

**PART 1 THEORETICAL TOPICS AND METHODS**

<b>1.</b>	<b>Generating-function methods in probability theory</b>	<b>1</b>
1.1	Introduction	1
1.2	Notation and definitions	2
1.3	Probability generating functions	4
1.4	Laplace transform	10
1.5	Moment generating functions	14
1.6	Characteristic functions	17
1.7	Philosophical reflections on this approach	24
<b>2.</b>	<b>Spectral characterisation of cyclostationary random processes</b>	<b>26</b>
2.1	Introduction	26
2.2	Stochastic processes – general concepts	26
2.3	Power spectrum for a stochastic process	29
2.4	Cyclostationary processes	32
<b>3.</b>	<b>Markov chains</b>	<b>38</b>
3.1	Introduction	38
3.2	Discrete-time Markov chains	38
3.3	Continuous-time Markov chains	52
3.4	Illustrative practical examples	57
3.5	Concluding remarks	62
<b>4.</b>	<b>Bounds and approximations in probability theory</b>	<b>63</b>
4.1	Introduction	63
4.2	Gaussian approximations and bounds	64
4.3	Bounds as expectational functionals	67
4.4	Moment space methods	71
4.5	Series approximations	75

## **PART 2 COMPOUND RANDOMNESS**

<b>5.</b>	<b>Statistical modelling of traffic in networks</b>	<b>80</b>
5.1	Introduction	80
5.2	Statistical modelling of traffic groups	81
5.3	Statistical theory of traffic in networks	95
<b>6.</b>	<b>Traffic overflow and the interrupted Poisson process</b>	<b>108</b>
6.1	Introduction	108
6.2	Basic properties of the IPP	108
6.3	Overflow traffic	112
6.4	Matrix solution method	114
6.5	Generalisations	118
<b>7.</b>	<b>Generating functions and bounds in optical communications</b>	<b>119</b>
7.1	Introduction	119
7.2	Optical direct detection method	120
7.3	Statistical description for the detected optical signal	122
7.4	Avalanche gain considerations	124
7.5	Receiver noise	126
7.6	Binary optical signalling	126
7.7	Conclusion	132
<b>8.</b>	<b>Modelling burst errors in digital transmission</b>	<b>134</b>
8.1	Introduction	134
8.2	The NTA distribution	135
8.3	Fitting data	136
8.4	Network performance in relation to the NTA distribution	138
8.5	Communication links in tandem	141
8.6	Conclusions	142

## **PART 3 NON-LINEAR OPERATIONS ON STOCHASTIC PROCESSES**

<b>9.</b>	<b>Non-linear operations on stochastic processes</b>	<b>144</b>
9.1	Introduction	144
9.2	Some definitions and basic theory	145
9.3	Representation of non-linearities	152
9.4	Direct transformation	155

9.5	Power series	158
9.6	The characteristic-function method	163
9.7	Orthogonal-function expansions	169
9.8	Diagonal processes	177
9.9	Conclusion	183
<b>10.</b>	<b>Timing extraction for baseband digital transmission</b>	<b>186</b>
10.1	Introduction	186
10.2	An apparent paradox	187
10.3	Spectral symmetry in digital signals	188
10.4	Recovery of a jitter-free timing signal	189
10.5	Statistical properties of the PAM signal and standing wave	193
10.6	Conclusions	197
<b>11.</b>	<b>Quantising noise spectra</b>	<b>199</b>
11.1	Introduction	199
11.2	Mathematical model of a sampled quantiser	201
11.3	Comparison between theoretical and experimental results	203
11.4	Hyper-Nyquist sampling and coloured input spectra	206
11.5	Asymptotic analysis of quantiser intermodulation terms	209
11.6	Summary and conclusions	215
<b>12.</b>	<b>Numerical calculation of intermodulation products produced by a memoryless non-linearity</b>	<b>218</b>
12.1	Introduction	218
12.2	The calculation procedure and associated mathematics	219
12.3	Applications of the technique	221
12.4	Relationships with other methods	229
12.5	Conclusions	231
<b>13.</b>	<b>Intermodulation in single-channel per carrier satellite communication systems</b>	<b>234</b>
13.1	Introduction	234
13.2	Mathematical modelling for intermodulation calculations	236
13.3	Particular problems related to SCPC companded fm	242
13.4	Intermodulation noise in voice activated SCPC companded fm channels	244

## PART 4 DIGITAL LINE TRANSMISSION

<b>14.</b>	<b>Representation and analysis of digital line codes</b>	<b>249</b>
14.1	Block codes	249
14.2	The sequential machine model	250
14.3	First order statistics	253
14.4	Review of spectral theory	255
14.5	Digital signal without block structure	258
14.6	Block structure: general theory (I)	261
14.7	Block structure: an introductory example	264
14.8	Block structure: general theory (II)	268
14.9	Other statistics for digital line signals	270
<b>15.</b>	<b>Power spectral density characterisation of digital transmission codes</b>	
15.1	Introduction	272
15.2	Computational procedure	273
15.3	Analysis of specific line codes	278
15.4	Concluding remarks	296
<b>16.</b>	<b>Design of a 7B8B line code with improved error monitoring capabilities</b>	<b>301</b>
16.1	Introduction	301
16.2	Variable period even mark parity error detection	302
16.3	7B8B state transition diagram	303
16.4	Combination of the 7B8B code and mark parity error detection	305
16.5	Conclusion	312
<b>17.</b>	<b>A Hermite series for error probability calculation in digital line systems</b>	<b>319</b>
17.1	Introduction	319
17.2	The phenomena	320
17.3	Theory	320
17.4	Practical examples	327
17.5	Conclusions	336
