

TABLE OF CONTENTS

Volume I

Chapter 1

Introduction

I.	General Measurement and Diagnostic System.....	1
II.	Classification of Signals	3
III.	Fundamentals of Signal Processing	4
IV.	Biomedical Signal Acquisition and Processing.....	5
V.	The Book	6
	References.....	7

Chapter 2

The Origin of the Bioelectric Signal

I.	Introduction.....	9
II.	The Nerve Cell	9
	A. Introduction	9
	B. The Excitable Membrane.....	10
	C. Action Potential Initiation and Propagation.....	11
	D. The Synapse.....	11
III.	The Muscle	12
	A. Muscle Structure	12
	B. Muscle Contraction.....	12
IV.	Volume Conductors.....	12
	References.....	13

Chapter 3

Random Processes

I.	Introduction.....	15
II.	Elements of Probability Theory	15
	A. Introduction	15
	B. Joint Probabilities	16
	C. Statistically Independent Events	17
	D. Random Variables.....	17
	E. Probability Distribution Functions.....	18
	F. Probability Density Functions	19
III.	Random Signals Characterization	21
	A. Random Processes.....	21
	B. Statistical Averages (Expectations)	22
IV.	Correlation Analysis	23
	A. The Correlation Coefficient	23
	B. The Correlation Function.....	25
	C. Ergodicity	26
V.	The Gaussian Process.....	26
	A. The Central Limit Theorem	26
	B. Multivariate Gaussian Process.....	27
	References.....	28

Chapter 4

Digital Signal Processing

I.	Introduction	29
II.	Sampling	29
	A. Introduction	29
	B. Uniform Sampling	30
	C. Nonuniform Sampling	31
	1. Zero, First, and Second Order Adaptive Sampling	32
	2. Nonuniform Sampling with Run Length Encoding	34
III.	Quantization	36
	A. Introduction	36
	B. Zero Memory Quantization	36
	C. Analysis of Quantization Noise	39
	D. Rough Quantization	40
IV.	Discrete Methods	42
	A. The Z Transform	42
	B. Difference Equations	43
	References	44

Chapter 5

Finite Time Averaging

I.	Introduction	45
II.	Finite Time Estimation of the Mean Value	45
	A. The Continuous Case	45
	1. Short Observation Time	47
	2. Long Observation Time	48
	B. The Discrete Case	51
III.	Estimation of the Variance and Correlation	53
	A. Variance Estimation — The Continuous Case	53
	B. Variance Estimation — The Discrete Case	54
	C. Correlation Estimation	56
IV.	Synchronous Averaging (CAT-Computed Averaged Transients)	56
	A. Introduction	56
	B. Statistically Independent Responses	58
	C. Totally Dependent Responses	59
	D. The General Case	60
	E. Records Alignment, Estimation of Latencies	61
	References	64

Chapter 6

Frequency Domain Analysis

I.	Introduction	65
	A. Frequency Domain Representation	65
	B. Some Properties of the Fourier Transform	65
	1. The Convolution Theorem	66
	2. Parseval's Theorem	66
	3. Fourier Transform of Periodic Signals	67
	C. Discrete and Fast Fourier Transforms (DFT, FFT)	68
II.	Spectral Analysis	71
	A. The Power Spectral Density Function	71
	B. Cross-Spectral Density and Coherence Functions	72

III.	Linear Filtering	73
A.	Introduction	73
B.	Digital Filters.....	74
C.	The Wiener Filter	74
IV.	Cepstral Analysis and Homomorphic Filtering	76
A.	Introduction	76
B.	The Cepstra	76
C.	Homomorphic Filtering.....	77
	References.....	80

Chapter 7

Time Series Analysis-Linear Prediction

I.	Introduction	81
II.	Autoregressive (AR) Models.....	85
A.	Introduction	85
B.	Estimation of AR Parameters — Least Squares Method.....	85
III.	Moving Average (MA) Models	89
A.	Autocorrelation Function of MA Process	89
B.	Iterative Estimate of the MA Parameters	89
IV.	Mixed Autoregressive Moving Average (ARMA) Models	90
A.	Introduction	90
B.	Parameter Estimation of ARMA Models — Direct Method	90
C.	Parameter Estimation of ARMA Models — Maximum Likelihood Method	93
V.	Process Order Estimation	95
A.	—Introduction	95
B.	Residuals Flatness	95
C.	Final Prediction Error (FPE).....	96
D.	Akaike Information Theoretic Criterion (AIC).....	97
E.	Ill Conditioning of Correlation Matrix.....	98
VI.	Lattice Representation	98
VII.	Nonstationary Processes	99
A.	Trend Nonstationarity — ARIMA.....	99
B.	Seasonal Processes	101
VIII.	Adaptive Segmentation	101
A.	Introduction	101
B.	The Autocorrelation Measure (ACM) Method.....	102
C.	Spectral Error Measure (SEM) Method.....	103
D.	Other Segmentation Methods.....	105
	References.....	106

Chapter 8

Spectral Estimation

I.	Introduction.....	109
II.	Methods Based on the Fourier Transform.....	110
A.	Introduction	110
B.	The Blackman-Tukey Method	111
C.	The Periodogram	112
1.	Introduction.....	112
2.	The Expected Value of the Periodogram.....	114
3.	Variance of the Periodogram.....	116

4.	Weighted Overlapped Segment Averaging (WOSA)	117
5.	Smoothing the Periodogram.....	119
III.	Maximum Entropy Method (MEM) and the AR Method.....	122
IV.	The Moving Average (MA) Method	125
V.	Autoregressive Moving Average (ARMA) Methods	126
A.	The General Case	126
B.	Pisarenko's Harmonic Decomposition (PHD).....	127
C.	Prony's Method	130
VI.	Maximum Likelihood Method (MLM) — Capon's Spectral Estimation.....	133
VII.	Discussion and Comparison of Several Methods	134
	References.....	137

Chapter 9

Adaptive Filtering

I.	Introduction.....	141
II.	General Structure of Adaptive Filters	142
A.	Introduction	142
B.	Adaptive System Parameter Identification	142
C.	Adaptive Signal Estimation.....	142
D.	Adaptive Signal Correction.....	143
III.	Least Mean Squares (LMS) Adaptive Filter.....	143
A.	Introduction	143
B.	Adaptive Linear Combiner	144
C.	The LMS Adaptive Algorithm.....	145
D.	The LMS Adaptive Filter.....	147
IV.	Adaptive Noise Cancelling	147
A.	Introduction	147
B.	Noise Canceller with Reference Input	148
C.	Noise Canceller without Reference Input.....	153
D.	Adaptive Line Enhancer (ALE)	154
V.	Improved Adaptive Filtering	154
A.	Multichannel Adaptive Signal Enhancement.....	154
B.	Time-Sequenced Adaptive Filtering	156
	References.....	158

Index	161

TABLE OF CONTENTS

Volume II

Chapter 1

Wavelet Detection

I.	Introduction.....	1
II.	Detection by Structural Features	2
A.	Simple Structural Algorithms.....	2
B.	Contour Limiting	5
III.	Matched Filtering	6
IV.	Adaptive Wavelet Detection	9
A.	Introduction	9
B.	Template Adaptation	10

C.	Tracking a Slowly Changing Wavelet	12
D.	Correction of Initial Template	12
V.	Detection of Overlapping Wavelets	14
A.	Statement of the Problem	14
B.	Initial Detection and Composite Hypothesis Formulation	15
C.	Error Criterion and Minimization	16
	References	17

Chapter 2

Point Processes

I.	Introduction	19
II.	Statistical Preliminaries	20
III.	Spectral Analysis	24
A.	Introduction	24
B.	Interevent Intervals Spectral Analysis	24
C.	Counts Spectral Analysis	25
IV.	Some Commonly Used Models	26
A.	Introduction	26
B.	Renewal Processes	26
1.	Serial Correlogram	27
2.	Flatness of Spectrum	27
3.	A Nonparametric Trend Test	28
C.	Poisson Processes	28
D.	Other Distributions	31
1.	The Weibull Distribution	31
2.	The Erland (Gamma) Distribution	32
3.	Exponential Autoregressive Moving Average (EARMA)	32
4.	Semi-Markov Processes	32
V.	Multivariate Point Processes	33
A.	Introduction	33
B.	Characterization of Multivariate Point Processes	33
C.	Marked Processes	35
	References	35

Chapter 3

Signal Classification and Recognition

I.	Introduction	37
II.	Statistical Signal Classification	39
A.	Introduction	39
B.	Bayes Decision Theory and Classification	39
C.	k-Nearest Neighbor (k-NN) Classification	50
III.	Linear Discriminant Functions	53
A.	Introduction	53
B.	Generalized Linear Discriminant Functions	55
C.	Minimum Squared Error Method	56
D.	Minimum Distance Classifiers	58
E.	Entropy Criteria Methods	60
1.	Introduction	60
2.	Minimization of Entropy	60
3.	Maximization of Entropy	62
IV.	Fisher's Linear Discriminant	63

V.	Karhunen-Loeve Expansions (KLE).....	66
A.	Introduction	66
B.	Karhunen-Loeve Transformation (KLT) — Principal Components Analysis (PCA)	67
C.	Singular Value Decomposition (SVD).....	69
VI.	Direct Feature Selection and Ordering	75
A.	Introduction	75
B.	The Divergence	76
C.	Dynamic Programming Methods	77
VII.	Time Warping	79
	References.....	84

Chapter 4

Syntactic Methods

I.	Introduction	87
II.	Basic Definitions of Formal Languages	89
III.	Syntactic Recognizers.....	92
A.	Introduction	92
B.	Finite State Automata	92
C.	Context-Free Push-Down Automata (PDA).....	95
D.	Simple Syntax-Directed Translation	100
E.	Parsing	100
IV.	Stochastic Languages and Syntax Analysis	101
A.	Introduction	101
B.	Stochastic Recognizers	102
V.	Grammatical Inference.....	104
VI.	Examples	104
A.	Syntactic Analysis of Carotid Blood Pressure	104
B.	Syntactic Analysis of ECG	106
C.	Syntactic Analysis of EEG	110
	References.....	111

Appendix A

Characteristics of Some Dynamic Biomedical Signals

I.	Introduction.....	113
II.	Bioelectric Signals	113
A.	Action Potential	113
B.	Electroneurogram (ENG)	113
C.	Electroretinogram (ERG)	113
D.	Electro-Oculogram (EOG).....	114
E.	Electroencephalogram (EEG).....	114
F.	Evoked Potentials (EP).....	117
G.	Electromyography (EMG)	119
H.	Electrocardiography (ECG, EKG)	121
1.	The Signal	121
2.	High-Frequency Electrocardiography.....	124
3.	Fetal Electrocardiography (FECG).....	124
4.	His Bundle Electrocardiography (HBE).....	124
5.	Vector Electrocardiography (VCG)	124
I.	Electrogastrography (EGG).....	124
J.	Galvanic Skin Reflex (GSR), Electrodermal Response (EDR).....	125

III.	Impedance	125
A.	Bioimpedance	125
B.	Impedance Plethysmography	126
C.	Rheoencephalography (REG)	126
D.	Impedance Pneumography	126
E.	Impedance Oculography (ZOG)	126
F.	Electroglottography	126
IV.	Acoustical Signals	126
A.	Phonocardiography	126
1.	The First Heart Sound	126
2.	The Second Heart Sound	127
3.	The Third Heart Sound	127
4.	The Fourth Heart Sound	127
5.	Abnormalities of the Heart Sound	127
B.	Auscultation	127
C.	Voice	128
D.	Korotkoff Sounds	129
V.	Mechanical Signals	130
A.	Pressure Signals	130
B.	Apexcardiography (ACG)	130
C.	Pneumotachography	130
D.	Dye and Thermal Dilution	130
E.	Fetal Movements	131
VI.	Biomagnetic Signals	131
A.	Magnetoencephalography (MEG)	131
B.	Magnetocardiography (MCG)	131
C.	Magnetopneumography (MPG)	131
VII.	Biochemical Signals	131
VIII.	Two-Dimensional Signals	132
	References	134

Appendix B

Data Lag Windows

I.	Introduction	139
II.	Some Classical Windows	139
A.	Introduction	139
B.	Rectangular (Dirichlet) Window	140
C.	Triangle (Bartlet) Window	140
D.	Cosine _n Windows	141
E.	Hamming Window	143
F.	Dolph-Chebyshev Window	145
	References	151

Appendix C

Computer Programs

I.	Introduction	153
II.	Main Programs	154
●	NUSAMP (Nonuniform Sampling)	154
●	SEGMNT (Adaptive Segmentation)	158
●	PERSPT (Periodogram Power Spectral Density Estimation)	162
●	WOSA (WOSA Power Spectral Density Estimation)	162

- MEMSPT (Maximum Entropy [MEM] Power Spectral Density Estimation)165
- NOICAN (Adaptive Noise Cancelling) 167
- CONLIM (Wavelet Detection by the Contour Limiting Method) 169
- COMPRS (Reduction of Signal Dimensionality by Three Methods: Karhunen-Loeve [KL], Entropy [ENT], and Fisher Discriminant [FI]... 171

III. Subroutines 174

- LMS (Adaptive Linear Combiner, Widrow's Algorithm)..... 174
- NACOR (Normalized Autocorrelation Sequence)..... 175
- DLPC (LPC, PARCOR, and Prediction Error of AR Model of Order P) 176
- DLPC 20 (LPC, PARCOR, and Prediction Error of All AR Models of Order 2 to 20)..... 177
- FTOIA (Fast Fourier Transform [FFT]) 178
- XTERM (Maximum and Minimum Values of a Vector) 180
- ADD (Addition and Subtraction of Matrices)..... 180
- MUL (Matrix Multiplication)..... 181
- MEAN (Mean of a Set of Vectors)..... 181
- COVA (Covariance Matrix of a Cluster of Vectors) 182
- INVER (Inversion of a Real Symetric Matrix) 183
- SYMINV (Inversion of a Real Symetric Matrix, [Original Matrix Destroyed])..... 183
- RFILE (Read Data Vector From Unformatted File) 185
- WFILE (Write Data Vector on Unformatted File) 186
- RFILEM (Read Data Matrix From Unformatted File) 187
- WFILEM (Write Data Matrix on Unformatted File)..... 188
