

# CONTENTS

## *Chapter 1 You and Physical Science*

SECTION	1-1	About This Course	2
	1-2	The Scientist as a Detective	5
	1-3	Observation and Sherlock Holmes	5
	1-4	Asking Answerable Questions	12
	1-5	Classification	13
	1-6	Summary	16
EXPERIMENT	1-1	The Salol Experiment	8
	1-2	Solution of Powders	9
	1-3	Formation and Dissolving of Crystals	11
	1-4	Classification of Objects	16

## *Chapter 2 When, Where, and How Much?*

SECTION	2-1	A Controlled Environment, the Laboratory	20
	2-2	How Much?	22
	2-3	When?	28
	2-4	How Hot?	28
	2-5	How Much Heat?	33
EXPERIMENT	2-1	Making Measurements	27
	2-2	Observations of Dissolving Solids	29
	2-3	A Thermal Illusion	30
	2-4	The Temperature Sensitivity of the Hand	30
	2-5	Heat Transfer from Different Substances	34
	2-6	A Study of Temperature Change during Cooling	35
	2-7	A Closer Look at the Plateau	37

## *Chapter 3 A Look at Light*

SECTION	3-1	Light and Solid Matter	44
	3-2	Color	46
	3-3	Mechanical Waves	50
	3-4	The Wave Model of Light	56
EXPERIMENT	3-1	A Chemical Reaction Produced by Light	44
	3-2	Colored Objects	47
	3-3	Breaking up White Light	47
	3-4	Water Waves	52
	3-5	Waves in a Spring	53

## *Chapter 4 Interference of Light*

SECTION	4-1	Interference	62
	4-2	Superposition of Waves	66
	4-3	Interference Revisited	73
EXPERIMENT	4-1	Young's Double-Slit Experiment	63
	4-2	Measuring the Wavelength of Light	83
	4-3	Measuring the Separation of Wires in a Wire Mesh	86

## *Chapter 5 Crystals In and Out of the Laboratory*

SECTION	5-1	Crystal Growth	94
	5-2	Harvesting Your Home-Grown Crystals	95
	5-3	Harvesting Crystals Grown in Nature	100
	5-4	Breaking Crystals	103
EXPERIMENT	5-1	Salt and Sugar	97
	5-2	Packing of Spheres	99
	5-3	Cleaving Crystals	103

## *Chapter 6 What Happened in 1912*

SECTION	6-1	The Story	112
	6-2	The Nature of Diffraction	113
	6-3	The Idea	117
	6-4	The Experiment	117
	6-5	Diffraction from a Regular Array of Objects	120

## *Chapter 7 Matter: A Closer Look at Differences*

SECTION	7-1	The Need to Question	130
	7-2	Another Way to Explore Differences	132
	7-3	Comparison of Solids, Liquids, and Gases	140
	7-4	Alternative Models of a Gas	143
	7-5	Which Model Shall We Choose?	144
	7-6	Volume Changes of a Gas	146
EXPERIMENT	7-1	The Distillation of Wood	133
	7-2	Effect of Heat on Various Solids	136
	7-3	The Vaporization of a Liquid	142
	7-4	Effect on a Gas of a Change in Temperature	146

## *Chapter 8 Matter in Motion*

SECTION	8-1	Some Simple Kinds of Motion	154
	8-2	Forces	159
	8-3	Force, Mass, and Acceleration	170
	8-4	The Motion of a Falling Object	180
EXPERIMENT	8-1	Motion of Objects on a Horizontal Surface	155
	8-2	Acceleration of Falling Objects	167
	8-3	Force and Motion	172

## *Chapter 9 Energy*

SECTION	9-1	Work	187
	9-2	Kinetic Energy	188
	9-3	The Principle of Conservation of Energy	191
	9-4	Potential Energy	192
	9-5	Thermal Energy	198
	9-6	In Support of the Principle of Conservation of Energy	201
EXPERIMENT	9-1	Conservation of Mechanical Energy	207

## *Chapter 10 The Kinetic Theory of Gases*

SECTION	10-1	Molecules and Gas Pressure	214
	10-2	Molecules, Temperature, and Pressure	217
EXPERIMENT	10-1	The Relation between the Temperature and Pressure of a Gas	217

## *Chapter 11 Bonding Forces within a Crystal*

SECTION	11-1	Strength of a Crystal	230
	11-2	On Understanding	232
	11-3	Requirements for the Bonding Force	232
	11-4	Kinds of Forces	235
	11-5	Gravitational Forces Examined	235
	11-6	Magnetic Forces Examined	240
	11-7	Electrical Forces Examined	240
	11-8	Behavior of Charges in Materials	248
	11-9	A Review and Extension	253
EXPERIMENT	11-1	An Introduction to Electrical Forces	241
	11-2	An Investigation of Types of Electric Charges	243
	11-3	An Investigation of Transfer of Electric Charges through Various Materials	250

## *Chapter 12 Electric Charges in Motion*

SECTION	12-1	The Microscopic and the Macroscopic Views of Electric Charge	258
	12-2	An Electric Circuit	259
	12-3	Electric Current and Potential Difference	264
	12-4	Energy and Power in an Electric Circuit	267
	12-5	What Determines the Current in a Conductor?	269
	12-6	The Conductivity of Materials	274
	12-7	A Preliminary Microscopic Model of Conduction in Solids	279
EXPERIMENT	12-1	Production of a Flow of Electric Charges	259
	12-2	A Simple Electric Circuit	262
	12-3	Using an Electric Circuit to Study Materials	270
	12-4	A Mechanical Analogue to Conduction in Solids	281

## *Chapter 13 Models of Atoms*

SECTION	13-1	The Beginnings	287
	13-2	Rutherford's Scattering Experiments	293
	13-3	Atomic Mass	306
	13-4	Spectra and Energy Levels	314
	13-5	Removing Electrons from Atoms	319
	13-6	The Shell Model and Cloud Model of the Atom	322
EXPERIMENT	13-1	Determining the Size of an Object from Collision Probabilities	299
	13-2	Determination of the Atomic Mass of Magnesium	308
	13-3	Observation of Various Spectra	314

## *Chapter 14 Ions*

SECTION	14-1	A Look Back and a Look Forward	330
	14-2	Ions in Melts	331
	14-3	Introduction to the Use of Chemical Equations	337
	14-4	Ions in Solution	340
	14-5	Electrolysis of Solutions	341
	14-6	Chemical Properties of Ions and Atoms	347
	14-7	Behavior of Ions	348
	14-8	Replacement of Ions	349
	14-9	Combination	351
	14-10	Oxidation and Reduction	356
	14-11	Cells	358

EXPERIMENT	14-1	The Effect of an Electric Current on Lead Chloride	332
	14-2	Migration of Ions	340
	14-3	Electrolysis of Lead Nitrate and Sodium Chloride	342
	14-4	Replacement of Ions	349
	14-5	Combining Zinc and Iodine	351
	14-6	An Electric Current by Electron Transfer	358

## *Chapter 15 The Nature of an Ionic Crystal*

SECTION	15-1	Preliminary Steps in Determining the Structure of a Crystal	365
	15-2	Use of X-Ray Diffraction in Determining the Structure of a Crystal	370
	15-3	The Structure of Cesium Chloride	380
	15-4	The Structure of Sodium Chloride	386
	15-5	Sizes of Ions	390
	15-6	The Mass of an Atom and Avogadro's Number	395
	15-7	Crystal Forces and Potential Wells	398
	15-8	Melting, Dissolving, and Equilibrium	408
	15-9	Entropy	411
EXPERIMENT	15-1	Crystals of Sodium Chloride and Cesium Chloride	366
	15-2	Construction of a Model of Cesium Chloride	383
	15-3	Construction of a Model of Sodium Chloride	388
	15-4	Water in an Electric Field	408
	15-5	The Law of Entropy	415

## *Chapter 16 Molecules*

SECTION	16-1	An Attempt to Electrolyze Water	421
	16-2	Combining Hydrogen and Oxygen	425
	16-3	Combining Volumes	426
	16-4	Avogadro's Hypothesis	428
	16-5	Diatomic Molecules	429
	16-6	Bonds in Molecules	430
	16-7	Summary	448
EXPERIMENT	16-1	Electrolysis of Water	421
	16-2	Combining Hydrogen and Oxygen	425
	16-3	Model for Carbon Bonding	440

## Chapter 17 Nonionic Materials

SECTION	17-1	The Structure of Diamond	452
	17-2	Other Carbon Compounds	455
	17-3	Graphite	459
	17-4	Loosely Bonded Crystals	461
	17-5	Hydrogen Bonding	464
	17-6	Metals	467
	17-7	Packing in Metal Crystals	469
	17-8	Applying the Metal Model	470
	17-9	A Comparison of Crystal Bond Types	471
	17-10	Sulfur—A Solid That Is Sometimes Noncrystalline	472
	17-11	Glass	476
	17-12	Properties of a Linear Polymer	478
	17-13	Rubber-Network Polymers	481
	17-14	Mixtures	484
	17-15	Conclusion	487
EXPERIMENT	17-1	Electrical Properties of Two Fluids	457
	17-2	Mechanical Properties of Metals	467
	17-3	Physical Properties of Sulfur	473
	17-4	A Model of Sulfur	474
	17-5	Experiments with Glass	476
	17-6	Experiments with Polyethylene	479
	17-7	An Experiment with Rubber	482

## Chapter 18 What It Is All About

<i>Appendix A</i>	Review of Powers of Ten	499
<i>Appendix B</i>	Graphs	506
<i>Appendix C</i>	Periodic Table	524
<i>Index</i>		525
