Chapter 1. Equations of Plane Motion 1

1. Introduction. 2. Historical Note. 3. Relation of Kinematics to Engineering. 4. Plane Motion. 5. Vector Quantities. 6. Adding and Subtracting Vectors. 7. Speed and Velocity. 8. Example—Converting Units. 9. Example—Uniform Motion. 10. Acceleration. 11. Equations and Graphs for Constant Acceleration. 12. Example—Constant Acceleration. 13. Example. 14. Jerk. 15. Angular Motion. 16. Relations between Linear and Angular Motion Equations. 17. Velocity Ratio. 18. Slider-crank Mechanism. 19. Example. 20. Curvilinear Motion. 21. Tangential and Normal Accelerations. 22. Example. 23. Harmonic Motion. 24. Example—Harmonic Motion. 25. Nonplanar Motion. 26. Closure. Problems.

Chapter 2. Cams 29

27. Introduction. 28. Types of Cams. 29. Definitions. 30. Motions Used for Cam Curves. 31. Methods of Drawing Cam Profiles. 32. Constant Acceleration. 33. Example—Radial Follower, Constant Acceleration. 34. Pressure Angle. 35. Computing the Pressure Angle. 36. Example—Pressure Angles. 37. Harmonic Motion. 38. Example—Disk Cam, Flat-face Follower, Harmonic Motion. 39. The Case against Infinite Jerk. 40. Laying out Cycloidal Motion. 41. Offset Roller Follower. 42. Example—Cam with Offset Follower; Cycloidal Motion. 43. Uniform Motion for Cams. 44. Combination of Constant Acceleration and Constant Velocity. 45. Oscillating and Secondary Followers. 46. Example—Disk Cam with Oscillating Follower. 47. Other Motions Used in Cam Mechanisms. 48. Effect of Size of Base Circle. 49. Special Forms of Cams. 50. Inverse Cams. 51. Positive-motion Cams. 52. Cylindrical Cams. 53. Example—Theoretical Curve for Cylindrical Cam. 54. Cylindrical Cam with Oscillating Follower 55. Miscellaneous Remarks on Cams. 56. Closure. Problems.

Chapter 3. Centros and Velocities 80

57. Introduction. 58. Pairs and Their Representations. 59. Constraint. 60. Centro. 61. Location of Primary Centros. 62. Kennedy's Theorem. 63. Number of Centros in a Kinematic Chain. 64. Centro for Two Rotating Bodies Which Slide in Contact. 65. Example—Locating Centros. 66. Remarks on Finding Centros. 67. Example—Centros for Slider-crank Chain. 68. Example—Centros in a Six-link Mechanism. 69. Relative Motion. 70. Velocities by Centro Method. 71. Example—Velocities by Line-of-centers Method. 72. Example—Velocities by the Link-to-link Construction. 73. Examples—Velocities by Centro Method. 74. Instantaneous Angular Velocities. 75. Inversion. 76. Dead-center Positions. 77. Forms of Four-bar Mechanisms. 78. Quick-return Mechanisms. 79. Toggle Links. 80. Straight-line Mechanisms. 81. Parallel-motion Mechanism. 82. Elliptic Trammel. 83. Centrode. 84. Closure. Problems.

Chapter 4. Relative Velocities 127

85. Introduction. 86. Relative Velocity of Coincident Points in Two Bodies, Plane Motion. 87. Example—Velocities at a Sliding Connection. 88. Relative Velocity of Two Points in a Rigid Body, Plane Motion. 89. Velocity Polygons. 90. Example—Cam Mechanism. 91. Example—Whitworth Quick Return. 92. Example—Oscillating Cylinder. 93. Example—Rolling Wheel. 94. Relative Angular Velocity. 95. Closure. Problems.

Chapter 5. Velocity Diagrams 149

96. Introduction. 97. Velocity Diagram of a Slider-crank Mechanism. 98. Polar Velocity Diagrams. 99. Velocity Diagram—Whitworth Quick-return Mechanism. 100. Closure. Problems.

Chapter 6. Relative Accelerations 158

101. Introduction. 102. Review of Basic Acceleration Equations. 103. Relative Acceleration for Points Fixed in a Rigid Body. 104. Example—Rotating Disk. 105. Example—Accelerations in Rolling Wheel. 106. Example—Acceleration in Four-bar Mechanism. 107. Relative Angular Accelerations. 108. Example—Planetary Gears. 109. Equivalent Mechanisms. 110. Closure. Problems.

Chapter 7. Spur Gears 179

111. Introduction. 112. Definitions. 113. Law of Gearing. 114. Involute Curve Satisfies the Law of Gearing. 115. Line of Action and Pressure Angle. 116. Properties of Involute Profiles. 117. Pitch. 118. Interchangeable Involute Systems. 119. Interference of Involute Teeth. 120. Action of Gear Teeth. 121. Angles of Approach, Recess, and Action. 122. Contact Ratio. 123. Computing the Length of Action. 124. Reducing Interference Difficulties. 125. (a) Example—To Find Minimum Number of Teeth on Pinion for No Interference. (b) Example—To Find the Maximum Addendum on Gear for No Interference. 126. The Involute Rack. 127. Internal Gear and Pinion. 128. Sliding Velocity of Gear Teeth. 129. Manufacture of Gear Teeth. 130. The Cycloidal System. 131. Closure. Problems.

Chapter 8. Helical, Bevel, and Worm Gearing 225

132. Introduction. 133. Helical Gears. 134. Normal Pressure Angle for Helical Gears. 135. Herringbone Gears. 136. Crossed Helicals. 137. Sliding

Velocity, Crossed Helicals. 138. Example—Crossed Helicals. 139. Bevel Gears. 140. Gleason System of Straight Bevels. 141. Types of Bevel Gears. 142. Worm Gearing. 143. Closure. Problems.

Chapter 9. Gear Trains 252

144. Introduction. 145. Train Value. 146. Idler Gears. 147. Example. 148. Illustrations of Gear Trains. 149. Gear Trains for a Given Velocity Ratio. 150. Planetary Gear Trains. 151. Example. 152. Reverted Planetary Trains and Balancing Centrifugal Forces. 153. Example—Planetary Train with Bevel Gears. 154. Bevel-gear Differential. 155. Automatic Transmission. 156. Closure. Problems.

Chapter 10. Flexible Connectors and Friction Wheels 277

157. Introduction. 158. Flat Belts. 159. Length of Flat Belts. 160. V-belt Drives. 161. Timing Belt. 162. Roller Chains. 163. Chordal Action of Chains. 164. Inverted-tooth Chains. 165. Friction Drives. 166. Variable-speed Drives. 167. Hoisting Tackle. 168. Closure. Problems.

Chapter 11. Miscellaneous Devices 299

169. Introduction. 170. Ratchets. 171. Masked Ratchet. 172. Silent Ratchet. 173. Universal Joints.

Appendix 307

174. Suggestions on Graphical Solutions. 175. Degrees to Radians. 176. Areas under Curves. 177. Dividing a Line into Parts of Any Proportion. 178. Basic Racks for Gear-tooth Systems. 179. Drawing an Involute. 180. Drawing Gear Teeth. 181. Drawing Cycloidal Curves. 182. Layout of Rolling Cones. 183. Drawing Teeth on Bevel Gears—Tredgold's Approximation.
