Series Preface	vii
Preface	ix
0 Introduction	1
1 The Geometrical Point of View of Dynamical Systems: Background Material, Poincaré Maps, and Examples	5
1.1 Background Material from Dynamical Systems Theory	6
1.1A Equilibrium Solutions: Linearized Stability	6
1.1B Liapunov Functions	10
1.1C Invariant Manifolds: Linear and Nonlinear Systems	14
1.1D Periodic Solutions	25
1.1E Integrable Vector Fields on Two-Manifolds	28
1.1F Index Theory	35
1.1G Some General Properties of Vector Fields: Existence, Uniqueness, Differentiability, and Flows	36
1.1H Asymptotic Behavior	41
1.1I The Poincaré–Bendixson Theorem	46
Exercises	51
1.2 Poincaré Maps: Theory, Construction, and Examples	64
1.2A Poincaré Maps: Examples	64
1.2B Varying the Cross-Section: Conjugacies of Maps	89
1.2C Structural Stability, Genericity, and Transversality	94
1.2D Construction of the Poincaré Map	103
1.2E Application to the Dynamics of the Damped, Forced Duffing Oscillator	153
Exercises	175

2	Methods for Simplifying Dynamical Systems	193
2.1	Center Manifolds	193
2.1A	Center Manifolds for Vector Fields	194
2.1B	Center Manifolds Depending on Parameters	198
2.1C	The Inclusion of Linearly Unstable Directions	203
2.1D	Center Manifolds for Maps	204
2.1E	Properties of Center Manifolds	210
2.2	Normal Forms	211
2.2A	Normal Forms for Vector Fields	212
2.2B	Normal Forms for Vector Fields with Parameters	220
2.2C	Normal Forms for Maps	225
2.2D	Conjugacies and Equivalences of Vector Fields	229
2.3	Final Remarks	237
	Exercises	239
3	Local Bifurcations	253
3.1	Bifurcation of Fixed Points of Vector Fields	253
3.1A	A Zero Eigenvalue	254
3.1B	A Pure Imaginary Pair of Eigenvalues: The Poincaré–Andronov–Hopf Bifurcation	270
3.1C	Stability of Bifurcations Under Perturbations	278
3.1D	The Idea of the Codimension of a Bifurcation Appendix 1: Versal Deformations of Families of Matrices	284 305
3.1E	The Double-Zero Eigenvalue	321
3.1F	A Zero and a Pure Imaginary Pair of Eigenvalues	331
3.2	Bifurcations of Fixed Points of Maps	357
3.2A	An Eigenvalue of 1	358
3.2B	An Eigenvalue of -1	371
3.2C	A Pair of Eigenvalues of Modulus 1: The Naimark–Sacker Bifurcation	374
3.2D	The Codimension of Local Bifurcations of Maps	381
3.3	On the Interpretation and Application of Bifurcation Diagrams: A Word of Caution	384
	Exercises	386

4	Some Aspects of Global Bifurcation and Chaos	420
4.1	The Smale Horseshoe	420
4.1A	Definition of the Smale Horseshoe Map	421
4.1B	Construction of the Invariant Set	423
4.1C	Symbolic Dynamics	430
4.1D	The Dynamics on the Invariant Set	433
4.1E	Chaos	436
4.2	Symbolic Dynamics	438
4.2A	The Structure of the Space of Symbol Sequences	439
4.2B	The Shift Map	442
4.3	The Conley–Moser Conditions, or “How to Prove That a Dynamical System is Chaotic”	443
4.3A	The Main Theorem	444
4.3B	Sector Bundles	458
4.3C	Hyperbolic Invariant Sets	463
4.4	Dynamics Near Homoclinic Points of Two-Dimensional Maps	470
4.5	Melnikov’s Method for Homoclinic Orbits in Two-Dimensional, Time-Periodic Vector Fields	483
4.5A	The General Theory	484
4.5B	Poincaré Maps and the Geometry of the Melnikov Function	505
4.5C	Some Properties of the Melnikov Function	507
4.5D	Relationship with the Subharmonic Melnikov Function	509
4.5E	Homoclinic and Subharmonic Bifurcations	511
4.5F	Application to the Damped, Forced Duffing Oscillator	513
4.6	Geometry and Dynamics in the Tangle	519
4.6A	Pips and Lobes	521
4.6B	Transport in Phase Space	526
4.6C	Technical Details	535
4.6D	Application to the Melnikov Theory to Transport	538

4.7	Homoclinic Bifurcations: Cascades of Period-Doubling and Saddle-Node Bifurcations	540
4.8	Orbits Homoclinic to Hyperbolic Fixed Points in Three-Dimensional Autonomous Vector Fields	552
4.8A	Orbits Homoclinic to a Saddle-Point with Purely Real Eigenvalues	556
4.8B	Orbits Homoclinic to a Saddle-Focus	573
4.9	Global Bifurcations Arising from Local Codimension-Two Bifurcations	591
4.9A	The Double-Zero Eigenvalue	592
4.9B	A Zero and a Pure Imaginary Pair of Eigenvalues	595
4.10	Liapunov Exponents	603
4.11	Chaos and Strange Attractors	608
	Exercises	616
	Bibliography	651
	Index	667
