Contents

Preface v

Chapter 1 ***Introduction to Computers*** *1*

1.1 Introduction 2
1.2 Capabilities of a Computer 2
1.3 Components of a Computer 3
1.4 Language of Computers 5
1.5 Integers and Floating-point Numbers 8
1.6 Variables 10
1.7 Subscripted Variables 11
1.8 Special Functions 12
1.9 Summary 13
References 13

Chapter 2 ***The Flow Chart*** *15*

2.1 Introduction 16
2.2 Flow-chart Symbols 16
2.3 Variable Names 23
2.4 Examples 24
2.5 Computational Errors 36
2.6 Summary 38
Problems 39
References 41

Chapter 3 ***Nonlinear Algebraic Equations*** *43*

3.1 Introduction 44
3.2 Method of Simple Iteration 45
3.3 Interval Halving 46
3.4 Secant Method 52
3.5 Müller Method 57
3.6 Newton-Raphson Method 62
3.7 Lin-Bairstow Method 70
3.8 Error in Root 76
3.9 Comparison of Methods 77
3.10 Summary 78
Problems 78
References 80

Chapter 4 ***Simultaneous Linear Equations, Determinants, and Matrices*** *81*

4.1 Introduction 82
4.2 Solution of Simultaneous Linear Equations 83
4.3 An Elimination Method 84
4.4 Gaussian Elimination for n Equations 88
4.5 Formal Steps in the Gaussian Elimination Method 91
4.6 The Problem of Zeros 94
4.7 Determinants 95
4.8 Evaluating a Determinant by Gaussian Elimination 97
4.9 Gauss-Jordan Elimination for Simultaneous Equations 100
4.10 Gauss-Seidel Iteration 101
4.11 Convergence of Gauss-Seidel Iteration 103

4.12	Comparison of Methods for Solving Simultaneous Equations	107
4.13	Introduction to Matrix Algebra	108
4.14	Matrix Equations	114
4.15	Solution by Matrix Inverse	118
4.16	Constructing the Inverse of a Square Matrix	118
4.17	Matrix Eigenvalue Problems	121
4.18	Properties of Eigenvalues and Eigenvectors	124
4.19	The Power Method	125
4.20	Finding Additional Eigenvalues	127
4.21	Summary	138
	Problems	139
	References	142

Chapter 5 Interpolation and Numerical Integration 145

5.1	Introduction	146
5.2	Divided Differences	147
5.3	Newton's Divided-difference Formula	149
5.4	The Forward-difference Interpolation Formula	154
5.5	The Backward-difference Interpolation Formula	157
5.6	Approximate Integration Formulas	159
5.7	Trapezoidal Formula for Integration	161
5.8	Simpson's Integration Formula	166
5.9	Other Closed-end Integration Formulas	169
5.10	Open-end Integration Formulas	171
5.11	Comparison of Integration Formulas	172
5.12	Summary	173
	Problems	174
	References	175

Chapter 6 Initial-value Problems 177

6.1	Introduction	178
6.2	The First-order Differential Equations	179
6.3	The Crude Euler Method	180
6.4	The Corrected Euler Method	182
6.5	Predictor Formulas	187
6.6	Corrector Formulas	190

6.7	Euler Predictor-Corrector Method	192
6.8	Modified Euler Predictor-Corrector Method	193
6.9	Adams-Bashforth Predictor-Corrector Method	198
6.10	Modified Adams-Bashforth Predictor-Corrector Method	200
6.11	Starting Values for Predictor-Corrector Methods	202
6.12	Runge-Kutta Methods	202
6.13	A Fourth-order Runge-Kutta Method	205
6.14	Systems of Differential Equations	208
6.15	Higher-order Differential Equations	213
6.16	Stability of the Methods for Solving the Initial-value Problem	215
6.17	Comparison of Methods	217
6.18	Summary	218
	Problems	219
	References	221

Chapter 7 Finite Differences and Boundary-value Problems 223

7.1	Introduction	224
7.2	Finite-difference Approximations for Derivatives	225
7.3	Finite-difference Analog	226
7.4	Difference Analog for Higher-order Differential Equations	233
7.5	Solution of the Difference Analog	239
7.6	Partial Differential Equations	250
7.7	Accuracy of the Finite-difference Method	258
7.8	Conclusion	259
7.9	Summary	259
	Problems	259
	References	262

Chapter 8 Data Approximation 263

8.1	Introduction	264
8.2	Data Problem in Two Variables	265
8.3	An Approximate Function to a Data Record	265
8.4	Method of Collocation	268
8.5	Least-squares Approximation	268

8.6	The Least-squares Polynomial	281
8.7	Some Comments on Least-squares Polynomials	283
8.8	A Measure of Fit	286
8.9	Summary	289
	Problems	290
	References	291
