

Contents

1	Local Decompositions of Control Systems	1
1.1	Introduction	1
1.2	Notations	5
1.3	Distributions	14
1.4	Frobenius Theorem	23
1.5	The Differential Geometric Point of View	36
1.6	Invariant Distributions	44
1.7	Local Decompositions of Control Systems	53
1.8	Local Reachability	56
1.9	Local Observability	74
2	Global Decompositions of Control Systems	82
2.1	Sussmann's Theorem and Global Decompositions	82
2.2	The Control Lie Algebra	88
2.3	The Observation Space	92
2.4	Linear Systems and Bilinear Systems	97
2.5	Examples	105
3	Input-Output Maps and Realization Theory	112
3.1	Fliess Functional Expansions	112
3.2	Volterra Series Expansions	120
3.3	Output Invariance	124
3.4	Realization Theory	129
3.5	Uniqueness of Minimal Realizations	141
4	Elementary Theory of Nonlinear Feedback for Single-Input Single-Output Systems	145
4.1	Local Coordinates Transformations	145
4.2	Exact Linearization via Feedback	156
4.3	The Zero Dynamics	172
4.4	Local Asymptotic Stabilization	183
4.5	Asymptotic Output Tracking	190
4.6	Disturbance Decoupling	196
4.7	High Gain Feedback	202
4.8	Additional Results on Exact Linearization	208
4.9	Observers With Linear Error Dynamics	217
4.10	Examples	226

5 Elementary Theory of Nonlinear Feedback for Multi-Input Multi-Output Systems	234
5.1 Local Coordinates Transformations	234
5.2 Exact Linearization via Feedback	243
5.3 Noninteracting Control	259
5.4 Exact Linearization of the Input-Output Response	266
5.5 Exercises and Examples	281
6 Geometric Theory of State Feedback: Tools	289
6.1 The Zero Dynamics	289
6.2 Controlled Invariant Distributions	310
6.3 The Maximal Controlled Invariant Distribution in $\ker(dh)$	320
6.4 Controllability Distributions	338
7 Geometric Theory of State Feedback: Applications	344
7.1 Asymptotic Stabilization via State Feedback	344
7.2 Tracking and Regulation	347
7.3 Disturbance Decoupling	363
7.4 Noninteracting Control with Stability via Static Feedback	365
7.5 Achieving Relative Degree via Dynamic Extension	382
7.6 Examples	391
Appendix A	403
A.1 Some Facts from Advanced Calculus	403
A.2 Some Elementary Notions of Topology	405
A.3 Smooth Manifolds	406
A.4 Submanifolds	411
A.5 Tangent Vectors	415
A.6 Vector fields	425
Appendix B	434
B.1 Center Manifold Theory	434
B.2 Some Useful Lemmas	442
B.3 Local Geometric Theory of Singular Perturbations	447
Bibliographical Notes	459
References	464
Subject Index	475
