Preface	v
List of Notations and Symbols	2

CHAPTER I. ALGEBRAIC PRELIMINARIES

§ 1. Set Theory	3
Sets. Single valued transformations. Equivalence classes.	
§ 2. Integral Domains and Fields	5
Algebraic systems. Integral domains. Fields. Homomorphisms of domains. Exercises.	
§ 3. Quotient Fields	9
§ 4. Linear Dependence and Linear Equations	10
Linear dependence. Linear equations.	
§ 5. Polynomials	11
Polynomial domains. The division transformation. Exercise.	
§ 6. Factorization in Polynomial Domains	13
Factorization in domains. Unique factorization of polynomials. Exercises.	
§ 7. Substitution	18
Substitution in polynomials. Zeros of polynomials; the Remainder Theorem. Algebraically closed domains. Exercises.	
§ 8. Derivatives	21
Derivative of a polynomial. Taylor's Theorem. Exercises.	
§ 9. Elimination	23
The resultant of two polynomials. Application to polynomials in several variables. Exercises.	
§ 10. Homogeneous Polynomials	27
Basic properties. Factorization. Resultants.	

CHAPTER II. PROJECTIVE SPACES

§ 1. Projective Spaces	32
Projective coordinate systems. Equivalence of coordinate systems. Examples of projective spaces. Exercises.	
§ 2. Linear Subspaces	37
Linear dependence of points. Frame of reference. Linear subspaces. Dimensionality. Relations between subspaces. Exercises.	

§ 3. Duality	41
Hyperplane coordinates. Dual spaces. Dual subspaces. Exercises.	
§ 4. Affine Spaces	44
Affine coordinates. Relation between affine and projective spaces. Subspaces of affine space. Lines in affine space. Exercises.	
§ 5. Projection	47
Projection of points from a subspace. Exercises.	
§ 6. Linear Transformations	48
Collineations. Exercises.	

CHAPTER III. PLANE ALGEBRAIC CURVES

§ 1. Plane Algebraic Curves	50
Reducible and irreducible curves. Curves in affine space. Exercises.	
§ 2. Singular Points	52
Intersection of curve and line. Multiple points. Remarks on drawings. Examples of singular points. Exercises.	
§ 3. Intersection of Curves	59
Bezout's Theorem. Determination of intersections. Exercises.	
§ 4. Linear Systems of Curves	62
Linear systems. Base points. Upper bounds on multiplicities. Exercises.	
§ 5. Rational Curves	66
Sufficient condition for rationality. Exercises.	
§ 6. Conics and Cubics	69
Conics. Cubics. Inflections of a curve. Normal form and flexes of a cubic. Exercises.	
§ 7. Analysis of Singularities	74
Need for analysis of singularities. Quadratic transformations. Transformation of a curve. Transformation of a singularity. Reduction of singularities. Neighboring points. Intersections at neighboring points. Exercises.	

CHAPTER IV. FORMAL POWER SERIES

§ 1. Formal Power Series	87
The domain and the field of formal power series. Substitution in power series. Derivatives. Exercises.	

§ 2.	Parametrizations	93
	Parametrizations of a curve. Place of a curve.	
§ 3.	Fractional Power Series	97
	The field $K(x)^*$ of fractional power series. Algebraic closure of $K(x)^*$. Discussion and example. Extensions of the basic theorem. Exercises.	
§ 4.	Places of a Curve	106
	Place with given center. Case of multiple components. Exercises.	
§ 5.	Intersection of Curves	108
	Order of a polynomial at a place. Intersection of curves. Bezout's Theorem. Tangent, order, and class of a place. Exercises.	
§ 6.	Plücker's Formulas	115
	Class of a curve. Flexes of a curve. Plücker's formulas. Exercises.	
§ 7.	Nöther's Theorem	120
	Nöther's Theorem. Applications. Exercises.	

CHAPTER V. TRANSFORMATIONS OF A CURVE

§ 1.	Ideals	125
	Ideals in a ring. Exercises.	
§ 2.	Extensions of a Field	127
	Transcendental extensions. Simple algebraic extensions. Algebraic extensions. Exercises.	
§ 3.	Rational Functions on a Curve	131
	The field of rational functions on a curve. Invariance of the field. Order of a rational function at a place. Exercises.	
§ 4.	Birational Correspondence	134
	Birational correspondence between curves. Quadratic transformation as birational correspondence. Exercise.	
§ 5.	Space Curves	137
	Definition of space curve. Places of a space curve. Geometry of space curves. Bezout's Theorem. Exercises.	
§ 6.	Rational Transformations	140
	Rational transformation of a curve. Rational transformation of a place. Example. Projection as a rational transformation. Algebraic transformation of a curve. Exercises.	
§ 7.	Rational Curves	149
	Rational transform of a rational curve. Lüroth's Theorem. Exercises.	

UNIVERSIDAD NACIONAL DE INGENIEROS
 CENTRO DE MEDIOS
 BIBLIOTECA

§ 8. Dual Curves 151
 Dual of a plane curve. Plücker's formulas. Exercises.

§ 9. The Ideal of a Curve 155
 The ideal of a space curve. Definition of a curve in terms of its ideal. Exercises.

§10. Valuations 157

CHAPTER VI. LINEAR SERIES

§ 1. Linear Series 161
 Introduction. Cycles and series. Dimension of a series. Exercises.

§ 2. Complete Series 165
 Virtual cycles. Effective and virtual series. Complete series. Exercises.

§ 3. Invariance of Linear Series 170

§ 4. Rational Transformations Associated with Linear Series . 170
 Correspondence between transformations and linear series. Structure of linear series. Normal curves. Complete reduction of singularities. Exercises.

§ 5. The Canonical Series 176
 Jacobian cycles and differentials. Order of canonical series. Genus of a curve. Exercises.

§ 6. Dimension of a Complete Series 180
 Adjoints. Lower bound on dimension. Dimension of canonical series. Special cycles. Theorem of Riemann-Roch. Exercises.

§ 7. Classification of Curves 186
 Composite canonical series. Classification. Canonical forms. Exercises.

§ 8. Poles of Rational Functions 189

§ 9. Geometry on a Non-Singular Cubic 191
 Addition of points on a cubic. Tangents. The cross-ratio. Transformations into itself. Exercises.
