Transition to SI Units in Radiation Protection xxii

PART I. HISTORICAL PROLOGUE 1

PART II. PRINCIPLES OF RADIATION PROTECTION

1. Energy and Injury 8
2. Directly and Indirectly Ionizing Particles 10
3. Beta Particles 11
 - 3.1 Properties of Some Common Beta-Emitting Radionuclides 12
 - 3.2 Protection from External Beta Particle Sources 18
4. Characteristics of Indirectly Ionizing Particles 20
5. Gamma Rays 21
 - 5.1 Energies and Penetration of Gamma Rays 22
 - 5.2 Attenuation Coefficients of Gamma Photons 25
 - 5.3 Calculation of Attenuation of Gamma Photons 28
 - 5.4 Protection from Gamma Sources 32
6. Some Additional Directly Ionizing Particles 32
 - 6.1 The Positron 33
 - 6.2 The Alpha Particle 33
 - 6.3 The Proton 35
7. The Neutron 36
 - 7.1 Sources of Neutrons 36
 - 7.2 Neutron Collisions 38
 - 7.3 Attenuation of Neutrons 39

8. The Absorbed Dose 42
 - 8.1 The Pattern of the Imparted Energy in a Medium 42
 - 8.2 Definition of Absorbed Dose 44
 - 8.3 The Rad and the Gray 44
9. The Dose Equivalent 45
 - 9.1 The Quality Factor 46
 - 9.2 The Rem and the Sievert 46
10. The Roentgen 48
11. The Significance of External Radiation Levels 48
12. Exposure from Internal Radiation Sources 53
 - 12.1 The Activity 54
 - 12.2 The Curie and the Becquerel 54
 - 12.3 Significance of Levels of Radioactivity 55
 - 12.4 Maximum Permissible Concentrations 57
 - 12.5 Protection from Radioactive Contamination 57
13. Some Simple Calculations in Radiation Protection 59
 - 13.1 Dose from Beta Particles 59
 - 13.2 Exposure Rate and Dose Rate from Gamma Photons 62
 - 13.3 Reduction of Dose Rate 63
 - 13.4 Correction for Radioactive Decay 64
 - 13.5 Shielding of Large or Complex Sources 64
14. X Rays 68
 - 14.1 Production 68
 - 14.2 Diagnostic Radiology 70
 - 14.3 X-Ray Attenuation 72
 - 14.4 Effects of Photon Energy Distribution 73
 - 14.5 A Description of an X-Ray Machine 77
 - 14.6 Mammography 84
 - 14.7 Computed Tomography 85
 - 14.8 Technical Approaches for Minimizing the Dose 87
 - 14.9 Protection of the Patient 90
 - 14.10 Radiation Levels 95
 - 14.11 Shielding the X-Ray Beam 97
 - 14.12 Comments for Users of X-Ray Diffraction Machines 99
15. Particle Accelerators 102
 - 15.1 History of Particle Accelerators 103
 - 15.2 Interactions of High-Energy Particles 105
 - 15.3 Shielding High-Energy Particles 107

PART III. RADIATION DOSE CALCULATIONS

1. Dose from Beta-Emitting Radionuclides 111
 - 1.1 Calculating the Initial Dose Rate 112

- 1.2 Dose Calculations for a Decaying Radionuclide 112
- 1.3 Some Relationships Governing Radioactive Decay 113
- 1.4 Relationships Involving Both Radioactive Decay and Biological Elimination 115
- 1.5 Absorbed Beta Dose over a Period of Time 117
- 2. A Closer Look at the Dose from Beta Particles 118
 - 2.1 Beta Particle Point Source Dose Functions 118
 - 2.2 Evaluation of Beta Particle Dose from the Fluence and Stopping Power 118
- 3. Calculation of the Absorbed Dose from Gamma Emitters 120
 - 3.1 Dose Rate from a Point Source of Photons 120
 - 3.2 Evaluation of the Specific Dose-Rate Constant 121
 - 3.3 Dose from Distributed Gamma Sources 125
 - 3.4 The Absorbed-Fraction Method 127
 - 3.5 Dose to Targets outside the Source Volume 128
 - 3.6 Use of the Equilibrium Dose Constant 129
 - 3.7 The S Factor 133
 - 3.8 Limits on Intake 134
- 4. Summary of Formulas 140
- 5. Dose Calculations for Specific Nuclides 143
 - 5.1 Hydrogen-3 143
 - 5.2 Iodine-131 and Iodine-125 148
 - 5.3 Strontium-90 153
 - 5.4 Xenon-133 and Krypton-85 156
 - 5.5 Uranium-238 164
 - 5.6 Radon-222 166
 - 5.7 Plutonium-239 171
 - 5.8 Dose Rates from Small, Highly Radioactive Particles 175
 - 5.9 Radiation Doses in Nuclear Medicine 176
- 6. Evaluation of Doses within the Body from X-Rays 178
 - 6.1 Organ Doses in Prescribed X-Ray Examinations 184

PART IV. RADIATION MEASUREMENTS

- 1. Radiation Counting with a Geiger-Mueller Counter 189
 - 1.1 A G-M Counter Described 190
 - 1.2 Adjusting the High Voltage 191
 - 1.3 How a G-M Counter Can Lose Counts 191
 - 1.4 How to Distinguish between Beta and Gamma Radiation 193
 - 1.5 How to Determine Source Strength of a Beta Emitter 194
 - 1.6 Factors Affecting Efficiency of Detection 195
 - 1.7 Correcting for Attenuation of Beta Particles 198
 - 1.8 Counting Gamma Photons, 198
 - 1.9 Standardization of Radionuclides 200

2. Energy Measurements with a Scintillation Detector 201
 - 2.1 Description of Scintillation Detectors and Photomultipliers 201
 - 2.2 Pulse Counting with a Scintillation Counter and Scaler 202
 - 2.3 Pulse-Height Distributions 203
 - 2.4 Electronic Processing of Pulses 208
3. Detectors for Special Counting Problems 220
 - 3.1 Gas-Filled Proportional Counters 220
 - 3.2 Semiconductor Detectors 221
4. Measuring Radiation Dose Rates 225
 - 4.1 Measuring X and Gamma Dose Rates with Ionization-Type Survey Meters 226
 - 4.2 Use of Scintillation Detectors to Measure Dose Rates 228
 - 4.3 Use of G-M Counters to Monitor Dose Rates 228
 - 4.4 Routine Performance Checks of Survey Meters 228
 - 4.5 Calibration of Survey Meters 230
 - 4.6 Beta Dose-Rate Measurements 236
 - 4.7 Neutron Measurements 237
5. Measuring Accumulated Doses over Extended Periods 237
6. Specifying Statistical Variations in Counting Results 241
 - 6.1 Nature of Counting Distributions 241
 - 6.2 Sample Average and Confidence Limits 242
 - 6.3 Standard Deviation 244
 - 6.4 The Normal Error Curve 245
 - 6.5 Precision of a Single Radiation Measurement 247
 - 6.6 The Effect of Background 248
 - 6.7 The Precision of the Ratio of Two Measurements 250
 - 6.8 Testing the Distribution of a Series of Counts 251
 - 6.9 Measurements at the Limits of Sensitivity of Detectors 252
7. Comments on Making Accurate Measurements 258

PART V. PRACTICAL ASPECTS OF THE USE OF RADIONUCLIDES

1. Obtaining Authorization to Use Radionuclides 261
 - 1.1 Administration of Radioactive Material to Humans 263
 - 1.2 Requirements for Obtaining Approval to Use New Radioactive Drugs 266
 - 1.3 Protection of the Patient in Nuclear Medicine 267
2. Training Required 269
3. Responsibilities of Radionuclide Users 270
4. Standards for Protection against Radiation 271
5. Personnel Monitoring for External Exposure 272

6. Monitoring Intakes of Radioactive Material 273
7. Airborne Radioactivity Concentration Limits 275
 - 7.1 Area Monitoring for Environmental Radioactivity 279
8. Posting of Areas 281
9. Laboratory Facilities 284
10. Protective Clothing 285
11. Trays and Handling Tools 288
12. Special Handling Precautions for Radioiodine 288
13. Hygiene 290
14. Trial Runs 290
15. Delivery of Radionuclides 290
16. Storage of Radionuclides 292
17. Storage of Wastes 292
18. Waste Disposal 293
 - 18.1 Disposal of Gases to the Atmosphere 293
 - 18.2 Disposal of Liquids to Unrestricted Areas 294
 - 18.3 Disposal of Liquid Wastes to Sewerage Systems 295
 - 18.4 Solid Wastes 297
 - 18.5 Government Regulation of the Disposal of Hazardous Wastes 299
 - 18.6 Disposal of Liquid Scintillator Wastes 300
 - 18.7 Volume Reduction in Waste Disposal 301
 - 18.8 *De Minimus* Concentrations 302
 - 18.9 Natural Radioactivity as a Reference 303
19. Use of Radioactive Materials in Animals 307
20. Transportation of Radionuclides 307
 - 20.1 Transportation within the Institution 307
 - 20.2 Mailing through the U.S. Postal Service 307
 - 20.3 Shipment of "Limited Quantities" 308
 - 20.4 Shipment of "Low-Specific-Activity" Materials 309
 - 20.5 Shipment of Type-A Packages 311
 - 20.6 Shipping Papers and Shipper's Certification 313
21. Contamination Control 313
 - 21.1 Monitoring for Contamination 314
 - 21.2 Decontamination of Equipment and Buildings 315
22. Personnel Contamination and Decontamination 315
23. Leak Tests of Sealed Sources 317
24. Notification of Authorities 317
25. Termination of Work with Radionuclides 317
 - Appendix I to Part V. Emergency Instructions 318
 - Appendix II to Part V. The Regulatory Process 320
 - Appendix III to Part V. Control of Airborne Releases to the Environment 327

PART VI. IONIZING RADIATION AND PUBLIC HEALTH

1. Formulation of Standards for Radiation Protection 334
 2. Medical Findings on Humans Exposed to Radiation 340
 - 2.1 Sources of Human Exposure Data 341
 - 2.2 Risk of Induction of Leukemia or Other Cancer 350
 - 2.3 Genetic Risks 361
 - 2.4 Production of Chromosome Aberrations 362
 3. Results of Animal Experiments 362
 4. Sources Producing Population Exposure 365
 - 4.1 Natural Sources of External Radiation 365
 - 4.2 Natural Sources of Radioactivity within the Body 368
 - 4.3 Population Exposure from External Man-Made Sources 375
 - 4.4 Population Exposure (Internal) from Radiopharmaceuticals 384
 - 4.5 Population Exposure (Internal) from Environmental Pollutants 384
 5. Population Exposure from Radiation Accidents 397
 - 5.1 Palomares, Spain 397
 - 5.2 Thule, Greenland 399
 - 5.3 Rocky Flats, Colorado 400
 - 5.4 Gabon, Africa 403
 - 5.5 Three Mile Island, Pennsylvania 403
 - 5.6 Nuclear Weapons 415
 6. Current Issues in Radiation Protection 420
-
- Appendix I. Problems 431
- Appendix II. Data on Selected Radionuclides 439
- Appendix III. Anatomical and Physiological Data for Dose Calculations 444
- Appendix IV. Some Constants and Conversion Factors 447
- Appendix V. Calculations Using Powers of Ten 448
- Selected Bibliography 451
- References 459
- Index 485
