PART 1 CALCULUS OF VARIATIONS

1.	Introduction to optimisation theory and the calculus of variations	1
1.1	Introduction	1
1.2	Optimisation in two dimensions	2
1.3	Optimisation in n -dimensions	14
1.4	Calculus of variations	21
1.5	Summary	34
2.	Matched filter receivers	37
2.1	Introduction	37
2.2	Optimal pulse detection	38
2.3	Optimal pulse location	40
2.4	Pulse location with low false alarm probability	42
2.5	Conclusions	43
3.	Chernoff bound detection filters	45
3.1	Introduction	45
3.2	Binary detection of a Poisson process	46
3.3	The Chernoff bound	49
3.4	The binary optical receiver	52
3.5	A variational solution	57
4.	Realisable filters with minimal intersymbol interference	63
4.1	Introduction	63
4.2	Problem formulation	64
4.3	Analytic solution	65
4.4	Discussion	67
5.	Signal design for optical communication	69
5.1	Introduction	69
5.2	The optical receiver	70
5.3	Signal and noise spectra	71
5.4	Optimisation problem	73
5.5	Optimisation	75
5.6	Results and conclusions	77

PART 2 COMPUTATIONAL METHODS FOR NONLINEAR OPTIMISATION

6.	Introduction to optimisation in electronics and communications	82
6.1	Introduction	82
6.2	Optimisation procedure	83
6.3	Error function	85
6.4	Optimisation strategies	87
6.5	Concluding remarks	91
7.	Mathematical basis of optimisation algorithms—higher order methods	93
7.1	Introduction	93
7.2	Stationary and optimum points of a function	93
7.3	Basic search strategy	96
7.4	The Newton–Raphson method	98
7.5	The Gauss–Newton method	101
7.6	Concluding remarks	103
8.	Quasi-Newton methods	105
8.1	Newton’s method	105
8.2	Deficiencies of Newton’s method	106
8.3	The quasi-Newton principle	106
8.4	Approximating the inverse	108
9.	Some practical aspects of optimisation	111
9.1	Introduction	111
9.2	The line search	112
9.3	Derivative evaluation	114
9.4	Constraints	116
10.	Strategies for linear network optimisation	119
10.1	Introduction	119
10.2	Specification formats	119
10.3	Error functions and the nature of error space	121
10.4	Choice of optimisation strategy	124
10.5	Case study	126
10.6	Concluding remarks	128
11.	Computer aided filter design using component optimisation	131
11.1	Introduction	131
11.2	Filter design	132
11.3	Results and conclusions	135

12.	Numerical optimisation of equalising filters for digital optical communication	136
12.1	Introduction	136
12.2	System model and equalising filter target specification	137
12.3	Filter design using numerical optimisation	141
12.4	Results and discussion	145
12.5	Conclusions	152
	Index	155
