Preface	ix
List of Symbols	xi

№1594

PART ONE

Transducers

1 Analytical Methods

1.1 Introduction	3
1.2 Some Physiological Specifications	5
1.3 Measurement Techniques	8
1.4 The Frequency Spectrum	11
1.5 Laplace Transform Method	13
1.6 Transfer Characteristics of Systems	18
1.7 Feedback Systems	23
1.8 Electrical and Mechanical Analogies	25
References	29
Problems	29

2 Passive Transducers

2.1 Introduction	31
2.2 Variable-Resistance Transducers	32
2.3 Variable-Inductance Transducers	64
2.4 Differential-Transformer Transducers	78
2.5 Variable-Capacitance Transducers	84
References	98
Problems	99

3 Piezoelectric Transducers

3.1 Introduction	103
------------------	-----

3.2	Phenomenological Theory	104
3.3	Transmission Line Analogy	113
3.4	Piezoelectric Transducer at Resonance, Transverse Mode	114
3.5	Equivalent Circuit, Transverse Mode	119
3.6	Design of Cylindrical-Tube Receivers	121
3.7	Medical Instrument Designs	124
	References	131
	Problems	131
4	Ultrasonic Instruments	
4.1	Introduction	133
4.2	Loaded Piezoelectric Transducer at Resonance, Direct Mode	136
4.3	Equivalent Circuit, Direct Mode	141
4.4	Ultrasonic Properties of Tissue	142
4.5	Application to Tissue Visualization	148
4.6	Ultrasonic Blood Flowmeters	152
	References	161
	Problems	162
5	Electrodynamic and Magnetostrictive Transducers	
5.1	Introduction	165
5.2	Electrodynamic Transducers	166
5.3	Magnetostrictive Transducers	189
	References	202
	Problems	202
6	Force Balance Transducers	
6.1	Introduction	205
6.2	Open-Loop Designs	207
6.3	Force Balance Design with Phase-Shift Damping	210
6.4	Servo Accelerometer with Pendulous Design	216
6.5	Pressure Gage with Velocity Pickup and Electrodynamic Force Actuator	219
	References	224
	Problems	224
7	Fiber-Optic Transducers	
7.1	Some Characteristics of Light	227

7.2	Coupling Fundamentals	230
7.3	Fiber-Optic Transducer Applications	235
	References	240
	Problems	240

PART TWO

Signal Processing Circuitry and Microprocessors

8 Operational Amplifiers

8.1	Introduction	243
8.2	Basic Amplifiers with Feedback	244
8.3	Instrumentation Amplifiers	248
8.4	Input Bias Current	251
8.5	Input Offset Currents	252
8.6	Noise Sources	254
8.7	Nonlinear Op-Amp Operations	255
8.8	Summing Circuits	258
8.9	Integrators and Differentiators	261
8.10	Voltage Comparators	262
8.11	Schmitt Trigger (Bistable Multivibrator)	263
	References	265
	Problems	265

9 Analog Filters

9.1	Introduction	267
9.2	The Butterworth Filter	268
9.3	The Chebyshev Filter	275
9.4	The Bessel Filter	278
9.5	Frequency, Network, and Impedance Transformations	281
	References	285
	Problems	285

10 Data Acquisition Circuitry, A/D Converters, and Microprocessors

10.1	Introduction	287
10.2	Multiplexers	289
10.3	Sample-and-Hold Circuitry	291
10.4	Background for Data Converters	292
10.5	Digital-to-Analog Converters	293

10.6	Analog-to-Digital Converters	298
10.7	Microprocessors	303
	References	311
	Problems	311
11	Biotelemetry	
11.1	Introduction	313
11.2	The Signal Source	313
11.3	Antenna and Frequency Design Considerations	315
11.4	Single-Channel FM Unit	321
11.5	Frequency-Modulated Pulsed-RF Unit	323
11.6	Multichannel Time-Multiplex FM Unit	324
	References	329
	Problems	330
12	Frequency Discriminators and Phase-Locked Loops	
12.1	Frequency Discriminators	331
12.2	Phase-Locked Loops	333
	References	338
	Problems	338
PART THREE		
Medical Imaging		
13	Tomographic Imaging Techniques	
13.1	Introduction	341
13.2	Tomography	342
13.3	Simultaneous-Equation Method of Reconstruction	348
13.4	Summation Method of Reconstruction	350
13.5	Algebraic Reconstruction Technique	351
13.6	Reconstruction Using Fourier Transform Techniques	356
13.7	Nuclear Imaging	363
13.8	Ultrasonic Computerized Tomography	366
13.9	Magnetic Resonance Imaging	367
	References	368
	Problems	369
Index		371
