|---|--|----------------|
| <i>Preface</i> | | <i>page xi</i> |
| 1 Introduction | | 1 |
| 1 Nonlinear systems, bifurcations and symmetry breaking | | 1 |
| 2 The origin of bifurcation theory | | 3 |
| 3 A turning point | | 6 |
| 4 A transcritical bifurcation | | 10 |
| 5 A pitchfork bifurcation | | 13 |
| 6 A Hopf bifurcation | | 19 |
| 7 Nonlinear oscillations of a conservative system | | 22 |
| 8 Difference equations | | 28 |
| 9 An experiment on statics | | 35 |
| Further reading | | 37 |
| Problems | | 38 |
| 2 Classification of bifurcations of equilibrium points | | 48 |
| 1 Introduction | | 48 |
| 2 Classification of bifurcations in one dimension | | 49 |
| 3 Imperfections | | 55 |
| 4 Classification of bifurcations in higher dimensions | | 59 |
| Further reading | | 63 |
| Problems | | 63 |
| 3 Difference equations | | 68 |
| 1 The stability of fixed points | | 68 |
| 2 Periodic solutions and their stability | | 72 |
| 3 Attractors and volume | | 74 |
| 3.1 Attractors | | 74 |
| 3.2 Volume | | 80 |
| 4 The logistic equation | | 81 |
| 5 Numerical and computational methods | | 94 |
| 6 Some two-dimensional difference equations | | 96 |
| 7 Iterated maps of the complex plane | | 103 |
| Further reading | | 109 |
| Problems | | 109 |

| | | |
|-----------|--|------------|
| *4 | Some special topics | 125 |
| 1 | Cantor sets | 125 |
| 2 | Dimension and fractals | 127 |
| 3 | Renormalization group theory | 132 |
| | 3.1 Introduction | 132 |
| | 3.2 Feigenbaum's theory of scaling | 135 |
| 4 | Liapounov exponents | 140 |
| | Further reading | 143 |
| | Problems | 144 |
| 5 | Ordinary differential equations | 149 |
| 1 | Introduction | 149 |
| 2 | Hamiltonian systems | 153 |
| 3 | The geometry of orbits | 155 |
| *4 | The stability of a periodic solution | 157 |
| | Further reading | 161 |
| | Problems | 161 |
| 6 | Second-order autonomous differential systems | 170 |
| 1 | Introduction | 170 |
| 2 | Linear systems | 172 |
| 3 | The direct method of Liapounov | 178 |
| 4 | The Lindstedt–Poincaré method | 181 |
| 5 | Limit cycles | 186 |
| 6 | Van der Pol's equation | 190 |
| | Further reading | 197 |
| | Problems | 199 |
| 7 | Forced oscillations | 214 |
| 1 | Introduction | 214 |
| 2 | Weakly nonlinear oscillations not near resonance: regular perturbation theory | 215 |
| 3 | Weakly nonlinear oscillations near resonance | 219 |
| 4 | Subharmonics | 225 |
| | Further reading | 229 |
| | Problems | 230 |
| 8 | Chaos | 233 |
| 1 | The Lorenz system | 233 |
| 2 | Duffing's equation with negative stiffness | 246 |
| *3 | The chaotic break-up of a homoclinic orbit: Mel'nikov's method | 251 |
| 4 | Routes to chaos | 261 |
| 5 | Analysis of time series | 264 |
| | Further reading | 277 |
| | Problems | 277 |

| | |
|--|------------|
| *Appendix: Some partial-differential problems | 283 |
| <i>Answers and hints to selected problems</i> | 290 |
| <i>Bibliography and author index</i> | 301 |
| <i>Motion picture and video index</i> | 309 |
| <i>Subject index</i> | 310 |
