

Table of contents

1. MECHANICS

1.1 Statics

- 1.1.1 Caliper vernier, Micrometer, Spherometer
- 1.1.2 Moments
- 1.1.3 Modulus of elasticity
- 1.1.4 Mechanical hysteresis

1.2 Dynamics

- 1.2.1 Newton's Laws
- 1.2.2 Free fall
- 1.2.3 Moment of inertia and angular acceleration
- 1.2.4 Steiner's theorem
- 1.2.5 Moments of inertia and torsional vibrations
- 1.2.6 Torsional vibrations and torsion modulus
- 1.2.7 Mathematical pendulum
- 1.2.8 Laws of gyroscopes
- 1.2.9 Moment and angular momentum
- 1.2.10 Centrifugal force
- 1.2.11 Projection of a body at an angle to the horizontal
- 1.2.12 Mechanical conservation of energy
- 1.2.13 Laws of collision I
- 1.2.14 Laws of collision II
- 1.2.15 Foucault's Pendulum
- 1.2.16 Forced Oscillations
- 1.2.17 Coupled Pendula
- 1.2.18 Torques and Decomposition of Forces

1.3 Mechanics of liquids and gaseous bodies

- 1.3.1 Determination of the density of liquids
- 1.3.2 Surface of rotating liquids
- 1.3.3 Viscosity of Newtonian and non-Newtonian liquids (rotary viscometer)
- 1.3.4 Viscosity measurement with the falling-ball viscometer
- 1.3.5 Hagen-Poiseuille Law
- 1.3.6 Determination of surface tension by the ring method (Du Nouy Method)
- 1.3.7 Capillary effect and surface tension
- 1.3.8 Density and humidity of air
- 1.3.9 Barometric height formula
- 1.3.10 Drag (resistance to flow)
- 1.3.11 Lift and drag

1.4 Mechanical vibration acoustics

- 1.4.1 The vibration of strings
- 1.4.2 Determination of the velocity of sound using Kundt's tube
- 1.4.3 Optical determination of the velocity of sound in liquids
- 1.4.4 Phase and group velocity of ultrasonics in liquids
- 1.4.5 Temperature dependence of velocity of sound in liquids
- 1.4.6 Determination of wavelengths and frequencies with the Quincke tube

2. OPTICS

- 2.1 Measuring the velocity of light
- 2.2 Laws of lenses and optical instruments
- 2.3 Dispersion and resolving power of the prism
- 2.4 Transmission of colour filters
- 2.5 Interference of light
- 2.6 Newton's rings
- 2.7 Diffraction at a slit and Heisenberg's uncertainty principle
- 2.8 Diffraction of light at a slit and an edge
- 2.9 Michelson interferometer
- 2.10 Polarisation by quarterwave plates
- 2.11 Polarimetry
- 2.12 The microscope
- 2.13 Faraday Effect
- 2.14 Interference at a Mica Plate (according to Pohl)

3. THERMODYNAMICS

- 3.1 Thermal and electrical conductivity of metals
- 3.2 Equation of state of ideal gases
- 3.3 Thermal equation of state and critical point
- 3.4 Thermal expansion
- 3.5 Vapour pressure of water at high temperature
- 3.6 Heat capacity of metals
- 3.7 Heat capacity of gases
- 3.8 Determination of the Adiabatic Coefficient of Gases
- 3.9 Solar ray Collector
- 3.10 Electric Compression Heat Pump
- 3.11 Heat insulation
- 3.12 Determination of combustion enthalpy
- 3.13 Elevation of boiling point
- 3.14 Determination of diffusion potentials, Nernst equation
- 3.15 The Joule-Thomson coefficients of CO_2 and N_2
- 3.16 Maxwellian velocity distribution
- 3.17 Stefan-Boltzmann's Law of Radiation

4. ELECTRICITY

4.1 Electrostatics and magnetostatics

- 4.1.1 Electrical fields and potentials in the plate capacitor
- 4.1.2 Charging curve of a condenser
- 4.1.3 Coulomb's Law, Image Charge

4.2 Stationary currents

- 4.2.1 Measurement of low resistance
- 4.2.2 Internal resistance and matching in voltage sources
- 4.2.3 Semiconductor thermogenerator
- 4.2.4 Peltier heat pump
- 4.2.5 Characteristics curves of semiconductor components

4.2.6	Characteristic curves of a solar cell	5.1.4	Two-electron spectra with the prism spectrometer
4.2.7	Characteristic curves of electron tubes (diode, triode)	5.1.5	The Franck-Hertz experiment
4.2.8	Magnetic field of single coils	5.1.6	X-ray absorption and Moseley's Law
4.2.9	Magnetic field of paired coils in Helmholtz arrangement	5.1.7	Magnetic susceptibility of solutions (Quincke)
4.2.10	The Wheatstone Bridge	5.1.8	X-ray fluorescence and Moseley's Law
4.2.11	Magnetic moment in the magnetic field	5.1.9	The Zeemann Effect
4.2.12	Magnetic field outside a straight conductor	5.2	Nuclear physics and elementary particles
4.2.13	Magnetic field inside a conductor	5.2.1	Half-life and radioactive equilibrium
4.2.14	The DC machine as motor and generator	5.2.2	Activation and decay of rhodium
4.2.15	Determination of the Faraday constant	5.2.3	Half-life of radioactive silver isotopes
4.2.16	Determination of charges and electrochemical equivalents	5.2.4	Law of distance and absorption of γ -rays
4.2.17	Current balance	5.2.5	Coincidence of events in the detection of radioactive radiation
4.2.18	Lorentz disk	5.2.6	Elementary charge and Millikan experiment
4.3	Electrodynamics	5.2.7	Specific charge of the electron
4.3.1	RC Filters	5.2.8	Planck's „quantum of action“
4.3.2	Rectifier circuits	5.2.9	Determination of Planck's „quantum of action“ from photoelectric effect
4.3.3	RLC measuring bridge	5.2.10	Energy loss of α -particles in gases
4.3.4	Coupled oscillating circuits	5.2.11	Stern-Gerlach experiment
4.3.5	Interference of microwaves	5.2.12	Compton effect
4.3.6	Diffraction of microwaves	5.2.13	Study of the α -energies of various emitters
4.3.7	Capacitor in the AC circuit	5.2.14	Fine structure of the α -spectrum of ^{241}Am
4.3.8	Coil in the AC circuit	5.2.16	Internal conversion $^{137\text{m}}\text{Ba}$
4.3.9	High-pass and low-pass filters	5.2.17	β -spectroscopy
4.3.10	RLC Circuit	5.2.18	Study of Rutherford scattering by gold and aluminium
4.3.11	Inductance of solenoids	5.2.19	Cross-section for photoelectric effect and Compton scattering
4.3.12	Magnetic induction	5.2.20	Electron Absorption
4.3.13	The Transformer	5.2.21	Energy Dependence of the γ -absorption Coefficient
4.4	Electronics	5.2.22	γ -spectroscopy
4.4.1	HF oscillators with semiconductors	5.2.23	Examination of the Ra^{226} γ -spectrum in Equilibrium with its Desintegration Products
4.4.2	Operational amplifier I		
4.4.3	Operational amplifier II		
4.4.4	Small signal amplification by transistors		
4.4.5	Construction of a digital counter		
5.	PHYSICAL STRUCTURE OF MATTER	5.3	Solid-state physics
5.1	Physics of the orbital electrons	5.3.1	Electron diffraction
5.1.1	Electron spin resonance	5.3.2	Hall Effect in p-germanium
5.1.2	Fine structure and one-electron spectrum	5.3.3	Hall Effect in n-germanium
5.1.3	Atomic spectra of two-electron system: He, Hg	5.3.4	Energy gap of germanium
		5.3.5	Hall Effect in Metals
		5.3.6	X-ray spectrum and Bragg reflection
