PREFACE xiii

CHAPTER 1 INTRODUCTION AND CONCEPTS 1

1-1 Conduction 2
1-2 Convection 6
1-3 Radiation 8
1-4 Combined Convection and Radiation 10
1-5 Heat Transfer with Change of Phase 11
1-6 Units, Dimensions, and Conversion Factors 12
References 18

CHAPTER 2 CONDUCTION
Basic Equations 19

2-1 Heat-Flux Components 20
2-2 Differential Equation of Heat Conduction 21
2-3 Heat-Conduction Equation in Other Coordinate Systems 26
2-4 Boundary Conditions 28
2-5 Dimensionless Heat-Conduction Parameters 35
References 37

CHAPTER 3 CONDUCTION
One-dimensional Steady State 39

3-1 The Slab 40
3-2 The Cylinder 44
3-3 The Sphere 48
3-4 The Concept of Thermal Resistance 50
3-5 Composite Medium 53
3-6 Thermal Contact Resistance 59
3-7 Variable Thermal Conductivity 61
3-8 The One-dimensional Fin Equation 64
3-9 Temperature Distribution and Heat Flow in Fins of Uniform Cross Section 68

3-10 Fin Efficiency 71
3-11 Critical Radius of Insulation 76
References 78
Notes 79

CHAPTER 4 CONDUCTION
Two-dimensional Steady and One-dimensional Unsteady States 81

4-1 Orthogonal Functions 83
4-2 Steady-State Heat Conduction in a Rectangular Region 91
4-3 Separation into Simple Problems 98
4-4 Transient Heat Conduction in a Slab 100
4-5 Transient-Temperature Charts 104
4-6 Lumped-System Analysis for Transient Heat Flow 113
4-7 Lumped-System Analysis for Periodic Heat Flow 120
References 125

CHAPTER 5 CONDUCTION
Numerical Methods of Solution 127

5-1 Finite-Difference Approximation of Two-dimensional, Steady-State Heat-Conduction Equation 128
5-2 Gaussian Elimination and Iterative Methods of Solution 136
5-3 Finite-Difference Approximation of Time-dependent, One-dimensional Heat-Conduction Problem 138
References 148

CHAPTER 6 CONVECTION
Basic Equations 149

6-1 The Continuity Equation 150
6-2 The Momentum Equations 151
6-3 The Energy Equation 156
6-4 Summary of Equations of Motion and Energy 159
6-5 Dimensionless Groups 161
6-6 Boundary-Layer Concept 165
6-7 The Boundary-Layer Equations 167
References 170
Notes 171

CHAPTER 7 CONVECTION
Internal Laminar Forced Flow 177

7-1 Couette Flow 178
7-2 Fully Developed Velocity- and Temperature-Profile Concepts for Flow Inside Conduits 184
7-3 Heat Transfer and Pressure Drop in Hydrodynamically and Thermally Developed Laminar Flow in Conduits 186

7-4 Heat-Transfer Results for Thermal Entry Region in Laminar Flow Through Conduits 196
7-5 Heat Transfer in Liquid Metals for Laminar Flow in Conduits 200
References 202
Notes 203

CHAPTER 8 CONVECTION
External Laminar Forced Flow 205

8-1 Approximate Analysis of Velocity and Drag for Laminar Flow along a Flat Plate 206
8-2 Approximate Analysis of Heat Transfer for Laminar Flow along a Flat Plate 213
8-3 Approximate Analysis of Heat Transfer to Liquid Metals ($Pr \ll 1$) for Laminar Flow along a Flat Plate 221
8-4 Exact Analysis of Velocity and Drag for Laminar Flow along a Flat Plate 224
8-5 Heat Transfer in High-Speed Laminar Boundary-Layer Flow along a Flat Plate 228
References 232
Notes 233

CHAPTER 9 CONVECTION
Turbulent Internal and External Flow 237

9-1 Fundamentals of Turbulent Flow 238
9-2 Eddy-Viscosity and Eddy-Conductivity Concepts 243
9-3 Velocity Distribution in Turbulent Flow for Smooth Pipes 247
9-4 Friction Factor for Turbulent Flow Inside Pipes 252
9-5 Analogies between Heat and Momentum Transfer in Turbulent Flow 257
9-6 Empirical Formulas for Heat Transfer and Fluid Friction in Turbulent Flow 263
9-7 Heat Transfer in High-Speed Turbulent Boundary-Layer Flow along a Flat Plate 284
References 286
Notes 288

CHAPTER 10 FREE CONVECTION 291

10-1 Boundary-Layer Equations of Free Convection 292
10-2 Approximate Solution of Laminar Free Convection from a Vertical Plate 296
10-3 Empirical Relations for Free Convection 302
10-4 Combined Free and Forced Convection 316
References 319
Notes 320

CHAPTER 11 RADIATION
Basic Relations 323

11-1 Nature of Thermal Radiation 324
11-2 Radiation Intensity and Blackbody Radiation 325
11-3 Radiation to and from Real Surfaces 333
11-4 Radiation to and from a Volume Element 339
11-5 Radiative Properties of Surfaces 341
11-6 Radiative Properties of Materials 346
References 349

CHAPTER 12 RADIATION
Energy Exchange by Radiation in a Non-participating Medium 351

12-1 Concept of View Factor 353
12-2 Methods of Determination of View Factors 358
12-3 Radiative-Heat Exchange in Enclosures 365
References 374

CHAPTER 13 RADIATION
Energy Exchange by Radiation in an Absorbing, Emitting Medium 377

13-1 Equation of Radiative Transfer for a Plane-parallel Medium 378
13-2 Integration of the Equation of Radiative Transfer 381
13-3 Net Radiative-Heat Flux in an Absorbing, Emitting Slab at Uniform Temperature 385
13-4 Empirical Data for Absorption and Emission of Radiation by Nonluminous Gases 388
References 396

CHAPTER 14 HEAT TRANSFER WITH CHANGE IN PHASE 397

14-1 Filmwise Condensation of Pure Vapors 398
14-2 Filmwise Condensation of Liquid-Metal Vapors 410
14-3 Dropwise Condensation 412
14-4 Condensation on Fluted Surfaces 414
14-5 Condensation in the Presence of Noncondensable Gas 415
14-6 Pool Boiling 416
14-7 Boiling in Forced Flow Inside Tubes 424
References 429

CHAPTER 15 HEAT EXCHANGERS 435

15-1 Types of Heat Exchangers 436

15-2 Logarithmic Mean Temperature Difference *447*
15-3 Correction for LMTD with Cross-Flow Heat Exchangers *451*
15-4 Heat-Exchanger Effectiveness *454*
15-5 Fouling and Scaling of Heat Exchangers *461*
References *464*

CHAPTER 16 MASS TRANSFER *467*

16-1 Definitions of Flux *468*
16-2 Steady-State Equimolal Counterdiffusion in Gases *472*
16-3 Steady-State Unidirectional Diffusion in Gases *474*
16-4 Steady-State Diffusion in Liquids *478*
16-5 Unsteady Diffusion *480*
16-6 Mass Diffusivity *483*
16-7 Mass Transfer in Laminar and Turbulent Flow *490*
References *495*

APPENDIXES

A Physical Properties of Gases, Liquids, Liquid Metals, Metals, and Nonmetals *497*
B Roots of Transcendental Equations *507*
C Exponential Integrals $E_n(x)$ *511*
D Dimensional Data for Tubes and Pipes *515*
E List of Symbols *519*

PROBLEMS *525*

INDEX *563*
