<i>Preface</i>	xiii
<b>Part I One-dimensional Digital Signal Processing</b>	<b>1</b>
1 Discrete Signals and Systems	3
1.1 Introduction	3
1.2 Discrete signals	4
1.3 Discrete systems	5
1.4 Causality and stability	8
1.5 Frequency response	9
1.6 The sampling theorem	12
1.7 The Z-transform and general linear systems	16
Bibliographical notes	20
Exercises	21
References	22
2 Design of Nonrecursive Filters	23
2.1 Introduction	23
2.2 Filter specifications	24
2.3 FIR design	25
2.4 Filter transformations	28
2.5 Windows	29
2.6 Other methods	31
Bibliographical notes	33
Exercises	33
References	34
3 The Discrete and Fast Fourier Transforms	35
3.1 Introduction	35
3.2 Inversion of the DFT	36
3.3 Circular convolution	37

3.4	Fast Fourier transform	37
3.5	Application to high-speed convolution	40
	Bibliographical notes	41
	Exercises	42
	References	42
4	Analog Filter Design	43
4.1	Introduction	43
4.2	Basic Properties of analog filters	44
4.3	The Butterworth filter	44
4.4	The Tchebychev filter	46
4.5	The elliptic filter	49
4.6	The Bessel filter	59
4.7	Transformations	61
	Bibliographical notes	62
	Exercises	62
	References	63
5	Design of Recursive Filters	64
5.1	Introduction	64
5.2	The impulse-invariant method	65
5.3	Modified impulse-invariant method	65
5.4	Matched Z-transformation technique	66
5.5	The bilinear transformation	67
5.6	Digital filter transformations	69
	Bibliographical notes	71
	Exercises	72
	References	73
6	Quantization Effects in Filters	74
6.1	Introduction	74
6.2	Number representations	75
6.3	Quantization	76
6.4	Coefficient quantization	77
6.5	Product quantization	79
6.6	Signal scaling	81
6.7	The deadband effect	83
	Bibliographical notes	85
	Exercises	86
	References	86
7	Hardware and Software Implementation	88
7.1	Introduction	88

7.2	Basic hardware blocks	89
7.3	Parallel arithmetic circuits	92
7.4	Sequential circuits	94
7.5	Filter implementation	95
7.6	Software design	98
	Bibliographical notes	102
	Exercises	102
	References	102
<b>Part II Two-dimensional Signal Processing</b>		<b>103</b>
8	Two-dimensional Discrete Systems	105
8.1	Introduction	105
8.2	Two-dimensional signals	106
8.3	Discrete systems	106
8.4	Frequency response	107
8.5	The sampling theorem and signal reconstruction	108
8.6	The Z-transform and general linear systems	109
8.7	Causality	111
	Bibliographical notes	112
	Exercises	112
	References	112
9	Stability of Two-dimensional Systems	113
9.1	Introduction	113
9.2	Basic stability theory	114
9.3	Stability conditions via the cepstrum	117
9.4	The planar least squares inverse and stabilization	123
	Bibliographical notes	125
	Exercises	125
	References	126
10	Design of Two-dimensional Filters	127
10.1	Introduction	127
10.2	Two-dimensional windows	128
10.3	Frequency sampling filters	130
10.4	The McClellan transform	134
10.5	Optimization methods	137
10.6	Frequency transformations	142
10.7	Optimization techniques for IIR filters	145
10.8	Design of separable filters	146
	Bibliographical notes	148

	Exercises	148
	References	148
11	Introduction to Digital Image Processing	150
11.1	Introduction	150
11.2	Human perception of images	151
11.3	Colour models	157
11.4	Devices for picture processing	163
11.5	Mathematical models	172
	Bibliographical notes	175
	Exercises	176
	References	176
12	Sampling and Data Compression	178
12.1	Introduction	178
12.2	Sampling	179
12.3	Image quantization	183
12.4	Data compression by transformation	185
12.5	Predictive compression	191
	Bibliographical notes	192
	Exercises	193
	References	194
13	Picture Enhancement, Restoration and Analysis	195
13.1	Introduction	195
13.2	Histograms and grey scale modification	196
13.3	Noise removal and edge sharpening	206
13.4	Geometric distortion removal	209
13.5	Restoration of motion degraded images	211
13.6	Inverse filtering and Wiener deconvolution	215
13.7	Homomorphic filtering	219
13.8	Image feature extraction	222
13.9	The Hough transform	224
13.10	Interpretation of line images	225
13.11	Shape analysis	229
13.12	Stereo vision	231
13.13	Application of knowledge bases	233
	Bibliographical notes	235
	Exercises	236
	References	236
14	Hardware and Software Implementation	239
14.1	Introduction	239

14.2	General processor types	240
14.3	Systolic arrays	242
14.4	Transputer systems	246
14.5	Parallel languages	248
	Bibliographical notes	254
	Exercises	254
	References	254
<b>Part III Pattern Recognition</b>		<b>255</b>
15	Introduction to Pattern Recognition	257
15.1	Introduction	257
15.2	Pattern recognition examples – obtaining measurement vectors	258
15.3	The general pattern recognition problem	262
15.4	Pattern vector scaling	264
	Bibliographical notes	265
	References	265
16	Decision Functions	267
16.1	Introduction	267
16.2	Decision functions	268
16.3	Minimum distance algorithms	272
16.4	Weight space	275
16.5	Training pattern classifiers	276
	Bibliographical notes	283
	Exercises	283
	References	284
17	Statistical Decision Theory	285
17.1	Introduction	285
17.2	Probability densities and decision functions	286
17.3	Bayesian estimation	287
17.4	Selection of linear discriminant functions	289
17.5	Determination of probability densities	291
17.6	Training pattern classifiers	294
	Bibliographical notes	298
	Exercises	299
	References	299
18	Cluster Analysis and Unsupervised Learning	301
18.1	Introduction	301
18.2	Basic principles of cluster analysis	302

18.3	Algorithms for cluster seeking	303
18.4	Graph theoretic clustering	308
18.5	Indirect methods	310
	Bibliographical notes	312
	Exercises	312
	References	312
19	Feature Selection	314
19.1	Introduction	314
19.2	Measures of quality	315
19.3	Clustering transformations and feature ranking	317
19.4	Entropy methods	318
19.5	Functional methods	321
19.6	Stochastic methods and divergence maximization	323
19.7	Binary feature selection	325
	Bibliographical notes	327
	Exercises	328
	References	328
20	Syntactic Methods	329
20.1	Introduction	329
20.2	Formal language theory	331
20.3	Special languages – string language and pattern grammars	339
20.4	Theory of parsing	343
20.5	Stochastic languages and error correction	347
20.6	Grammatical inference	350
20.7	Texture analysis	351
	Bibliographical notes	353
	Exercises	354
	References	355
21	Neural Networks	357
21.1	Introduction	357
21.2	General networks	358
21.3	Neural networks as parallel memories and content addressability	363
21.4	Neural network types	369
21.5	Application of neural networks to pattern recognition	376
21.6	Application of neural networks to image processing	380
	Bibliographical notes	383
	Exercises	384
	References	384

Appendix 1	Mathematical Background	389
A1.1	Sets and functions	389
A1.2	Complex functions	390
A1.3	Vector spaces, norms and Hilbert space	393
A1.4	Matrices and eigenvalues	395
A1.5	Optimization	396
A1.6	The Huygens–Fresnel principle	397
	References	400
Appendix 2	Statistical Background	401
A2.1	Probability theory	401
A2.2	Density functions	402
A2.3	Moments	403
A2.4	The normal distribution	403
A2.5	Correlation	404
	References	405
