

Contents

1 The Valence-Bond Model of a Semiconductor, 1

- 1.0 Introduction, 1
- 1.1 Atoms and Their Arrangement in Matter, 2
- 1.2 Conductors, Insulators, and Semiconductors, 5
- 1.3 Intrinsic Conduction, Conduction Electrons, and Holes, 6
- 1.4 The Role of Impurities: Extrinsic Conduction, 17
- 1.5 The Conduction Process, 24
- 1.6 Other Electronic Processes, 57

2 The Energy-Band Model of a Semiconductor, 69

- 2.0 Introduction, 69
- 2.1 Atomic States and Energy Levels, 70
- 2.2 Band Structure of an "Intrinsic" Semiconductor, 73
- 2.3 Band Structure of an "Extrinsic" Semiconductor, 87

2.4 Arrangement of States in the
Band Structure, 92

**3 *The Equilibrium Distribution of Electrons
in the Bands, 100***

3.1 *Distribution Functions, 100*

3.2 Boltzmann Distribution for
Noninteracting Entities,* 104

3.3 Transition Probabilities,* 112

3.4 Fermi-Dirac Distribution Function for Entities
Subject to the Exclusion Principle,* 114

3.5 Temperature Dependence of the Intrinsic
Carrier Concentration,* 116

3.6 Some Consequences of the
Equilibrium Condition, 130

4 *Nonequilibrium Transport of Charge Carriers, 141*

4.0 Introduction, 141

4.1 The Equations of Continuity, 142

4.2 Gauss's Law, 146

4.3 Solution of the Flow Equations,* 152

APPENDIX Laboratory Experiments, 191

General Discussion, 191

Majority-Carrier Effects, 194

Production of Electron-Hole Pairs
and the Energy Gap, 213

Dynamics of Excess Carriers, 221

Manufacture of an "Alloy" Diode, 230

INDEX, 243
