378
19.3	Testing strategies	380
Chapter 20	Software Reliability	389
20.1	Reliability metrics	394
20.2	Software reliability specification	396
20.3	Statistical testing	398
20.4	Reliability growth modelling	401
Chapter 21	Software Safety	407
21.1	An insulin delivery system	410
21.2	Safety specification	412
21.3	Safety assurance	417
Chapter 22	Defect Testing	425
22.1	Functional testing	428
22.2	Structural testing	432
22.3	Residual defect estimation	437
Chapter 23	Testing and Debugging Tools	441
23.1	Dynamic analysers	443
23.2	Test data generators and oracles	446
23.3	File comparators	448
23.4	Simulators	449
23.5	Debugging environments	451
Chapter 24	Static Verification	457
24.1	Program inspections	458
24.2	Mathematically-based verification	461
24.3	Static program analysers	467
24.4	Cleanroom software development	470
Part Five	Software Management	477
Chapter 25	Software Management	479
25.1	Management activities	481
25.2	Software management structures	483
25.3	Programmer productivity	487

Chapter 26	Project Planning and Scheduling	495
26.1	Project milestones	497
26.2	Option analysis	498
26.3	Project scheduling	502
Chapter 27	Software Cost Estimation	511
27.1	Algorithmic cost modelling	514
27.2	The COCOMO model	517
27.3	Algorithmic cost models in project planning	526
Chapter 28	Software Maintenance	533
28.1	Program evolution dynamics	536
28.2	Maintenance costs	538
28.3	Maintenance cost estimation	541
28.4	Measuring program maintainability	544
28.5	Software re-engineering	545
Chapter 29	Configuration Management	551
29.1	Configuration management planning	553
29.2	Change control	555
29.3	System building	559
29.4	Version and release management	560
29.5	Configuration management tools	564
Chapter 30	Documentation	571
30.1	Document classification	572
30.2	Document quality	577
30.3	Document preparation	582
Chapter 31	Software Quality Assurance	589
31.1	Process quality assurance	591
31.2	Software standards	593
31.3	Quality reviews	595
31.4	Software metrics	598
Appendix A	Design Description Using Ada	607
A.1	Ada and Pascal	608
A.2	Ada packages	610
A.3	Parallel programming	613
A.4	A design example	617
