## Preface vii

## 1 What Happens in Blood 3

- 1.1 The Partial Pressure of a Gas 3
- 1.2 Composition of Alveolar Air 5
- 1.3 Carriage of Oxygen in the Blood 7
- 1.4 Carriage of Oxygen in the Blood by Physical Solution 8
- 1.5 Carriage of Oxygen in the Blood by Hemoglobin 9
- 1.6 The pH Scale 13
- 1.7 Buffer Action 17
- 1.8 Hemoglobin as a Buffer: The Titration Curve of Oxy-hemoglobin 19
- 1.9 The Direct Combination of Carbon Dioxide with Hemoglobin: Carbamino Compounds 22
- 1.10 Hemoglobin as a Buffer: The Effect of Reduction 24
- 1.11 Carriage of Carbon Dioxide in the Blood: Qualitative Aspects 28
- 1.12 Carriage of Carbon Dioxide in the Blood: Quantitative Aspects 33
- 1.13 Fundamental Equations 35
- 1.14 Calculation of the Partition of Carbon Dioxide in Plasma 38
- 1.15 Calculation of the Partition of Carbon Dioxide in Whole Blood 40
- 1.16 The pH-Bicarbonate Diagram 44
- 1.17 The Buffer Value of Separated Plasma and of Oxygenated Whole Blood 46

## 2 What Happens in a Person 50

- 2.1 The Slope of the Normal Buffer Line *in Vitro* and *in Vivo* 50
- 2.2 The Buffer Line of Reduced Blood and the Concept of Base Excess or Deficit 55
- 2.3 Estimation of Base Excess or Deficit 58

## Contents

- 2.4 Normal Acid-Base Paths without Compensation 62
- 2.5 Normal Ranges 66
- 2.6 Chemical Regulation of Respiration 68
- 2.7 Respiratory Compensation for Metabolic Alkalosis or Acidosis 72
- 2.8 Renal Processes Responding to Acid-Base Changes 74
- 2.9 Renal Responses to Metabolic Alkalosis and Acidosis 80
- 2.10 Renal Compensation for Respiratory Alkalosis or Acidosis 83
- 2.11 Identification of Acid-Base Status 87
- 2.12 Clinical Example: Metabolic Acidosis 92
- 2.13 Clinical Example: Respiratory Alkalosis 94

## **3 Other Ways of Looking at the Problem 99**

- 3.1 The pH-Log  $P_{\text{CO}_2}$  Diagram 99
- 3.2 Determination of Acid-Base Status of Blood by Equilibration with Gas Mixtures of Known  $P_{\text{CO}_2}$  105
- 3.3 Quantitation of the Metabolic Component: The Carbon Dioxide Combining Power 109
- 3.4 Quantitation of the Metabolic Component: Standard Bicarbonate 111
- 3.5 Quantitation of the Metabolic Component: The Base Excess Scale 113

## **Bibliography 118**
