	Preface	ix
1	Excitable Tissue	1
	Abstract	1
	1-1 Introduction	2
	1-2 Various Types of Excitable Tissue	5
	1-3 Of Space and Time	10
	1-4 Excitable Tissues at Rest	14
	1-5 Ion Concentrations of Excitable Tissues at Rest	21
	References, 23	
	Problems, 24	
2	Sensory Receptors	25
	Abstract	25
	2-1 Various Sensory Receptors	25
	2-2 Receptor Response Versus Stimulation	29
	References, 37	
	Problems, 38	
3	Generation of the Action Potential	40
	Abstract	40
	3-1 The Need for Action Potentials	40
	3-2 From Sensory Receptor to Neuron	42
	3-3 Trains of Action Potentials	45

3-4	The Hodgkin-Huxley Action Potential	51
A3-1	A Poisson Point Process	56
	References, 57	
	Problems, 58	
4	Propagation of the Action Potential	60
	Abstract	60
4-1	In An Unmyelinated Fiber	61
4-2	Conduction Speed	66
4-3	In a Myelinated Fiber	70
4-4	“Photograph” of a Myelinated Fiber AP	75
	References, 76	
	Problems, 77	
5	Dendritic Summation	79
	Abstract	79
5-1	Junctions	79
5-2	The Dendritic Tree	83
5-3	Effect of Inhibitory Postsynaptic Potentials	90
A5-1	A Dendrite as an RCG Cable Network	91
A5-2	Response to Various Input Messages	95
	References, 101	
	Problems, 101	
6	Lateral Inhibition	103
	Abstract	103
6-1	A Single Stage of Lateral Inhibition	103
6-2	Three Stages of Lateral Inhibition	110
6-3	Two-Point Examples	116
6-4	Two-Dimensional Lateral Inhibition	119
6-5	Zero-Sum Lateral Inhibition	122
A6-1	Tabular and Taylor’s Series Methods	126
	References, 127	
	Problems, 127	
7	Simple Neuronal Systems	130
	Abstract	130
7-1	A “Start-and-Stop” Circuit	131
7-2	A Circuit That Can “Blow Up”	134
7-3	Circuits with Inhibition, Unstable with $W = 1$	141

7-4	Circuits with Inhibition, Stable with $W = 1$	146
A7-1	Denominator Zeros of a Linear System References, 151 Problems, 152	150
8	Skeletal Muscle Circuits	154
	Abstract	154
8-1	Some Neuroanatomical Features	154
8-2	With Feedback via Annulospiral Receptor Fiber	158
8-3	With Feedback Added via Flower-Spray Receptor Fiber	162
8-4	With Feedback Added via Tendon Organ Receptor Fiber	165
8-5	Typical Motoneuron Circuit	167
8-6	Clonus	170
A8-1	Calculations Relating to Annulospiral Receptor Fiber	173
A8-2	Calculations if Flower-Spray Receptor Fiber Is Added	174
A8-3	Calculations if Tendon Organ Receptor Fiber Is Added	175
A8-4	Clonus Calculations References, 178 Problems, 179	177
9	The Auditory System	181
	Abstract	181
9-1	Anatomy of the Ear	182
9-2	Single-Tone Response of the Basilar Membrane	191
9-3	Multitone Response of the Basilar Membrane	201
9-4	Signals Carried by the Acoustic Nerve	205
9-5	Frequency Discrimination in the Auditory Cortex	210
9-6	Two-Dimensional Auditory Map	218
A9-1	Derivation of Tuning Curves for the Auditory System References, 223 Problems, 225	220
10	The Eye as a Transducer	227
	Abstract	227

10-1	Some Characteristics of the Eye	228
10-2	Retinal Response to Steady Light	234
10-3	Contrast Enhancement	237
10-4	Mach Bands	250
10-5	Response to Flicker and Motion	253
10-6	Subjective Color Characteristics	258
10-7	The Standard Chromaticity Diagram	264
10-8	Two-Dimensional Color Map	266
10-9	Color Blindness	273
10-10	Color Contrast Enhancement	275
	References, 278	
	Problems, 280	
11	Visual Pattern Recognition, Neural Networks, and "Household Chores"	282
	Abstract	282
11-1	Some Characteristics of the Visual Cortex	283
11-2	One-Dimensional Model	289
11-3	Topological Representation	303
11-4	Neural Networks That Can Learn (and Forget)	306
11-5	Artificial Neural Networks	318
11-6	Saccadic Motion and Compensation	334
11-7	Control of Lens Opening	335
11-8	Distance Accommodation	336
11-9	Binocular Convergence	338
	References, 340	
	Problems, 343	
12	About the Brain	346
	Abstract	346
12-1	Some Anatomy of the Brain	347
12-2	The Cerebellum	350
12-3	Electroencephalographic (EEG) Signals	355
12-4	Memory	364
12-5	A Hypothetical Brain Model	370
12-6	Determinism versus Free Will	377
12-7	Consciousness	380
A12-1	Voltage Due to a Discharging Strip	384
	References, 385	
	Problems, 387	
	Index	389
