Preface to Reprint
Preface

Chapter 1 Basic Ideas of Newtonian Mechanics and Galilei-newtonian Relativity	1
1-1 Physical Space; Newton's Absolute Space; Euclidean Geometry	2
1-2 Mathematical Euclidean Space; The Group of Displacements; Relativity of Position	5
1-3 Physical Time; Newton's Absolute Time; Absolute Simultaneity	10
1-4 The Metric of Time and the Galilei-newtonian Principle of Inertia	12
1-5 Newton's Second and Third Laws; Definitions of Force and of Inertial Mass	13
1-6 Galilei-newtonian Relativity	16
<i>Appendix 1A Transformation Groups and Form Invariants</i>	17
Problems	20
Chapter 2 Historical Preliminaries	23
2-1 Electrodynamics of Moving Media and the Luminiferous Ether	24
2-2 The Relativistic Equations of Lorentz and Poincaré Problems	27 32

Chapter 3 Einstein's Special Theory of Relativity and its Basic Kinematic Results			37
3-1 Einstein's Derivation of the Lorentz Transformation Equations; Relativity of Time and Space	38	3-4 The General Lorentz Transformations and Minkowski Geometry	51
3-2 An Alternative Derivation of the Lorentz Transformations; Composition of Velocities	43	3-5 The Clock Paradox; Thomas Precession	63
3-3 Applications of Relativistic Kinematics; Experimental Checks of Time Dilatation	46	Appendix 3A Continuous Groups and Infinitesimal Transformations	67
		Appendix 3B A General Derivation of the Group G	77
		Problems	78
Chapter 4 Relativistic Mechanics			49
4-1 Relativistic Equations of Motion of a Particle in a Given Field of Force	90	Formalism	100
4-2 Particle Collisions and Relativistic Mechanics; Center of Mass	93	4-4 Applications of Relativistic Mechanics; Einstein's Mass-Energy Formula	110
4-3 Variational Principles in Classical and Relativistic Mechanics; Canonical		Problems	119
Chapter 5 Tensor Analysis in Flat Spaces			131
5-1 Group Representations and Tensors	132	Considerations; Pseudotensors	148
5-2 Tensor Algebra	135	5-5 Tensor Analysis in Flat Spaces	156
5-3 Metric Considerations; General Coordinates	140	Appendix 5A Finite-dimensional Vector Spaces	162
5-4 Further Algebraic and Geometric		Problems	164
Chapter 6 Relativistic Mechanics of Continuous Media			171
6-1 Elements of Classical Mechanics of Continuous Media	172	Fluids	192
6-2 Relativistic Equations for Continuous Media	178	6-6 Further Remarks Concerning Continuous Systems; Elements of Relativistic Thermodynamics	196
6-3 Integral Conservation Laws	187	6-7 Variational Formulation of the Mechanics of Continuous Media	207
6-4 Theory of the Trouton-Noble Experiment	190	Problems	209
6-5 Relativistic Mechanics of Perfect			
Chapter 7 The Electromagnetic Field			221
7-1 Covariant Formulation of the Maxwell-Lorentz Equations	222	7-5 The General Classical Problem of the Motion of Charged Particles in a Given Electromagnetic Field	271
7-2 Variational Formulation of the Maxwell-Lorentz Theory	228	Appendix 7A Relativistic Action-at-a-distance Theories	283
7-3 Relativistic Formulation of Electrodynamics in Continuous Material Media	236	Appendix 7B Theories of Gravitation Within the Framework of Special Relativity	289
7-4 Electromagnetic Field of a Charged Particle of Given Motion	252	Problems	301

Chapter 8 Relativity and Quantum Mechanics	313
8-1 Historical Note	314
8-2 Spinors	324
8-3 Relativistic Wave Equations	331
8-4 A Note on the Postulate of Relativity in Elementary particle Physics	350
<i>Appendix 8A</i> Group Representations	360
<i>Appendix 8B</i> Representations of the Homogeneous Lorentz Group	379
<i>Appendix 8C</i> Unitary Representations of the Inhomogeneous Lorentz Group	389
Problems	400
Answers to Selected Problems	409
Bibliography	441
Name Index	443
Subject Index	449
