CENTRO DE MEDIOS
BIBLIOTECA

PART 1: BASIC PRINCIPLES AND METHODS

1. Introduction to Radioactivity	1
General atomic structure	1
The atomic nucleus	1
Ionizing radiations	5
Radioactive isotopes (radionuclides)	6
Modes of radioactive decay	7
Beta decay	
Gamma decay	
Alpha decay	
Other decay processes	
Units of radioactivity	11
Kinetics of radioactive decay	12
The interaction of ionizing radiation with matter	14
Interaction of α -particles with matter	
Interaction of β -particles with matter	
Interaction of γ -rays with matter	
Radiation dosimetry	18
Radiation protection	18
Protection against the external hazard	
Safety and monitoring of the external hazard	
Protection against the internal hazard	
Disposal of radioactive waste	22
References	24
2. Production of Radioisotopes and their Incorporation into Biochemicals	25
Production of radioisotopes	25
Production of neutron-excess radioisotopes	
Production of neutron-deficient radioisotopes	
Generator produced radioisotopes	
The build up of radioactive material: activation analysis	

Radioisotopic purity	
Natural production of radioisotopes	
General methods of radiolabeling	30
Radioiodination of proteins	33
Oxidation methods	
Conjugation methods	
Radiolabeling of nucleic acids	35
Nick translation labeling of DNA	
Primer extension labeling of DNA	
Radiolabeling of RNA	
End labeling of DNA and RNA	
Technetium (^{99m}Tc) labeling	39
Radiochemical purity	40
Radiochemical storage	41
References	42

3. Measurement of Radioactivity **43**

Measurement of β^- (negatron) emitters	44
Liquid scintillation counting	
Sample preparation for liquid scintillation counting	
Liquid scintillation counting efficiency (quenching)	
Dual label liquid scintillation counting	
Čerenkov counting	
Geiger–Müller counting	
Measurement of γ -emitters and β^+ (positron) emitters	54
Autoradiography	56
Direct autoradiography	
Fluorography	
Intensifying screens	
Non-film methods of autoradiography	
Medical imaging modalities	61
The gamma camera	
Single photon emission computed tomography (SPECT)	
Positron emission tomography (PET)	
Measurement in radiation safety	64
References	65

PART 2: TECHNIQUES AND APPLICATIONS

4. Radioimmunoassay and Ligand Binding Assays **67**

Radioimmunoassay	67
Background	
Production of radiolabeled antigen	
Production of antibody	
Optimization of antiserum dilution	

Optimization of antibody-antigen binding	
Separation of antibody-bound and free antigen	
Sample preparation	
A typical radioimmunoassay: handling the data	
Other immunoassays	
Ligand-binding assays	76
Definitions	
Assay strategy	
Choice of radioisotope	
Separation of bound and free ligand	
Non-specific binding	
Calculation of K_D and B_{max}	
References	84
<hr/>	
5. Radioisotopes and Tracer Techniques	85
<hr/>	
Designing a radiotracer experiment	85
Choice of radioisotope	
Intramolecular position of the radiolabel	
Isotope effects	
Radioisotopic methods of enzyme assay	87
General principles	
Decarboxylases	
Transferases	
Cholesterol metabolism	
Protein kinases	
Phosphatases	
Use of radioisotopes to investigate metabolic pathways	91
Concepts	
The TCA cycle	
Regulation of metabolism	
Drug metabolism	
Endocytosis	
Use of radioisotopes to determine <i>in vivo</i> kinetics	95
Glucose kinetics	
Pharmacokinetics	
Blood flow kinetics	
Use of radioisotopes to study membrane transport processes	104
Transport into intact tissues	
Transport into membrane vesicles	
Transport into cells	
References	107
<hr/>	
6. Use of Radioisotopes in Molecular Biology	109
<hr/>	
DNA sequencing	109
Background	

Interruption of replication (Sanger dideoxy method)	
Chemical degradation (Maxam and Gilbert method)	
Unscheduled DNA synthesis	112
Assay of DNA damage and repair by nick translation	115
<i>In situ</i> hybridization	117
Northern, Western and Southern blots	118
References	120
<hr/>	
7. Radioisotopes in Nuclear Medicine	123
<hr/>	
Radiopharmacology	123
Choice of radioisotope	
Mechanisms of organ targeting	
Factors affecting biodistribution	
Organ imaging (scintigraphy)	126
Central nervous system	
Cardiovascular system	
Hepatobiliary system	
Gastrointestinal tract	
Skeletal system	
Urinary tract	
Endocrine system	
Infection and inflammation imaging	
Tumor imaging	
Non-imaging tests	136
Radioisotope therapy	138
Hyperthyroidism and thyroid cancer	
Metastatic bone disease	
Radioimmunotherapy	
References	140
<hr/>	
Appendices	143
<hr/>	
Appendix A. Physical properties of some radioisotopes commonly used in the biological sciences	143
Appendix B. Physical properties of some radioisotopes commonly used for nuclear medicine imaging	144
Appendix C. Further reading	145
Appendix D. Some useful addresses	146
Appendix E. Legislation concerning radioisotopes	149
Appendix F. Glossary	151
Index	155
