SECTION 1: SIMULATION OF PHYSIOLOGICAL PROCESSES

- A neural network simulation and animation of a baby's learning how to move his arms 3
J.E. Vos
- Simulation of the cardiovascular mechanics during rate adaptive pacing 11
A. Urbaszek, H. Hutten & M. Schaldach
- Numerical and experimental modeling to study the effects of +Gz accelerations on the brain. Preliminary results 19
A. Guillaume, D. Gaffié, V. Chastres, P. Liébaert & P. Quandieu
- Application of a coupled BEM-FEM technique to study earmuff attenuation 31
C.-M. Lee, L.H. Royster & R.D. Ciskowski
- A finite element simulation of the operation of a nonbioprosthetic heart valve with leaflet geometry 41
D.C. Webb, K. Kormi & R.A. Etheridge
- The extended bond graph modelling and simulation method: a tool ideally suited to study cardiovascular energetics 51
J. LeFèvre, A. Tavernier & S. Durbaba
- A biomechanical model for the gravid uterus 59
B. İrfanoğlu & E. Karaesmen
- Modelling of the cerebrovascular system behavior under +Gz acceleration 67
D. Gaffie, A. Guillaume & P. Quandieu

SECTION 2: COMPUTATIONAL FLUID DYNAMICS IN BIOMEDICINE

- A transient analysis of human coronary artery blood flow 93
P.R. Johnston & D. Kilpatrick

Numerical modelling of flow-dependent dilatation in a carotid artery <i>X.Y. Xu, M.W. Collins & T.M. Griffith</i>	101
A fluid mechanics analysis of the PISA-method <i>M. Karlsson & D. Loyd</i>	109
Analysis of the effect of leaflet opening angle on fluid flow past a bileaflet mechanical heart valve <i>M.J. King, T. David & J. Fisher</i>	117
Influence of blood flow on the longitudinal impedance in arteries: a simulation study <i>S. Cavalcanti & G. Gnudi</i>	125
Computational respiratory mechanics approach to optimal artificial ventilation <i>S. Wada, M. Tanaka, T. Horikawa & H. Nakamura</i>	133
The influence of constriction size on the pulsating flow in a channel <i>M. Rosenfeld & S. Einav</i>	141
Numerical analysis of intramural stresses and blood flow in arterial bifurcation models <i>G. Rappitsch, K. Perktold & W. Guggenberger</i>	149
Computer aided parameter estimation for lung function diagnosis <i>D.J. Botes, P.J. Cilliers & G.J. Ras</i>	157
Prediction of transient wall movement of an incompressible elastic tube using a finite volume procedure <i>F.S. Henry & M.W. Collins</i>	165

SECTION 3: ELECTRICAL AND MAGNETIC SIMULATION

A three-dimensional boundary element model of the electric field from implantable defibrillators <i>T.J. Gale, D. Kilpatrick, P.R. Johnston & P.M. Nickolls</i>	175
Three-dimensional reconstruction and finite element modeling for electrical stimulation of human brainstem <i>J. Huang & J.P. Mobley</i>	183

The forward problem of electrocardiology incorporating detailed heart anatomy <i>P.R. Johnston & D. Kilpatrick</i>	191
Large scale modelling of two-dimensional cardiac tissue using parallel methods <i>N. Maglaveras, K. Margaritis, J. de Bakker, F.J.L. van Capelle, M. Allestie, M. Strintzis & C. Pappas</i>	199
 SECTION 4: ORTHOPAEDICS/BONE MECHANICS	
Development of a nonlinear finite element model for analysis of stump/socket interface stresses in below-knee amputee <i>M. Zhang & C. Roberts</i>	209
Linear versus nonlinear material modeling of the scapholunate ligament of the human wrist <i>M.D. Nowak</i>	215
The scientific problems for the creation of a knee prosthesis device <i>J.C. Junger & G. Maurice</i>	223
Model-based identification of variable response of anterior cruciate ligament: effects of knee flexion, valgus-varus rotation and stretching direction <i>M. Tanaka, Y. Kannen, M. Inoue & A. Maeda</i>	231
Bone remodeling considering residual stress: preliminary experimental observation and theoretical model development <i>M. Tanaka, T. Adachi & Y. Tomita</i>	239
Validation of finite element models of canine forelimbs before and after ulnar osteotomy using experimentally determined physiological loading <i>Z.M. Oden, R.T. Hart, D.B. Burr & M.R. Forwood</i>	247
Legg-Calve-Perthes' disease: stress distribution in the hip joint articular surface after varisation osteotomy <i>V. Antolič, V. Kralj Iglič, A. Iglič & F. Srakar</i>	255
2d and 3d modelling comparison for a human first premolar to determine an appropriate cavity filling material <i>B. Ekici, E. Güngör, M. Akyüz & S. Altintas</i>	263

SECTION 5: DATA ACQUISITION AND ANALYSIS

- Detection of periodic micro movements using a non destructive method 277
G. Villermain Lecolier, P. Billaudel, E. Perrin, B. Scherpereel, J.C. Pire & Y. Laval
- Measuring the fractal dimension of EEG signals: selection and adaptation of method for real-time analysis 285
V. Cabukovski, N. de M. Rudolf & N. Mahmood
- Ultrasonic indirect arterial wall shear rate measurement: comparison between a centre-line velocity method and curve fitting of velocity profiles. Effects of the convolution 293
A. Bensalah & P. Flaud
- Spatial resolution enhancement and image restoration for high speed video-oculographic systems 301
F. Fioravanti, P. Bruno & P. Inchingolo
- Versatile and open tools for LAN, MAN and WAN communications with PACS 309
M. Diminich, P. Inchingolo, F. Magliacca & N. Martinolli
- Generic system for the acquisition, archiving and analysis of physiological data 317
C.J. Hall & A.S. Holder
- COCIDINIS - A pediatric information system 325
P. Kokol, J. Završnik & K. Kancler
- Numerical and experimental stress analyses of bovine femur for determining the mechanical properties of calcium-phosphate ceramic as an artificial bone implant 333
B. Ekici & S. Altintas
