

Contents

	<i>Preface</i>	xi
1	<i>Introduction to Biomedical Equipment</i>	1
	Examples of Biomedical Equipment	1
2	<i>Sensors for Biomedical Devices</i>	6
	Transduction	7
	Passive Versus Active Sensors	7
	Sensor Error Sources	8
	Sensor Technology	9
	Tactics and Signals Processing for Improved Sensing	16
	Conclusion	20
3	<i>Medical and Laboratory Oscilloscopes</i>	21
	Some Oscilloscope Examples	24
	Control Group	26

	Vertical Group	28	
	Horizontal Group	32	
	Trigger Group	33	
	Making Measurements on the 'Scope	38	
	Medical Oscilloscopes	39	
	Nonfade Medical Oscilloscopes	43	
4	<i>ECG and EEG Signals: Where Do They Come From?</i>		49
	Bioelectrical Phenomena	49	
5	<i>Bioelectrical Amplifiers</i>		56
	Input Signal Conventions	58	
	Differential Amplifier Transfer Equation	60	
	Common Mode Rejection	61	
	Differential Instrumentation Amplifiers	64	
	Simple IA Circuit	65	
	Standard Instrumentation Amplifiers	66	
	Gain Control for the IA	67	
	Common Mode Rejection Ratio Adjustment	68	
	AC Instrumentation Amplifiers	69	
	Design Example: An Animal ECG Amplifier	71	
	IC Instrumentation Amplifiers: Some Commercial Examples	75	
	Guard Shielding	79	
	Isolation Amplifiers	83	
	Approaches to Isolation Amplifier Design	84	
	A Commercial ICIA Product Example	93	
	Protected Input Isolation Amplifiers	95	
	Active Electronic Filters	96	
	Filter Characteristics	96	
	High-Pass/Low-Pass Designs	98	
	Integrator and Differentiator Circuits	101	
6	<i>Electrocardiograph Machines</i>		103
	ECG Leads	106	
	ECG Machine Operation	109	
	Evaluating ECG Machine Performance	114	
	ECG Electronics	116	

7	<i>Medical Pressure Measurements</i>	118
	What Is "Pressure"? 119	
	Basic Pressure Measurements 124	
	Blood Pressure Measurement 127	
	Fluid Pressure Transducers 128	
	Fluid Measurement System Faults 130	
	Pressure Measurement Circuits 134	
	Pressure Processing 142	
8	<i>Patient Monitoring Systems</i>	144
	Bedside Monitors 145	
	Central Stations 149	
9	<i>X Rays and Radiation</i>	156
	The Nature of X Rays 156	
	Generating X Rays 160	
	Simple X-ray Machines 166	
10	<i>Defibrillators and Cardioverters</i>	168
	Paddles 173	
	Additional Defibrillator Circuits 175	
	Cardioversion 176	
	Testing and Maintaining Defibrillators 178	
	Safety Note 179	
11	<i>Temperature Sensors</i>	180
	Different Measurement Systems 180	
	Temperature Transducers 181	
	Thermistors 181	
	Linearizing Thermistors 187	
	Thermocouples 188	
	Solid-State Temperature Sensors 190	
	Commercial IC Temperature Measurement Devices 192	
	The LM-335 Device 192	
	Analog Devices AD-590 Devices 196	
	Bimetallic Strips 199	
	Predictive Temperature Measurements 201	

12	<i>Medical Equipment Maintenance: Thoughts on Management, Facilities, and Equipment</i>	203
	Types of MROs 204	
	Types of Organization 206	
	Technical Personnel 210	
	Your System After the Warranty Expires 213	
	Shop Layout and Operation 216	
	Management Approaches 220	
	Overcontrol 224	
13	<i>Respiration Monitors and Apnea Alarms</i>	225
	Flow Measurements 227	
	Flow Detectors 228	
	Other Systems 230	
	Alarm Circuits 232	
	Neonatal Apnea Alarms 235	
14	<i>Patient Telemetry Systems</i>	236
	Radio Telemetry Systems 236	
	Transmitter/Receiver Designs 243	
	Troubleshooting Telemetry Systems 248	
	Portable Telemetry Units 249	
	Landline Telemetry 251	
15	<i>Ultrasonic Systems</i>	254
	Physics of Ultrasonic Waves 256	
	Ultrasonic Blood Flow Detectors 261	
	Echoencephalographs 264	
	Echocardiograms 265	
16	<i>Electrosurgery Machines</i>	267
	RF Power Generators for Electrosurgery 269	
	Measuring RF Power Output from the ESM 276	
	Dummy Loads 277	

17	<i>Decibels</i>	283
	Adding It All Up 285	
	Converting Between dB Notation and Gain Notation 286	
	Special dB Scales 288	
	Conclusion 289	
18	<i>The Care and Feeding of Mechanical Paper Recorders</i>	290
	PMMC Galvanometer Movements 291	
	PMMC Writing Systems 294	
	Recording Potentiometers and Servo-recorders 298	
	X-Y Recorders and Plotters 301	
	Digital Recorders 302	
	Recorder Problems 303	
	Maintenance of PMMC Writing Styluses and Pens 304	
	Dot Matrix Analog Recorders 308	
19	<i>Care and Feeding of Battery-Operated Medical Equipment</i>	311
	NiCd "Memory" 315	
	Charging NiCd Batteries 317	
	Using Bench Power Supplies 318	
	Multiple-Cell Batteries 318	
	Other Batteries 318	
	Conclusion 322	
20	<i>Computers in Medical Instruments</i>	323
	Types of Computer 325	
	Microcomputer Interfacing 328	
	Microcomputers in Instrument and System Design 328	
	Selecting the Right Microcomputer 329	

21	<i>Electromagnetic Interference to Medical Electronic Equipment</i>	333
	"Intermod" Problems	334
	Some Solutions	337
	Dealing with TVI/BCI	340
	Medical Equipment and EMI	343
22	<i>Selecting the Right Solid-State Replacement Components</i>	345
	Exact Replacements	346
	Industry-Standard-Type Numbers	346
	Crossover Guides	346
	Mobile Problems	347
	Derating the Specs	348
	Beyond Cross-matching	349
	Silicon or Germanium	349
	PNP or NPN?	349
	Frequency Response	350
	Alpha and Beta Gain	351
	Gain-Bandwidth Product	351
	Analyzing Maximum Ratings	352
	Mechanical Problems	352
	Conclusion	356
23	<i>Radio Communications for Medical Emergency Units</i>	357
	The Electromagnetic Field	357
	Propagation Phenomena	359
	Propagation Paths	360
	Ground Wave Propagation	362
	Peculiar Problems That Affect VHF Reception	364
	Noise Rejection	365
	Sensitivity	366
	Fading	367
	Intermodulation Problems	369
	Intrabuilding Communications	370
24	<i>Selecting the Right Desktop Personal Computer for Biomedical Systems</i>	373

25	<i>Repairing Water Damage to Medical Equipment</i>	377
26	<i>What Test Equipment and Tools Are Needed?</i>	382
	Tools 382	
	Shop Manuals Are Tools Too! 384	
	Test Equipment 384	
	Selecting and Using a Multimeter 385	
	Types of Multimeter 385	
	How to Connect Meters Into Circuits 390	
	Voltmeter "Errors" 391	
	High-Voltage Probes 392	
	Meters in RF Circuits 394	
	Selecting and Using Signal Generators 395	
	What Kinds of Signal Generators? 396	
	Output Attenuators 400	
	Applications of Signal Generators 403	
	RF Wattmeters 405	
	Measuring RF Power 405	
	Digital Frequency and Period Counters 412	
	Oscilloscopes 413	
	Bench Power Supplies 414	
	Self-contained Instrument Packages 415	
	Specialized Medical Device Test Equipment 415	
27	<i>Preventative Maintenance and Proper Program Design</i>	419
	Keeping It Cool 421	
	Protecting Transistors and IC Regulators 422	
	Other Components 425	
	Large Multiboard Equipment 425	
	IC Printed Circuit Boards 428	
	Conclusion 429	
28	<i>Electrical Safety: Your Job!</i>	430
	What to Do for an Electrical Shock Victim 432	
	How Much Current Is Dangerous or Fatal 432	
	Is High Current Dangerous? 433	

Mechanisms of Electrical Shock 433
Some Cures for the Problem 435
Some General Advice for Safety 438
Microshock: A Particular Medical
Equipment Hazard 439
Maintenance of a Proper Electrical
Environment 444
Conclusion 445
