

Table of Contents

INTRODUCTION

1. Why Have a Circulation? 3

SECTION 1

THE CIRCULATING FLUID BLOOD

2. Composition of Blood 15
3. The Erythrocytes 22
4. Homeostasis of Composition of Blood: Hemostasis, Clotting,
Agglutination 30
5. Viscosity and the Manner in which Blood Flows 39

SECTION 2

THE VASCULAR BED

6. Arrangements of the Many Vessels 51
7. Walls of the Blood Vessels and Their Function. 63
8. Vascular Smooth Muscle (VSM) 76
9. Transmural Pressures, Pressure Gradients and Resistance to
Flow in the Vascular Bed 86

SECTION 3

THE ENERGETICS of the CIRCULATION

10. Total Fluid Energy, Gravitational Potential Energy, Effects
of Posture 97

11. Kinetic Energy in the Circulation; Streamline Flow and Turbulence; Measurement of Arterial Pressure	104
12. Dissipation of Energy in the Circulation—Work of the Heart	115

SECTION 4

THE HEART and ITS ACTION

13. Origin and Propagation of the Heartbeat; Electrophysiology of the Heart	125
14. The Electrocardiogram and Cardiac Arrhythmias	131
15. Events of the Cardiac Cycle, Heart Sounds and Murmurs	139
16. The Law of the Heart	149
17. Coronary Circulation and Metabolism of Cardiac Muscle	154
18. The Pulse and Its Interpretation	160
19. The Measurement of Cardiac Output and of Cardiac Mechanics	167

SECTION 5

THE REGULATION of the CIRCULATION

20. General View of Homeostatic Control Mechanisms and of Overriding Controls	179
21. Homeostasis of Arterial Blood Pressure; The Carotid Sinus and Aortic Reflexes	183
22. Some Other Cardiovascular Reflexes	194
23. Mechanism of Control of Peripheral Blood Vessels	201
24. Local Autonomous Circulatory Control: Autoregulation, Reactive Hyperemia	211
Index	219
