Introduction	vii
Chapter 1. The Fundamental Existence Theorems	1
1. The basic existence theorem	1
2. The Peano theorem for n functions	13
Chapter 2. General Existence Theorems	21
1. The implicit function theorem	21
2. The Peano theorem in the implicit case	28
3. Continuation of the implicit function theorem	30
4. Existence theorem in the general case	32
Chapter 3. Uniqueness Theorems	36
1. Lipschitz condition	36
2. The basic uniqueness theorem	38
3. Uniqueness theorem for n unknown functions	41
4. Uniqueness in the implicit case	44
Chapter 4. The Picard Iterants	48
1. Introduction	48
2. The Picard iterants	54
3. The Picard existence theorem	59
4. Continuity in initial conditions	63
5. Continuity in parameters	72
Chapter 5. Properties of Solutions	77
1. Introduction	77
2. Differentiation with respect to y initial condition for the case $n = 1$	78
3. Differentiation with respect to y initial conditions for the case of n dependent variables	86
4. Differentiation with respect to parameters	93
5. Differentiation with respect to x initial condition	96
6. Higher derivatives with respect to y initial conditions ..	100
7. Higher derivatives with respect to parameters	101
8. Higher derivatives with respect to x initial condition ...	102
9. Derivatives with respect to the independent variable ...	103
10. Analyticity in solutions	104
11. Analyticity in parameters	107
12. α parameter theory	107
Chapter 6. Linear Differential Equations	110
1. Introduction	110
2. Existence and uniqueness	112
3. Wronskian theory	117
4. Variation of parameters and the Green's function	122
5. The n^{th} order linear differential equation	126
6. The Jordan theorem	136
7. The group of monodromy	139
8. Linear differential equations with constant coefficients ..	150
Index	154
