Foreword .....	xi	
Preface .....	xiii	
Acknowledgments .....	xv	
<b>1 The Changing Spectrum of Cardiovascular Intervention: The Role of Intraluminal Ultrasound</b>	<b>1</b>	
The pathophysiology of vascular disease .....	2	
<i>Atherosclerosis / Aneurysmal disease / Arterial dissection</i>		
Lesion distribution and the development of interventional methods .....	5	
Vascular imaging techniques .....	6	
<i>The unique potential of intravascular ultrasound</i>		
Critical issues in endovascular diagnosis and therapy ..	10	
<b>2 The Principles of Diagnostic Ultrasound Imaging ..</b>	<b>13</b>	
The physics of ultrasound .....	13	
Ultrasound image production .....	15	
Ultrasound beam and transducer characteristics .....	17	
<i>Beam focusing / Spatial resolution / Near-field and far-field effects</i>		
Imaging modes .....	19	
<i>A mode, B mode and M mode</i>		
Transducer designs and configurations .....	20	
<i>Linear-sequenced array transducers / Phased array transducers / Mechanical real-time transducers</i>		

An ultrasonic imaging system .....	24
<i>Transmission power / Image preprocessing (Overall gain, TGC, suppression) / Image postprocessing / hardcopy</i>	
Glossary of key words and abbreviations .....	29
<b>3 Intraluminal Ultrasound Imaging: Development and Devices .....</b>	<b>31</b>
Background .....	31
<i>Why use an intraluminal device? / The early intraluminal ultrasound devices</i>	
Intravascular cross-sectional imaging .....	34
<i>Electronically switched transducers / Mechanical transducers</i>	
The advantages and disadvantages of imaging configurations .....	39
High-frequency intravascular ultrasound .....	42
<b>4 Intraluminal Ultrasound Imaging Techniques .....</b>	<b>45</b>
Vascular access .....	45
<i>Percutaneous / Open</i>	
Catheter techniques: optimizing image quality and accuracy .....	51
<i>Image chamber flushing / Guidewire use / Catheter manipulation / Rotational orientation / Centering and flexion / Special techniques</i>	
<b>5 Computerized Intravascular Ultrasound Image Reconstruction .....</b>	<b>61</b>
The principles of computerized image processing .....	61
<i>Three-dimensional surface-rendered and volume-rendered imaging / Image Production / Data storage</i>	
Techniques of image reconstruction .....	64
<i>Cross-sectional image set acquisition / Longitudinal gray-scale imaging / Three-dimensional imaging</i>	

The limitations of computerized image reconstruction	70
<i>Dimensional accuracy / Near-field echo interference / Cost and complexity</i>	

**6 Intravascular Ultrasound Image Interpretation . . . . . 77**

Transmural imaging . . . . .	77
------------------------------	----

*Tissue characterization / Dimensional morphology and lesion distribution*

Luminal imaging . . . . .	83
---------------------------	----

*The assessment of endovascular intervention / Dissections and flaps / Stenoses and cross-sectional area*

**7 Current and Developing Clinical Applications of Intravascular Ultrasound . . . . . 93**

Diagnostic applications . . . . .	94
-----------------------------------	----

Therapeutic applications . . . . .	100
------------------------------------	-----

Experimental applications . . . . .	105
-------------------------------------	-----

<b>Subject Index . . . . . 111</b>	
------------------------------------	--
