

Contents

Introduction	1
Part I: Bipolar Power Transistors	19
Power Transistor Performance Tradeoffs, <i>P. L. Hower (IEEE Power Electronics Specialists Conference, 1975)</i>	21
Factors Limiting Current Gain in Power Transistors, <i>E. J. McGrath and D. H. Navon (IEEE Transactions on Electron Devices, October 1977)</i>	28
On the Proportioning of Chip Area for Multistage Darlington Power Transistors, <i>C. F. Wheatley, Jr., and W. G. Einthoven (IEEE Transactions on Electron Devices, August 1976)</i>	33
Stable Hot Spots and Second Breakdown in Power Transistors, <i>P. L. Hower, D. L. Blackburn, F. F. Oettinger, and S. Rubin (IEEE Power Electronics Specialists Conference, 1976)</i>	42
An Experimental Study of Reverse-Bias Second Breakdown, <i>D. L. Blackburn and D. W. Berning (IEEE International Electron Devices Meeting, 1980)</i>	55
Turn-Off Characteristics of Power Transistors Using Emitter-Open Turn-Off, <i>D. Y. Chen and B. Jackson (IEEE Transactions on Aerospace and Electronic Systems, May 1981)</i>	60
An Overview of Low-Lost Snubber Technology for Transistor Converters, <i>A. Ferraro (IEEE Power Electronics Specialists Conference, 1982)</i>	65
A 10-kW Series Resonant Converter Design, Transistor Characterization, and Base-Drive Optimization, <i>R. R. Robson and D. J. Hancock, (IEEE Power Electronics Specialists Conference, 1982)</i>	77
A Two-Quadrant Transistor Chopper for Electric Vehicle Drive, <i>R. L. Steigerwald (IEEE Transactions on Industry Applications, July/August 1980)</i>	89
Transistorized PWM Inverter-Induction Motor Drive System, <i>S. C. Peak and A. B. Plunkett (IEEE Industry Applications Society Meeting, 1982)</i>	96
Application of Power Transistors to Residential and Intermediate Rating Photovoltaic Array Power Conditioners, <i>R. L. Steigerwald, A. Ferraro, and F. G. Turnbull (IEEE Transactions on Industry Applications, March/April 1983)</i>	103
Pulse Battery Charger Employing 1000 Ampere Transistor Switches, <i>R. L. Steigerwald (IEEE Industry Applications Society Meeting, 1977)</i>	117
Part II: Gate Turnoff Thyristors/Latching Transistors	123
The Current Status of the Power Gate Turn-Off Switch (GTO), <i>M. Okamura, T. Nagano, and T. Ogawa (IEEE International Semiconductor Power Converter Conference, 1977)</i>	124
Investigations of Gate Turn-Off Structures, <i>H. W. Becke and R. P. Misra (IEEE International Electron Devices Meeting, 1980)</i>	135
Ultra High Voltage, High Current Gate Turn-Off Thyristors, <i>T. Yatsuo, T. Nagano, H. Fukui, M. Okamura, and S. Sakurada (International Power Electronics Conference, 1983)</i>	140
Gating Circuit Developed for High Power Thyristors, <i>N. Seki, Y. Tsuruta, and K. Ichikawa (IEEE Power Electronics Specialists Conference, 1981)</i>	150
Present Condition of High Power GTO Applications, <i>N. Seki, K. Ichikawa, Y. Tsuruta, and K. Matsuzaki (5th International PCI Conference on Power Conversion, 1982)</i>	161
Application Techniques for High Power Gate Turn-Off Thyristors, <i>R. L. Steigerwald (IEEE Industry Applications Society Meeting, 1975)</i>	174
Paralleling of Gate Turn-Off Thyristors, <i>H. Fukui, H. Amano, and H. Miya (IEEE Industry Applications Society Meeting, 1982)</i>	184
Application of Gate-Turn-Off Thyristors in 460 V 7.5-250 hp AC Motor Drives, <i>D. A. Paice and K. E. Mattern (IEEE Industry Applications Society Meeting, 1982)</i>	190
Part III: Power MOS Field Effect Transistors	197
Power MOSFETs—A Status Review, <i>B. R. Pelly (1983 International Power Electronics Conference, 1983)</i>	199
Modeling of the On-Resistance of LDMOS, VDMOS, and VMOS Power Transistors, <i>S. C. Sun and J. D. Plummer (IEEE Transactions on Electron Devices, February 1980)</i>	213
A Parametric Study of Power MOSFETs, <i>C. Hu (IEEE Power Electronics Specialists Conference, 1979)</i>	225
Second Breakdown of Vertical Power MOSFETs, <i>C. Hu and M.-H. Chi (IEEE Transactions on Electron Devices, August 1982)</i>	236
Understanding Power MOSFET Switching Performance, <i>S. Clemente, B. R. Pelly, and A. Isidori (Solid-State Electronics, December 1981)</i>	243
Improving the Reverse Recovery of Power MOSFET Integral Diodes by Electron Irradiation, <i>B. J. Baliga and J. P. Walden (IEEE Industry Applications Society Meeting, 1981)</i>	257

<i>dv/dt</i> Effects in MOSFET and Bipolar Junction Transistor Switches, <i>R. Severns (IEEE Power Electronics Specialists Conference, 1981)</i>	266
A 48V, 200A Chopper for Motor Speed Control, with Regenerative Braking Capability, Using Power HEXFETs, <i>S. Clemente and B. Pelly (IEEE Industry Applications Society Meeting, 1980)</i>	273
Solid State RF Generators for Induction Heating Applications, <i>W. E. Frank and C. F. Der (IEEE Industry Applications Society Meeting, 1982)</i>	285
Part IV: Emerging Transistors Technology	291
High-Voltage Junction-Gate Field-Effect Transistor with Recessed Gates, <i>B. J. Baliga (IEEE Transactions on Electron Devices, October 1982)</i>	292
Optimum Design of Triode-Like JFET's by Two-Dimensional Computer Simulation, <i>K. Yamaguchi and H. Kodera (IEEE Transactions on Electron Devices, August 1977)</i>	303
Characteristics of High-Power and High-Breakdown-Voltage Static Induction Transistor with the High Maximum Frequency of Oscillation, <i>M. Kotani, Y. Higaki, M. Kato, and Y. Yukimoto (IEEE Transactions on Electron Devices, February 1982)</i>	312
The Asymmetrical Field-Controlled Thyristor, <i>B. J. Baliga (IEEE Transactions on Electron Devices, July 1980)</i>	317
Electron Irradiation of Field-Controlled Thyristors, <i>B. J. Baliga (IEEE Transactions on Electron Devices, May 1982)</i>	324
High Gain Power Switching Using Field Controlled Thyristors, <i>B. J. Baliga (Solid-State Electronics, May 1982)</i>	331
Normally-Off Type High Speed SI-Thyristor, <i>Y. Nakamura, H. Tadano, S. Sugiyama, I. Igarashi, T. Ohmi, and J. Nishizawa (IEEE International Electron Devices Meeting, 1982)</i>	339
A New FET-Bipolar Combinational Power Semiconductor Switch, <i>D. Y. Chen, S. Chandrasekaran, and S. A. Chin (IEEE Transactions on Aerospace and Electronic Systems, March 1984)</i>	343
The Monolithic HV BIPMOS, <i>N. Zommer (IEEE International Electron Devices Meeting, 1981)</i>	350
The Insulated Gate Transistor (IGT)—A New Power Switching Device, <i>B. J. Baliga, M. Chang, P. Shafer, and M. W. Smith (IEEE Industry Applications Society Meeting, 1983)</i>	354
A 300 KHz Off-Line Switching Supply Using a Unique BI-MOS Switch Combination, <i>V. Farrow and B. Taylor (Proc. of the 2nd Annual International Power Conversion Conference, 1980)</i>	364
Appendix	375
High-Voltage Device Termination Techniques: A Comparative Review, <i>B. J. Baliga (Proceedings of the IEE, October 1982)</i>	376
Bibliography	383
Author Index	387
Subject Index	389
Editors' Biographies	393
