

CONTENTS № 2705

Chapter 1 BASIC DEFINITIONS, DETERMINANTS, AND LINEAR ALGEBRAIC EQUATIONS 1

1.1. Introduction	1
1.2 Determinants of the Second Order	1
1.3 Properties of Determinants	2
1.4 Multiplication of Determinants.	2
1.5 Two Simultaneous Linear Algebraic Equations in Two Unknowns	3
1.6 Determinants of the n th Order	4
1.7 Expansion of Determinants of the n th Order	5
1.8 Fundamental Properties of Determinants	6
1.9 Method of Chiò for Evaluating Determinants	8
1.10 The Solution of Linear Equations by Determinants, Cramer's Rule	12
1.11 n Homogeneous Equations in n Unknowns	14
1.12 Gauss' Method of Elimination in Solving Simultaneous Equations	15
1.13 Triangulation Method in the Solution of Simultaneous Equations	16

Chapter 2 MATRIX ALGEBRA, SIMULTANEOUS EQUATIONS 22

2.1 Introduction	22
2.2 Definitions and Notation	22
2.3 Elementary Operations on Matrices	23
2.4 Multiplication of Matrices	24
2.5 Partitioned Matrices and Partitioned Multiplication	26
2.6 Matrix Division; the Inverse Matrix	28
2.7 Solution of Simultaneous Equations by Matrix Inversion	31
2.8 Augmented Matrix Method of Matrix Inversion	32
2.9 Gauss-Seidel Method of Solving Simultaneous Equations	38
2.10 Representation of Vectors by Matrices	41
2.11 Coordinate Transformation Using Matrices	43

2.12	The Vector Product of Two Vectors	44
2.13	Linear Dependence of Vectors	46
2.14	Linear Independence of Vectors and the Gram Determinant	48
Chapter 3 EIGENVALUES, EIGENVECTORS, AND QUADRATIC FORMS		55
3.1	Introduction	55
3.2	The Eigenvector (Characteristic Vector) Equation	55
3.3	Fundamental Properties of the Characteristic Polynomial of Matrix A	59
3.4	Properties of the Eigenvectors of a Square Matrix	62
3.5	The Case of Repeated Eigenvalues	66
3.6	Matrix Iteration Method of Evaluating Eigenvalues and Eigenvectors	69
3.7	Iteration Method for Obtaining the Smallest Characteristic Values and Vectors	76
3.8	Use of Orthogonality Relations in Obtaining Characteristic Values and Vectors	77
3.9	The Method of A. M. Danilevsky for Obtaining the Characteristic Equation	81
3.10	Characteristic Vector by the Method of A. M. Danilevsky	88
3.11	The Relation Between the Eigenvectors and Eigenvalues of a Matrix and Those of Its Transpose	89
3.12	The Gram-Schmidt Orthogonalization Process	90
3.13	The Modal Matrix and the Quadratic Forms	91
Chapter 4 FUNCTIONS OF MATRICES; MATRIX CALCULUS AND MATRIX DIFFERENTIAL EQUATIONS		99
4.1	Introduction	99
4.2	Polynomials in a Square Matrix, with Scalar Coefficients	99
4.3	Power Series of Matrices	100
4.4	Matrix Functions	101
4.5	Some Properties of the Matrix Exponential Function	101
4.6	Rational Functions of Matrices	103
4.7	Eigenvalues of Rational Functions of Matrices (Frobenius's Theorem)	103
4.8	The Cayley-Hamilton Theorem	104
4.9	The Reduction of Matrix Polynomials	106
4.10	Reduction of Functions of Matrices	107
4.11	Reduction of Functions of n th order Matrices	110
4.12	Reduction of Polynomials and Functions of Matrices with Multiple Eigenvalues	112

4.13	Differentiation and Integration of Matrices	112
4.14	Simultaneous Linear Differential Equations of the First Order with Constant Coefficients	114
4.15	Solution of a Homogeneous Set of Linear Differential Equations of the Second Order	116
4.16	Simultaneous Linear Differential Equations of the First Order with Variable Coefficients	117
4.17	The Determination of the Transition Matrix by the Method of Picard	119
4.18	Computation of the Transition Matrix $P(t)$	122
4.19	Certain Numerical Methods for the Determination of the Transition Matrix $P(t)$	123
4.20	The Method of Mean Coefficients for Evaluating $P(t)$	127
4.21	A Perturbation Method for the Determination of the Transition Matrix $P(t)$	129
4.22	A Method for the Computation of the Transition Matrix $P(t)$ for a Constant Matrix A	131

Chapter 5 ELECTRICAL APPLICATIONS OF MATRICES 141

5.1	Introduction	141
5.2	Fundamental Principles	141
5.3	The General Circuit on a Loop Basis	143
5.4	The Laplace Transform	146
5.5	The General Solution of the Loop Equations	150
5.6	The Single-Loop Case	152
5.7	The Steady-State Solution of the n -Loop Circuit; Alternating Currents	155
5.8	The Nodal Equation of the General Network	156
5.9	Four-Terminal Networks in the Alternating Current Steady State	160
5.10	Reversed Four-Terminal Networks	162
5.11	The Series Interconnection of Four-Terminal Networks	163
5.12	Wave Propagation Along a Series of Four-Terminal Networks	166
5.13	Wave Propagation Along a Series of Reversible Structures	170
5.14	Elementary Filter Circuits	172
5.15	Steady-State Analysis of Two-Conductor Transmission Lines	176

Chapter 6	TIME-FREQUENCY DOMAIN ANALYSES AND THE FAST FOURIER TRANSFORM	182
6.1	Introduction	182
6.2	Discrete Fourier Transform	183
6.3	Matrix Calculation of Fourier Transforms	187
6.4	Numerical Examples	190
6.5	Computer Program for the Calculation of the Fourier Transform	194
6.6	Cooley-Tukey Method	197
6.7	Discussion of Fourier Transforms	201
6.8	Electric Circuit Analysis in the Time Domain	202
6.9	The Free Oscillations of the Circuit	203
6.10	Solution in Terms of Functions of Matrices	206
6.11	The General Case, Forced Oscillations	208
Chapter 7	FORMULATION OF VIBRATION PROBLEMS (CONSERVATIVE SYSTEMS)	213
7.1	Introduction	213
7.2	System with One Degree of Freedom	213
7.3	Free Vibrations of Systems with Two Degrees of Freedom	217
7.4	The Free Oscillations of a Linear Conservative System with n Degrees of Freedom	225
7.5	Normal Coordinates in the Case of n Degrees of Freedom	229
7.6	Examples of the General Theory	230
7.7	The Modal Matrix and the Normal Coordinates	233
7.8	The Case of Zero Frequency	235
7.9	Use of Matrix Iteration in Determining the Frequencies and Modes of Oscillation of Linear Conservative Systems	238
7.10	Numerical Example of the Iteration Procedure	241
7.11	Determination of the Higher Modes; the Sweeping Matrix	244
7.12	Numerical Example: the Triple Pendulum	247
Chapter 8	FORMULATION OF VIBRATION PROBLEMS (NONCONSERVATIVE SYSTEMS)	258
8.1	Introduction	258
8.2	The Reduced Equations	259
8.3	Separated Coordinates	262

8.4	The Forced Oscillations	262
8.5	The Analysis of a Class of Symmetric Damped Linear Systems	263
8.6	Matrix Iteration Method for Damped Vibrations.	265
8.7	Determination of the Frequencies and Modes	267
8.8	Completion of the Solution	271
8.9	Transformation of the Equations of Motion and Normal Coordinates	273
8.10	Remarks on Numerical Procedures	274
8.11	Numerical Example	274
8.12	The Routh-Hurwitz Stability Criterion	280

Chapter 9 STRUCTURAL APPLICATION OF MATRICES 284

9.1	Introduction	284
9.2	Stiffness and Flexibility Matrices	284
9.3	Equations of Motion	292
9.4	Internal Forces, Deformation, and Internal Energy	294
9.5	Matrix Force Method of Calculating Stiffness and Flexibility Matrices	297
9.6	Basic Theory of Matrix Force Method	297
9.7	Method of Computing Matrix X	304
9.8	Procedure for the Calculation of Internal Forces, Deformations, and Flexibility Matrix Using Matrix Force Method	306
9.9	Displacement Method of Calculating the Stiffness Matrix	313
9.10	Partitioning of the Stiffness Matrix	318
9.11	Analogy between the Force Method and the Displacement Method	322
