Nº 271 1

CONTENTS

Chapter 1 INTRODUCTION TO NUCLEAR-ELECTRONIC SYSTEMS

1-1	A General Electronic System	1
1-2	Mean-Level Detection System	2
1-3	Nuclear-Particle Counting System	3
1-4	A System for Pulse Height Analysis	4
1-5	Coincidence System	5

Chapter 2 BASIC CIRCUITS FOR LINEAR WAVE SHAPING

2-1	Linear Circuit Elements	11
2-2	Basic Network Theorems	18
2-3	The High-Pass RC Network	28
2-4	The Low-Pass RC Network	41
2-5	RLC Circuits	47
2-6	Pulse Transformers	52
2-7	Delay Lines	63
2-8	Laplace Transform Used in Linear (Analog) Circuit Analysis	68

Chapter 3 DIODE CHARACTERISTICS AND APPLICATIONS

3-1	Operation of a Junction-Diode	89
3-2	Junction-Diode Characteristics	91
3-3	Diode Capacitances	95
3-4	Rectifiers and Voltage Multipliers	98
3-5	Zener Diode	99

3-6	Tunnel Diode	102
3-7	Clipping and Clamping Circuits	104

Chapter 4 TRANSISTOR CIRCUIT ANALYSIS

4-1	Construction of Bipolar Junction Transistors	119
4-2	Transistor Current Components and Amplifying Action	122
4-3	Common Base (CB) Configuration	126
4-4	Common Emitter (CE) Configuration	129
4-5	Common Collector (CC) Configuration (Emitter Follower)	137
4-6	Outline of Transistor Characteristics	138
4-7	Field-Effect Transistors (FETs)	143
4-8	MOSFETs	147
4-9	Low-Frequency Small-Signal BJT Model	156
4-10	The Hybrid- π Common-Emitter Model — The High-Frequency Small-Signal Equivalent Circuit	162
4-11	Biasing the BJT and the FET	163
4-12	The Small Signal FET Model and Amplifiers	173
4-13	Impedance Reflection in Transistors	179
4-14	Feedback Concepts and Quantitative Characteristics of Feedback Amplifiers	185
4-15	Feedback Amplifier Circuits	188
4-16	Frequency Response and Step Response of Amplifiers	194
4-17	Combined Effect of Bypass and Coupling Capacitors on Low- Frequency Response	198
4-18	High-Frequency Response of CE Transistor Amplifiers	200
4-19	Amplifier Bandwidth Improved by Feedback	207
4-20	The Basic Transistor Switching Circuit	210

Chapter 5 OPERATIONAL AMPLIFIER CHARACTERISTICS AND APPLICATIONS

5-1	Basic Operational Amplifiers	235
5-2	Basic Difference Amplifier	238
5-3	Difference Amplifier with Constant Current Source	248
5-4	Integrated-Circuit Operational Amplifiers	251
5-5	Operational Amplifier Terminology and Characteristic Comparison	254
5-6	Stability of Uncompensated OP-AMPS	260
5-7	Compensation of Op-amps	265
5-8	Basic Op-amp Applications	271
5-9	Analog Integration, Differentiation, and Computation	280

Chapter 6 FUNDAMENTALS OF DIGITAL CIRCUITS AND SYSTEMS

6-1	Introduction to Digital Systems	293
6-2	The OR Gate	296
6-3	The AND Gate or Coincidence Circuit	299
6-4	The NOT Gate or Inverter	303
6-5	The Inhibitor or Anticoincidence Circuit	305
6-6	The Exclusive OR Gate	305
6-7	The NAND and NOR Gates	307
6-8	Basic IC Logic Gates	311
6-9	Flip-Flops	315
6-10	Binary Adders	326
6-11	Introduction to Digital Computer Systems	333

Chapter 7 CHARACTERISTICS AND APPLICATIONS OF ASTABLE, BISTABLE, AND MONOSTABLE MULTIVIBRATORS

7-1	Astable Multivibrators	347
7-2	Astable Op-amp Multivibrator	350
7-3	Basic Bistable Circuit	351
7-4	A Self-Biased Flip-Flop	352
7-5	A Four-Binary Counting Chain	361
7-6	The Decade Counter with Feedback	365
7-7	The Decimal Counter without Feedback	367
7-8	The Integrated-Circuit Counters Consisting of Flip-Flops	369
7-9	Schmitt Trigger Circuits	373
7-10	VCO Type Waveform Generator	377
7-11	Monostable Multivibrators	378
7-12	Op-amp Monostable Multivibrator	380
7-13	The 555 Timer as a ONE-SHOT or Astable Multivibrator	386

Chapter 8 INTRODUCTION TO RADIATION DETECTION

8-1	Nuclear Radiation	403
8-2	Gas-Filled Detectors	411
8-3	Ionization-Chamber Survey meters	413
8-4	Geiger-Muller Survey Meters	417
8-5	Scintillation Detectors	423
8-6	Semiconductor Radiation Detectors	427
8-7	Charge-Sensitive and Current Preamplifiers	432

Chapter 9 PULSE AMPLIFIERS

9-1	Operation of Current-Mode and Voltage-Mode Signals	439
9-2	Various Sources of Pulse-Height Distortion	443
9-3	Basic Preamplifiers	456
9-4	Low-Noise Charge-Sensitive Preamplifiers for Semiconductor — Radiation Detectors	463
9-5	Low-Noise Voltage-Sensitive Preamplifier for Proportional Gas Counters	469
9-6	A General-Purpose Fast-Pulse Amplifier	474
9-7	Typical Circuits for the Main Linear Amplifiers	476
9-8	A Typical Nuclear Pulse Amplifier	485
9-9	A Wide-Band Linear Pulse Amplifier	491

Chapter 10 SINGLE-CHANNEL PULSE-HEIGHT ANALYZERS

10-1	Pulse-Height Analysis	497
10-2	The Typical Anti-Walk Single-Channel Analyzer	499
10-3	A Timing Single Channel Pulse Height Analyzer Made up of Integrated Circuits	505
10-4	A Single Channel Analyzer with Full Channel Logic Using Two Integrated Circuits	514

Chapter 11 MULTICHANNEL PULSE-HEIGHT ANALYZERS

11-1	Multichannel Pulse Height Analysis	527
11-2	Introduction to the Commercial One-Parameter Analyzers	537
11-3	Analog-to-Digital Converters (ADC) Circuits	541
11-4	Ferrite Core Memories	547
11-5	The Typical 1024 Channel Pulse-Height Analyzer	554
11-6	Integrated-Circuit Digital-to-Analog Converters	564
11-7	Integrated-Circuit Analog-to-Digital Converters	573
11-8	Semiconductor (Integrated-Circuit) Memories	579
11-9	A Multichannel Analyzer to Computer Interface	585

Chapter 12 TYPICAL NUCLEAR AND ELECTRONIC INSTRUMENTS

12-1	Typical G-M Tube Survey Meters	595
12-2	Ion-Chamber-Type Survey Meter Model 440	599
12-3	Gas-Proportional Alpha-Counter Model PAC-4G	605
12-4	A Radiation-Activated Sensor	612
12-5	Exponential Pulse Generator Model PG-75	616
12-6	Triggered-Sweep Oscilloscope Type 321	616

12-7	The Typical Vertical Amplifier	619
12-8	The Typical Time-Base Trigger Circuit	624
12-9	The Typical Time-Base Generator	628
12-10	Typical Horizontal Amplifier and Cathode-Ray Tube Circuits	635
12-11	Typical Voltage-Regulated Power Supplies	636
12-12	Typical Integrated-Circuit Scaler	637
12-13	Seven-Segment Displays and BCD-to-7-Segment Decoder	649
12-14	A Typical Circuit of Photomultiplier Power Supply Using High- Frequency Transmission	653
