

CONTENTS

UNIT I

Introduction to Physiology: The Cell and General Physiology

CHAPTER 1

Functional Organization of the Human Body and Control of the "Internal Environment" 2

- Cells as the Living Units of the Body 2
- Extracellular Fluid—The Internal Environment 2
- "Homeostatic" Mechanisms of the Major Functional Systems 3
 - Homeostasis 3
 - Extracellular Fluid Transport System—The Circulatory System 3
 - Origin of Nutrients in the Extracellular Fluid 3
 - Removal of Metabolic End Products 4
 - Regulation of Body Functions 4
 - Reproduction 4
- Control Systems of the Body 4
 - Examples of Control Mechanisms 5
 - Characteristics of Control Systems 6
- Summary—Automaticity of the Body 7

CHAPTER 2

The Cell and Its Function 9

- Organization of the Cell 9
- Physical Structure of the Cell 10
 - Membranous Structures of the Cell 10
 - Cytoplasm and Its Organelles 12
 - Nucleus 14
 - Nuclear Membrane 15
 - Nucleoli and Formation of Ribosomes 15
- Comparison of the Animal Cell with Precellular Forms of Life 15
- Functional Systems of the Cell 16
 - Ingestion by the Cell—Endocytosis 16
 - Digestion of Pinocytotic and Phagocytotic Foreign Substances in the Cell—Function of the Lysosomes 17
 - Synthesis and Formation of Cellular Structures by the Endoplasmic Reticulum and the Golgi Apparatus 18
 - Extraction of Energy from Nutrients—Function of the Mitochondria—19
 - Locomotion of Cells 21

CHAPTER 3

Genetic Control of Protein Synthesis, Cell Function, and Cell Reproduction 24

- The Genes 24
 - Genetic Code 25

- The DNA Code Is Transferred to an RNA Code—The Process of Transcription 25
 - Synthesis of RNA 26
 - Assembly of the RNA Molecule from Activated Nucleotides Using the DNA Strand as a Template—The Process of Transcription 27
 - Messenger RNA—The Codons 27
 - Transfer RNA—The Anticodons 27
 - Ribosomal RNA 28
 - Formation of Proteins on the Ribosomes—The Process of "Translation" 29
- Synthesis of Other Substances in the Cell 30
- Control of Genetic Function and Biochemical Activity in Cells 30
 - Genetic Regulation 30
 - Control of Intracellular Function by Enzyme Regulation 32
- The DNA–Genetic System Also Controls Cell Reproduction 32
 - Cell Reproduction Begins with Replication of the DNA 33
 - Chromosomes and Their Replication 34
 - Cell Mitosis 34
 - Control of Cell Growth and Cell Reproduction 35
- Cell Differentiation 35
- Cancer 36

UNIT II

Membrane Physiology, Nerve, and Muscle

CHAPTER 4

Transport of Substances Through the Cell Membrane 40

- The Lipid Barrier of the Cell Membrane and Cell Membrane Transport Proteins 40
- Diffusion 40
 - Diffusion Through the Cell Membrane 41
 - Diffusion Through Protein Channels and "Gating" of These Channels 42
 - Facilitated Diffusion 43
 - Factors That Affect Net Rate of Diffusion 44
 - Osmosis Across Selectively Permeable Membranes—"Net Diffusion" of Water 45
- Active Transport 47
 - Primary Active Transport 47
 - Secondary Active Transport—Co-transport and Counter-transport 49
 - Active Transport Through Cellular Sheets 49

CHAPTER 5

Membrane Potentials and Action Potentials 52

- Basic Physics of Membrane Potentials 52
 - Membrane Potentials Caused by Diffusion* 52
 - Measuring the Membrane Potential* 53
- Resting Membrane Potential of Nerves 54
 - Origin of the Normal Resting Membrane Potential* 54
- Nerve Action Potential 55
 - Voltage-Gated Sodium and Potassium Channels* 56
 - Summary of the Events That Cause the Action Potential* 58
 - Roles of Other Ions During the Action Potential* 59
 - Initiation of the Action Potential* 59
- Propagation of the Action Potential 59
- Re-establishing Sodium and Potassium Ionic Gradients After Action Potentials Are Completed—Importance of Energy Metabolism 60
- Plateau in Some Action Potentials 61
- Rhythmicity of Some Excitable Tissues—Repetitive Discharge 61
- Special Aspects of Signal Transmission in Nerve Trunks 62
- Excitation—The Process of Eliciting the Action Potential 63
 - “Refractory Period” After an Action Potential During Which a New Stimulus Cannot Be Elicited* 64
 - Inhibition of Excitability—“Stabilizers” and Local Anesthetics* 64
- Recording Membrane Potentials and Action Potentials 64

CHAPTER 6

Contraction of Skeletal Muscle 67

- Physiologic Anatomy of Skeletal Muscle 67
 - The Skeletal Muscle Fiber* 67
- General Mechanism of Muscle Contraction 68
- Molecular Mechanism of Muscle Contraction 70
 - Molecular Characteristics of the Contractile Filaments* 70
 - Effect of Actin and Myosin Filament Overlap on Tension Developed by the Contracting Muscle* 72
 - Relation of Velocity of Contraction to Load* 73
- Energetics of Muscle Contraction 74
 - Work Output During Muscle Contraction* 74
 - Sources of Energy for Muscle Contraction* 74
- Characteristics of Whole Muscle Contraction 74
 - Mechanics of Skeletal Muscle Contraction* 76
 - Remodeling of Muscle to Match Function* 77
 - Rigor Mortis* 78

CHAPTER 7

Excitation of Skeletal Muscle: A. Neuromuscular Transmission and B. Excitation-Contraction Coupling 80

- Transmission of Impulses from Nerves to Skeletal Muscle Fibers: The Neuromuscular Junction 80
 - Secretion by Acetylcholine by the Nerve Terminals* 80
 - Molecular Biology of Acetylcholine Formation and Release* 82
 - Drugs That Affect Transmission at the Neuromuscular Junction* 83
 - Myasthenia Gravis* 83
- Muscle Action Potential 83
 - Spread of the Action Potential to the Interior of the Muscle Fiber by Way of a Transverse Tubule System* 84
- Excitation-Contraction Coupling 84

- Transverse Tubule—Sarcoplasmic Reticulum System* 84
- Release of Calcium Ions by the Sarcoplasmic Reticulum* 85

CHAPTER 8

Contraction and Excitation of Smooth Muscle 87

- Contraction of Smooth Muscle 87
 - Types of Smooth Muscle* 87
 - Contractile Mechanism in Smooth Muscle* 87
 - Regulation of Contraction by Calcium Ions* 89
- Neural and Hormonal Control of Smooth Muscle
 - Contraction 90
 - Neuromuscular Junctions of Smooth Muscle* 90
 - Membrane Potentials and Action Potentials in Smooth Muscle* 90
 - Effect of Local Tissue Factors and Hormones to Cause Smooth Muscle Contraction Without Action Potentials* 92
 - Source of Calcium Ions That Cause Contraction:*
 - (1) *Through the Cell Membrane and* (2) *from the Sarcoplasmic Reticulum* 93

UNIT III

The Heart

CHAPTER 9

Heart Muscle; The Heart as a Pump 96

- Physiology of Cardiac Muscle 96
 - Physiologic Anatomy of Cardiac Muscle* 96
 - Action Potentials in Cardiac Muscle* 97
- The Cardiac Cycle 99
 - Diastole and Systole* 99
 - Relationship of the Electrocardiogram to the Cardiac Cycle* 100
 - Function of the Atria as Primer Pumps* 100
 - Function of the Ventricles as Pumps* 100
 - Emptying of the Ventricles During Systole* 100
 - Function of the Valves* 101
 - The Aortic Pressure Curve* 101
 - Relationship of the Heart Sounds to Heart Pumping* 102
 - Work Output of the Heart* 102
 - Chemical Energy Required for Cardiac Contraction: Oxygen Utilization by the Heart* 103
- Regulation of Heart Pumping 103
 - Intrinsic Regulation of Heart Pumping—The Frank-Starling Mechanism* 103
 - Effect of Potassium and Calcium Ions on Heart Function* 106
 - Effect of Temperature on Heart Function* 106

CHAPTER 10

Rhythmical Excitation of the Heart 107

- Specialized Excitatory and Conductive System of the Heart 107
 - Sinus Node (Sinoatrial Node)* 107
 - Internodal Pathways and Transmission of the Cardiac Impulse Through the Atria* 109
 - Atrioventricular Node, and Delay of Impulse Conduction from the Atria to the Ventricles* 109
 - Rapid Transmission in the Ventricular Purkinje System* 109
 - Transmission of the Cardiac Impulse in the Ventricular Muscle* 110
 - Summary of the Spread of the Cardiac Impulse Through the Heart* 110

- Control of Excitation and Conduction in the Heart 111
The Sinus Node as the Pacemaker of the Heart 111
Role of the Purkinje System in Causing Synchronous Contraction of the Ventricular Muscle 111
Control of Heart Rhythmicity and Impulse Conduction by the Cardiac Nerves: The Sympathetic and Parasympathetic Nerves 112
- CHAPTER 11**
The Normal Electrocardiogram 114
- Characteristics of the Normal Electrocardiogram 114
Depolarization Waves Versus Repolarization Waves 114
Relationship of Atrial and Ventricular Contraction to the Waves of the Electrocardiogram 115
Voltage and Time Calibration of the Electrocardiogram 115
- Methods for Recording Electrocardiograms 116
Pen Recorder 116
- Flow of Current Around the Heart During the Cardiac Cycle 116
Recording Electrical Potentials from a Partially Depolarized Mass of Syncytial Cardiac Muscle 116
Flow of Electrical Currents in the Chest Around the Heart 116
- Electrocardiographic Leads 117
Three Bipolar Limb Leads 117
Chest Leads (Precordial Leads) 118
Augmented Unipolar Limb Leads 119
- CHAPTER 12**
Electrocardiographic Interpretation of Cardiac Muscle and Coronary Blood Flow Abnormalities: Vectorial Analysis 120
- Principles of Vectorial Analysis of Electrocardiograms 120
Use of Vectors to Represent Electrical Potentials 120
Denoting the Direction of a Vector in Terms of Degrees 120
Axis of Each of the Standard Bipolar Leads and for Each Unipolar Limb Lead 120
Vectorial Analysis of Potentials Recorded in Different Leads 121
- Vectorial Analysis of the Normal Electrocardiogram 122
Vectors That Occur at Successive Intervals During Depolarization of the Ventricles—The QRS Complex 122
Electrocardiogram During Repolarization—The T Wave 123
Depolarization of the Atria—The P Wave 124
Vectorcardiogram 124
- Mean Electrical Axis of the Ventricular QRS—And Its Significance 125
Determining the Electrical Axis from Standard Lead Electrocardiograms 125
Abnormal Ventricular Conditions That Cause Axis Deviation 125
- Conditions That Cause Abnormal Voltages of the QRS Complex 127
Increased Voltage in the Standard Bipolar Limb Leads 127
Decreased Voltage of the Electrocardiogram 127
- Prolonged and Bizarre Patterns of the QRS Complex 128
Prolonged QRS Complex as a Result of Cardiac Hypertrophy or Dilatation 128
Prolonged QRS Complex Resulting from Purkinje System Blocks 128
Conditions That Cause Bizarre QRS Complexes 128
- Current of Injury 128
Effect of Current of Injury on the QRS Complex 128
The J Point—The Zero Reference Potential for Analyzing Current of Injury 129
Coronary Ischemia as a Cause of Current of Injury 130
- Abnormalities in the T Wave 132
Effect of Slow Conduction of the Depolarization Wave on the Characteristics of the T Wave 132
Prolonged Depolarization in Portions of the Ventricular Muscle as a Cause of Abnormalities in the T Wave 132
- CHAPTER 13**
Cardiac Arrhythmias and Their Electrocardiographic Interpretation 134
- Abnormal Sinus Rhythms 134
Tachycardia 134
Bradycardia 134
Sinus Arrhythmia 134
- Abnormal Rhythms That Result from Impulse Conduction Block 135
Sinoatrial Block 135
Atrioventricular Block 135
Incomplete Intraventricular Block—Electrical Alternans 136
- Premature Contractions 136
Premature Atrial Contractions 137
A-V Nodal or A-V Bundle Premature Contractions 137
Premature Ventricular Contractions 137
- Paroxysmal Tachycardia 138
Atrial Paroxysmal Tachycardia 138
Ventricular Paroxysmal Tachycardia 138
- Ventricular Fibrillation 138
Phenomenon of Re-entry—“Circus Movements” as the Basis for Ventricular Fibrillation 139
- Atrial Fibrillation 141
Atrial Flutter 142
- Cardiac Arrest 142
- UNIT IV**
The Circulation
- CHAPTER 14**
Overview of the Circulation; Medical Physics of Pressure, Flow, and Resistance 144
- Physical Characteristics of the Circulation 144
 Basic Theory of Circulatory Function 146
 Interrelationships Among Pressure, Flow, and Resistance 146
Blood Flow 147
Blood Pressure 148
Resistance to Blood Flow 149
Effects of Pressure on Vascular Resistance and Tissue Blood Flow 151
- CHAPTER 15**
Vascular Distensibility, and Functions of the Arterial and Venous Systems 152
- Vascular Distensibility 152
Vascular Compliance (or Capacitance) 152

Volume-Pressure Curves of the Arterial and Venous Circulations 152

Delayed Compliance (Stress-Relaxation) of Vessels 153

Arterial Pressure Pulsations 153

Transmission of Pressure Pulses to the Peripheral Arteries 154

Clinical Methods for Measuring Systolic and Diastolic Pressures 155

Veins and Their Functions 156

Venous Pressures—Right Atrial Pressure (Central Venous Pressure) and Peripheral Venous Pressures 156

Blood Reservoir Function of the Veins 160

CHAPTER 16

The Microcirculation and the Lymphatic System: Capillary Fluid Exchange, Interstitial Fluid, and Lymph Flow 162

Structure of the Microcirculation and Capillary System 162

Flow of Blood in the Capillaries—Vasomotion 163

Average Function of the Capillary System 163

Exchange of Nutrients and Other Substances Between the Blood and Interstitial Fluid 164

Diffusion Through the Capillary Membrane 164

The Interstitium and Interstitial Fluid 165

Proteins in the Plasma and Interstitial Fluid Are Especially Important in Controlling Plasma and Interstitial Fluid Volumes 166

Capillary Pressure 166

Interstitial Fluid Pressure 167

Plasma Colloid Osmotic Pressure 168

Interstitial Fluid Colloid Osmotic Pressure 169

Exchange of Fluid Volume Through the Capillary Membrane 169

Starling Equilibrium for Capillary Exchange 170

Lymphatic System 170

Lymph Channels of the Body 170

Formation of Lymph 171

Rate of Lymph Flow 172

Role of the Lymphatic System in Controlling Interstitial Fluid Protein Concentration, Interstitial Fluid Volume, and Interstitial Fluid Pressure 173

CHAPTER 17

Local Control of Blood Flow by the Tissues; and Humoral Regulation 175

Local Control of Blood Flow in Response to Tissue Needs 175

Mechanisms of Blood Flow Control 175

Acute Control of Local Blood Flow 176

Long-Term Blood Flow Regulation 179

Development of Collateral Circulation—A Phenomenon of Long-Term Local Blood Flow Regulation 180

Humoral Regulation of the Circulation 181

Vasoconstrictor Agents 181

Vasodilator Agents 181

Effects of Ions and Other Chemical Factors on Vascular Control 182

CHAPTER 18

Nervous Regulation of the Circulation, and Rapid Control of Arterial Pressure 184

Nervous Regulation of the Circulation 184

Autonomic Nervous System 184

Role of the Nervous System for Rapid Control of Arterial Pressure 187

Increase in Arterial Pressure During Muscle Exercise and Other Types of Stress 188

Reflex Mechanisms for Maintaining Normal Arterial Pressure 188

Central Nervous System Ischemic Response—Control of Arterial Pressure by the Brain's Vasomotor Center in Response to Diminished Brain Blood Flow 191

Special Features of Nervous Control of Arterial Pressure 192

Role of the Skeletal Nerves and Skeletal Muscles in

Increasing Cardiac Output and Arterial Pressure 192

Respiratory Waves in the Arterial Pressure 193

Arterial Pressure “Vasomotor” Waves—Oscillation of the Pressure Reflex Control Systems 193

CHAPTER 19

Dominant Role of the Kidney in Long-Term Regulation of Arterial Pressure and in Hypertension: The Integrated System for Pressure Control 195

The Renal–Body Fluid System for Arterial Pressure Control 195

Quantitation of Pressure Diuresis as a Basis for Arterial Pressure Control 195

Hypertension (High Blood Pressure): This Is Often Caused by Excess Extracellular Fluid Volume 199

The Renin–Angiotensin System: Its Role in Pressure Control and in Hypertension 201

Components of the Renin–Angiotensin System 201

Types of Hypertension in Which Angiotensin Is Involved: Hypertension Caused by a Renin-Secreting Tumor or by Infusion of Angiotensin II 203

Other Types of Hypertension Caused by Combinations of Volume-Loading and Vasoconstriction 205

“Essential Hypertension” in Human Beings 205

Summary of the Integrated, Multifaceted System for Arterial Pressure Regulation 207

CHAPTER 20

Cardiac Output, Venous Return, and Their Regulation 210

Normal Values for Cardiac Output at Rest and During Activity 210

Control of Cardiac Output by Venous Return—Role of the Frank-Starling Mechanism of the Heart 210

Cardiac Output Regulation Is the Sum of Blood Flow Regulation in All the Local Tissues of the Body—Tissue Metabolism Regulates Most Local Blood Flow 211

The Heart Has Limits for the Cardiac Output That It Can Achieve 212

What Is the Role of the Nervous System in Controlling Cardiac Output? 212

Pathologically High and Pathologically Low Cardiac Outputs 213

- High Cardiac Output Is Almost Always Caused by Reduced Total Peripheral Resistance* 213
- Low Cardiac Output* 214
- A More Quantitative Analysis of Cardiac Output Regulation 214
- Cardiac Output Curves Used in Quantitative Analysis* 215
- Venous Return Curves* 215
- Analysis of Cardiac Output and Right Atrial Pressure, Using Simultaneous Cardiac Output and Venous Return Curves* 218
- Methods for Measuring Cardiac Output 220
 - Pulsatile Output of the Heart as Measured by an Electromagnetic or Ultrasonic Flowmeter* 220
 - Measurement of Cardiac Output by the Oxygen Fick Method* 220
 - Indicator Dilution Method* 221

CHAPTER 21

Muscle Blood Flow and Cardiac Output During Exercise; the Coronary Circulation and Ischemic Heart Disease 223

- Blood Flow in Skeletal Muscle and Its Regulation During Exercise 223
 - Rate of Blood Flow Through the Muscles* 223
 - Control of Blood Flow Through the Skeletal Muscles* 223
 - Circulatory Readjustments During Exercise* 224
- Coronary Circulation 226
 - Physiologic Anatomy of the Coronary Blood Supply* 226
 - Normal Coronary Blood Flow* 226
 - Control of Coronary Blood Flow* 227
 - Special Features of Cardiac Muscle Metabolism* 228
 - Ischemic Heart Disease* 229
 - Causes of Death After Acute Coronary Occlusion* 230
 - Stages of Recovery from Acute Myocardial Infarction* 231
 - Function of the Heart After Recovery from Myocardial Infarction* 232
 - Pain in Coronary Disease* 232
 - Surgical Treatment of Coronary Disease* 233

CHAPTER 22

Cardiac Failure 235

- Dynamics of the Circulation in Cardiac Failure 235
 - Acute Effects of Moderate Cardiac Failure* 235
 - Chronic Stage of Failure—Fluid Retention Helps to Compensate Cardiac Output* 236
 - Summary of the Changes That Occur After Acute Cardiac Failure—“Compensated Heart Failure”* 237
 - Dynamics of Severe Cardiac Failure—Decompensated Heart Failure* 237
- Unilateral Left Heart Failure 239
- Low-Output Cardiac Failure—Cardiogenic Shock 239
- Edema in Patients with Cardiac Failure 239
- Cardiac Reserve 241
- Appendix 241
 - Quantitative Graphical Method for Analysis of Cardiac Failure* 241

CHAPTER 23

Heart Valves and Heart Sounds; Dynamics of Valvular and Congenital Heart Defects 245

- Heart Sounds 245
 - Normal Heart Sounds* 245
 - Valvular Lesions* 247
- Abnormal Circulatory Dynamics in Valvular Heart Disease 248
 - Dynamics of the Circulation in Aortic Stenosis and Aortic Regurgitation* 248
 - Dynamics of Mitral Stenosis and Mitral Regurgitation* 248
 - Circulatory Dynamics During Exercise in Patients with Valvular Lesions* 249
- Abnormal Circulatory Dynamics in Congenital Heart Defects 249
 - Patent Ductus Arteriosus—A Left-to-Right Shunt* 249
 - Tetralogy of Fallot—A Right-to-Left Shunt* 251
 - Causes of Congenital Anomalies* 251
- Use of Extracorporeal Circulation During Cardiac Surgery 251
- Hypertrophy of the Heart in Valvular and Congenital Heart Disease 252

CHAPTER 24

Circulatory Shock and Physiology of Its Treatment 253

- Physiologic Causes of Shock 253
 - Circulatory Shock Caused by Decreased Cardiac Output* 253
 - Circulatory Shock That Occurs Without Diminished Cardiac Output* 253
 - What Happens to the Arterial Pressure in Circulatory Shock?* 253
 - Tissue Deterioration Is the End Stage of Circulatory Shock, Whatever the Cause* 253
 - Stages of Shock* 254
- Shock Caused by Hypovolemia—Hemorrhagic Shock 254
 - Relationship of Bleeding Volume to Cardiac Output and Arterial Pressure* 254
 - Progressive and Nonprogressive Hemorrhagic Shock* 255
 - Irreversible Shock* 258
 - Hypovolemic Shock Caused by Plasma Loss* 259
 - Hypovolemic Shock Caused by Trauma* 259
- Neurogenic Shock—Increased Vascular Capacity 259
- Anaphylactic Shock and Histamine Shock 259
- Septic Shock 260
- Physiology of Treatment in Shock 260
 - Replacement Therapy* 260
 - Treatment of Shock with Sympathomimetic Drugs—Sometimes Useful, Sometimes Not* 261
 - Other Therapy* 261
- Circulatory Arrest 261
 - Effect of Circulatory Arrest on the Brain* 261

UNIT V

The Kidneys and Body Fluids

CHAPTER 25

The Body Fluid Compartments: Extracellular and Intracellular Fluids; Interstitial Fluid and Edema 264

- Fluid Intake and Output Are Balanced During Steady-State Conditions 264

<i>Daily Intake of Water</i>	264
<i>Daily Loss of Body Water</i>	264
Body Fluid Compartments	265
Intracellular Fluid Compartment	265
Extracellular Fluid Compartment	266
Blood Volume	266
Constituents of Extracellular and Intracellular Fluids	266
<i>Ionic Compositions of Plasma and Interstitial Fluid Are Similar</i>	266
<i>Important Constituents of the Intracellular Fluid</i>	267
Measurement of Fluid Volumes in the Different Body Fluid Compartments; the Indicator-Dilution Principle	268
Determination of Volumes of Specific Body Fluid Compartments	268
Regulation of Fluid Exchange and Osmotic Equilibria Between Intracellular and Extracellular Fluid	269
Basic Principles of Osmosis and Osmotic Pressure	269
Osmotic Equilibrium Is Maintained Between Intracellular and Extracellular Fluids	271
Volumes and Osmolalities of Extracellular and Intracellular Fluid in Abnormal States	272
<i>Effect of Adding Saline Solution to the Extracellular Fluid</i>	272
Glucose and Other Solutions Administered for Nutritive Purposes	273
Clinical Abnormalities of Fluid Volume Regulation: Hyponatremia and Hypernatremia	273
<i>Causes of Hyponatremia: Excess Water or Loss of Sodium</i>	274
<i>Causes of Hypernatremia: Water Loss or Excess Sodium</i>	274
Edema: Excess Fluid in the Tissues	274
<i>Intracellular Edema</i>	274
<i>Extracellular Edema</i>	274
<i>Safety Factors That Normally Prevent Edema</i>	276
Fluids in the "Potential Spaces" of the Body	277

CHAPTER 26

Urine Formation by the Kidneys: I. Glomerular Filtration, Renal Blood Flow, and Their Control 279

Multiple Functions of the Kidneys in Homeostasis	279
Physiologic Anatomy of the Kidneys	280
<i>General Organization of the Kidneys and Urinary Tract</i>	280
<i>Renal Blood Supply</i>	281
<i>The Nephron Is the Functional Unit of the Kidney</i>	281
Urine Formation Results from Glomerular Filtration, Tubular Reabsorption, and Tubular Secretion	282
<i>Filtration, Reabsorption, and Secretion of Different Substances</i>	283
Glomerular Filtration—The First Step in Urine Formation	284
<i>Composition of the Glomerular Filtrate</i>	284
<i>GFR Is About 20 Per Cent of the Renal Plasma Flow</i>	284
<i>Glomerular Capillary Membrane</i>	284
Determinants of the Glomerular Filtration Rate	286
<i>Increased Glomerular Capillary Filtration Coefficient (K_f) Increases GFR</i>	286
<i>Increased Bowman's Capsule Hydrostatic Pressure Decreases GFR</i>	287

<i>Increased Glomerular Capillary Colloid Osmotic Pressure Decreases GFR</i>	287
<i>Increased Glomerular Capillary Hydrostatic Pressure Increases GFR</i>	287
Renal Blood Flow	288
<i>Determinants of Renal Blood Flow</i>	288
<i>Blood Flow in the Vasa Recta of the Renal Medulla Is Very Low Compared with Flow in the Renal Cortex</i>	289
Physiologic Control of Glomerular Filtration and Renal Blood Flow	289
<i>Sympathetic Nervous System Activation Decreases GFR</i>	289
<i>Hormonal and Autacoid Control of Renal Circulation</i>	289
Autoregulation of GFR and Renal Blood Flow	290
<i>Importance of GFR Autoregulation in Preventing Extreme Changes in Renal Excretion</i>	291
<i>Role of Tubuloglomerular Feedback in Autoregulation of GFR</i>	291
<i>Myogenic Autoregulation of Renal Blood Flow and GFR</i>	293
<i>Other Factors That Increase Renal Blood Flow and GFR: High Protein Intake and Increased Blood Glucose</i>	293

CHAPTER 27

Urine Formation by the Kidneys: II. Tubular Processing of the Glomerular Filtrate 295

Reabsorption and Secretion by the Renal Tubules	295
<i>Tubular Reabsorption Is Selective and Quantitatively Large</i>	295
Tubular Reabsorption Includes Passive and Active Mechanisms	295
<i>Active Transport</i>	296
<i>Passive Water Reabsorption by Osmosis Is Coupled Mainly to Sodium Reabsorption</i>	299
<i>Reabsorption of Chloride, Urea, and Other Solutes by Passive Diffusion</i>	300
Reabsorption and Secretion Along Different Parts of the Nephron	300
<i>Proximal Tubular Reabsorption</i>	300
<i>Solute and Water Transport in the Loop of Henle</i>	302
<i>Distal Tubule</i>	303
<i>Late Distal Tubule and Cortical Collecting Tubule</i>	303
<i>Medullary Collecting Duct</i>	304
<i>Summary of Concentrations of Different Solutes in the Different Tubular Segments</i>	304
Regulation of Tubular Reabsorption	305
<i>Glomerulotubular Balance—The Ability of the Tubules to Increase Reabsorption Rate in Response to Increased Tubular Load</i>	305
<i>Peritubular Capillary and Renal Interstitial Fluid Physical Forces</i>	306
<i>Effect of Arterial Pressure on Urine Output—The Pressure-Natriuresis and Pressure-Diuresis Mechanisms</i>	308
<i>Hormonal Control of Tubular Reabsorption</i>	308
Use of Clearance Methods to Quantify Kidney Function	309
<i>PAH Clearance Can Be Used to Estimate Renal Plasma Flow</i>	311
<i>Filtration Fraction Is Calculated from GFR Divided by Plasma Renal Flow</i>	311
<i>Calculation of Tubular Reabsorption or Secretion from Renal Clearances</i>	311

CHAPTER 28**Regulation of Extracellular Fluid Osmolarity and Sodium Concentration 313**

- The Kidney Excretes Excess Water by Forming a Dilute Urine 313
 - Antidiuretic Hormone Controls Urine Concentration* 313
 - Renal Mechanisms for Excreting a Dilute Urine* 313
- The Kidney Conserves Water by Excreting a Concentrated Urine 315
 - Obligatory Urine Volume* 315
 - Requirements for Excreting a Concentrated Urine—High ADH Levels and Hyperosmotic Renal Medulla* 315
 - The Countercurrent Mechanism Produces a Hyperosmotic Renal Medullary Interstitium* 315
 - Role of the Distal Tubule and Collecting Ducts in Excreting a Concentrated Urine* 317
 - Urea Contributes to Hyperosmotic Renal Medullary Interstitium and to a Concentrated Urine* 318
 - Countercurrent Exchange in the Vasa Recta Preserves Hyperosmolarity of the Renal Medulla* 319
 - Summary of Urine Concentrating Mechanism and Changes in Osmolarity in Different Segments of the Tubules* 320
- Quantifying Renal Urine Concentration and Dilution: “Free Water” and Osmolar Clearances 321
- Disorders of Urinary Concentrating Ability 322
- Control of Extracellular Fluid Osmolarity and Sodium Concentration 322
 - Estimating Plasma Osmolarity from Plasma Sodium Concentration* 322
 - Osmoreceptor-ADH Feedback System* 323
 - ADH Synthesis in Supraoptic and Paraventricular Nuclei of the Hypothalamus and ADH Release from the Posterior Pituitary* 323
 - Cardiovascular Reflex Stimulation of ADH Release by Decreased Arterial Pressure and/or Decreased Blood Volume* 324
 - Quantitative Importance of Cardiovascular Reflexes and Osmolarity in Stimulating ADH Secretion* 324
 - Other Stimuli for ADH Secretion* 324
- Role of Thirst in Controlling Extracellular Fluid Osmolarity and Sodium Concentration 325
 - Central Nervous System Centers for Thirst* 325
 - Stimuli for Thirst* 325
 - Threshold for Osmolar Stimulus of Drinking* 326
 - Integrated Responses of Osmoreceptor-ADH and Thirst Mechanisms in Controlling Extracellular Fluid Osmolarity and Sodium Concentration* 326
 - Role of Angiotensin II and Aldosterone in Controlling Extracellular Fluid Osmolarity and Sodium Concentration* 327
- Salt-Appetite Mechanism for Controlling Extracellular Fluid Sodium Concentration and Volume 327

CHAPTER 29**Integration of Renal Mechanisms for Control of Blood Volume and Extracellular Fluid Volume; and Renal Regulation of Potassium, Calcium, Phosphate, and Magnesium 329**

- Control Mechanisms for Regulating Sodium and Water Excretion 329
 - Sodium Excretion Is Precisely Matched to Intake Under Steady-State Conditions* 329

- Sodium Excretion Is Controlled by Altering Glomerular Filtration or Tubular Sodium Reabsorption Rates* 329
- Importance of Pressure Natriuresis and Pressure Diuresis in Maintaining Body Sodium and Fluid Balance 330
 - Pressure Natriuresis and Diuresis Are Key Components of a Renal–Body Fluid Feedback for Regulating Body Fluid Volumes and Arterial Pressure* 330
 - Precision of Blood Volume and Extracellular Fluid Volume Regulation* 331
- Distribution of Extracellular Fluid Between the Interstitial Spaces and Vascular System 332
- Nervous and Hormonal Factors Increase the Effectiveness of Renal–Body Fluid Feedback Control 332
 - Sympathetic Nervous System Control of Renal Excretion: The Arterial Baroreceptor and Low-Pressure Stretch Receptor Reflexes* 332
 - Role of Angiotensin II in Controlling Renal Excretion* 333
 - Role of Aldosterone in Controlling Renal Excretion* 334
 - Role of ADH in Controlling Renal Water Excretion* 334
 - Role of Atrial Natriuretic Peptide in Controlling Renal Excretion* 335
- Integrated Responses to Changes in Sodium Intake 335
- Conditions That Cause Large Increases in Blood Volume and Extracellular Fluid Volume 335
 - Increased Blood Volume and Extracellular Fluid Volume Caused by Heart Diseases* 335
 - Increased Blood Volume Caused by Increased Capacity of the Circulation* 336
- Conditions That Cause Large Increases in Extracellular Fluid Volume but with Normal Blood Volume 336
 - Nephrotic Syndrome—Loss of Plasma Proteins in the Urine and Sodium Retention by the Kidneys* 336
 - Liver Cirrhosis—Decreased Synthesis of Plasma Proteins by the Liver and Sodium Retention by the Kidneys* 336
- Regulation of Potassium Excretion and Potassium Concentration in the Extracellular Fluid 336
 - Regulation of Internal Potassium Distribution* 337
 - Overview of Renal Potassium Excretion* 338
 - Potassium Secretion in the Principal Cells of the Late Distal and Cortical Collecting Tubules* 339
 - Summary of Factors That Regulate Potassium Secretion: Plasma Potassium Concentration, Aldosterone, Tubular Flow Rate, and Hydrogen Ion* 339
- Control of Renal Calcium Excretion and Extracellular Calcium Ion Concentration 342
 - Control of Calcium Excretion by the Kidneys* 343
- Regulation of Renal Phosphate Excretion 343
- Control of Renal Magnesium Excretion and Extracellular Magnesium Ion Concentration 344

CHAPTER 30**Regulation of Acid-Base Balance 346**

- Hydrogen Ion Concentration Is Precisely Regulated 346
- Acids and Bases—Their Definitions and Meanings 346
- Defenses Against Changes in Hydrogen Ion Concentration: Buffers, Lungs, and Kidneys 347
 - Buffering of Hydrogen Ions in the Body Fluids 347
 - The Bicarbonate Buffer System 348
 - Quantitative Dynamics of the Bicarbonate Buffer System* 348
 - The Phosphate Buffer System 350
- Proteins: Important Intracellular Buffers 350

- Isohydic Principle: All Buffers in a Common Solution Are in Equilibrium with the Same Hydrogen Ion Concentration* 350
- Respiratory Regulation of Acid-Base Balance 351
- Pulmonary Expiration of CO₂ Balances Metabolic Formation of CO₂* 351
- Increasing Alveolar Ventilation Decreases Extracellular Fluid Hydrogen Ion Concentration and Raises pH* 351
- Increased Hydrogen Ion Concentration Stimulates Alveolar Ventilation* 351
- Renal Control of Acid-Base Balance 352
- Secretion of Hydrogen Ions and Reabsorption of Bicarbonate Ions by the Renal Tubule 353
- Hydrogen Ions Are Secreted by Secondary Active Transport in the Early Tubular Segments* 353
- Filtered Bicarbonate Ions Are Reabsorbed by Interaction with Hydrogen Ions in the Tubules* 354
- Primary Active Secretion of Hydrogen Ions in the Intercalated Cells of Late Distal and Collecting Tubules* 355
- Combination of Excess Hydrogen Ions With Phosphate and Ammonia Buffers in the Tubule—A Mechanism for Generating New Bicarbonate Ions 355
- The Phosphate Buffer System Carries Excess Hydrogen Ions into the Urine and Generates New Bicarbonate* 356
- Excretion of Excess Hydrogen Ions and Generation of New Bicarbonate by the Ammonia Buffer System* 356
- Quantifying Renal Acid-Base Excretion 357
- Regulation of Renal Tubular Hydrogen Ion Secretion* 357
- Renal Correction of Acidosis—Increased Excretion of Hydrogen Ions and Addition of Bicarbonate Ions to the Extracellular Fluid 358
- Acidosis Decreases the Ratio of HCO₃⁻/H⁺ in Renal Tubular Fluid* 358
- Renal Correction of Alkalosis—Decreased Tubular Secretion of Hydrogen Ions and Increased Excretion of Bicarbonate Ions 359
- Alkalosis Increases the Ratio of HCO₃⁻/H⁺ in Renal Tubular Fluid* 359
- Clinical Causes of Acid-Base Disorders 359
- Respiratory Acidosis Is Caused by Decreased Ventilation and Increased PCO₂* 359
- Respiratory Alkalosis Results from Increased Ventilation and Decreased PCO₂* 359
- Metabolic Acidosis Results from Decreased Extracellular Fluid Bicarbonate Concentration* 360
- Metabolic Alkalosis Is Caused by Increased Extracellular Fluid Bicarbonate Concentration* 360
- Treatment of Acidosis or Alkalosis 360
- Clinical Measurements and Analysis of Acid-Base Disorders 361
- Complex Acid-Base Disorders and the Use of the Acid-Base Nomogram for Diagnosis* 361
- Use of Anion Gap to Diagnose Acid-Base Disorders* 362
- CHAPTER 31**
- Micturition, Diuretics, and Kidney Diseases** 364
- Micturition 364
- Physiologic Anatomy and Nervous Connections of the Bladder 364
- Innervation of the Bladder* 364
- Transport of Urine from the Kidney Through the Ureters and Into the Bladder 364
- Filling of the Bladder and Bladder Wall Tone; The Cystometrogram 365
- Micturition Reflex 366
- Facilitation or Inhibition of Micturition by the Brain* 366
- Abnormalities of Micturition 366
- Diuretics and Their Mechanisms of Action 367
- Osmotic Diuretics Decrease Water Reabsorption by Increasing Osmotic Pressure of Tubular Fluid* 367
- “Loop” Diuretics Decrease Active Sodium-Chloride-Potassium Reabsorption in the Thick Ascending Loop of Henle* 368
- Thiazide Diuretics Inhibit Sodium-Chloride Reabsorption in the Early Distal Tubule* 368
- Carbonic Anhydrase Inhibitors Block Sodium-Bicarbonate Reabsorption in the Proximal Tubules* 368
- Competitive Inhibitors of Aldosterone Decrease Sodium Reabsorption from and Potassium Secretion into the Cortical Collecting Tubule* 368
- Diuretics That Block Sodium Channels in the Collecting Tubules Decrease Sodium Reabsorption* 368
- Kidney Diseases 369
- Acute Renal Failure 369
- Prerenal Acute Renal Failure Caused by Decreased Blood Flow to the Kidney* 369
- Intrarenal Acute Renal Failure Caused by Abnormalities Within the Kidney* 369
- Postrenal Acute Renal Failure Caused by Abnormalities of the Lower Urinary Tract* 370
- Physiologic Effects of Acute Renal Failure* 370
- Chronic Renal Failure: An Irreversible Decrease in the Number of Functional Nephrons 371
- Vicious Circle of Chronic Renal Failure Leading to End-Stage Renal Disease* 371
- Injury to the Renal Vasculature as a Cause of Chronic Renal Failure* 371
- Injury to the Glomeruli as a Cause of Chronic Renal Failure—Glomerulonephritis* 372
- Injury to the Renal Interstitium as a Cause of Chronic Renal Failure—Pyelonephritis* 373
- Nephrotic Syndrome—Excretion of Protein in the Urine Because of Increased Glomerular Permeability* 373
- Abnormal Nephron Function in Chronic Renal Failure* 373
- Effects of Renal Failure on the Body Fluids—Uremia* 375
- Hypertension and Kidney Disease* 376
- Specific Tubular Disorders 377
- Treatment of Renal Failure by Dialysis With an Artificial Kidney 377
- UNIT VI**
- Blood Cells, Immunity, and Blood Clotting**
- CHAPTER 32**
- Red Blood Cells, Anemia, and Polycythemia** 382
- Red Blood Cells (Erythrocytes) 382
- Production of Red Blood Cells* 382
- Formation of Hemoglobin* 386
- Iron Metabolism* 387
- Destruction of Red Blood Cells 389
- The Anemias 389
- Effects of Anemia on the Circulatory System 390

- Polycythemia 390
Effect of Polycythemia on the Circulatory System 390

CHAPTER 33

Resistance of the Body to Infection:

I. Leukocytes, Granulocytes, the Monocyte-Macrophage System, and Inflammation 392

- Leukocytes (White Blood Cells) 392
General Characteristics of Leukocytes 392
Genesis of the White Blood Cells 392
Life Span of the White Blood Cells 393
 Defense Properties of Neutrophils and Macrophages 393
Phagocytosis 394
 Monocyte-Macrophage System (Reticuloendothelial System) 395
 Inflammation and Role of Neutrophils and Macrophages 397
Inflammation 397
Macrophage and Neutrophil Responses During Inflammation 397
 Eosinophils 399
 Basophils 399
 Leukopenia 399
 The Leukemias 400
Effects of Leukemia on the Body 400

CHAPTER 34

Resistance of the Body to Infection: II. Immunity and Allergy 402

- Innate Immunity 402
 Acquired Immunity 402
Basic Types of Acquired Immunity 402
Both Types of Acquired Immunity Are Initiated by Antigens 402
Lymphocytes Are the Basis of Acquired Immunity 403
Preprocessing of the T and B Lymphocytes 403
T Lymphocytes and B-Lymphocyte Antibodies React Highly Specifically Against Specific Antigens—Role of Lymphocyte Clones 404
Origin of the Many Clones of Lymphocytes 405
Specific Attributes of the B-Lymphocyte System—Humoral Immunity and the Antibodies 405
Special Attributes of the T-Lymphocyte System—Activated T Cells and Cell-Mediated Immunity 408
Several Types of T Cells and Their Different Functions 409
Tolerance of the Acquired Immunity System to One's Own Tissues—Role of Preprocessing in the Thymus and Bone Marrow 410
Immunization 411
Passive Immunity 411
 Allergy and Hypersensitivity 411
Allergy Caused by Activated T Cells: Delayed-Reaction Allergy 411
Allergies in the So-Called Allergic Person, Who Has Excess IgE Antibodies 411

CHAPTER 35

Blood Groups; Transfusion; Tissue and Organ Transplantation 413

- Antigenicity Causes Immune Reactions of Blood 413
 O-A-B Blood Groups 413
A and B Antigens—Agglutinogens 413
Agglutinins 413

- Agglutination Process in Transfusion Reactions* 414
Blood Typing 414
 Rh Blood Types 415
Rh Immune Response 415
Transfusion Reactions Resulting from Mismatched Blood Types 416
 Transplantation of Tissues and Organs 416
Attempts to Overcome the Immune Reaction to Transplanted Tissue 417

CHAPTER 36

Hemostasis and Blood Coagulation 419

- Events in Hemostasis 419
Vascular Constriction 419
Formation of the Platelet Plug 419
Blood Coagulation in the Ruptured Vessel 420
Fibrous Organization or Dissolution of the Blood Clot 421
 Mechanism of Blood Coagulation 421
Conversion of Prothrombin to Thrombin 421
Conversion of Fibrinogen to Fibrin—Formation of the Clot 421
Vicious Circle of Clot Formation 422
Initiation of Coagulation: Formation of Prothrombin Activator 422
Prevention of Blood Clotting in the Normal Vascular System—The Intravascular Anticoagulants 425
Lysis of Blood Clots—Plasmin 425
 Conditions That Cause Excessive Bleeding in Human Beings 426
Decreased Prothrombin, Factor VII, Factor IX, and Factor X Caused by Vitamin K Deficiency 426
Hemophilia 426
Thrombocytopenia 426
 Thromboembolic Conditions in the Human Being 427
Femoral Venous Thrombosis and Massive Pulmonary Embolism 427
Disseminated Intravascular Coagulation 427
 Anticoagulants for Clinical Use 428
Heparin as an Intravenous Anticoagulant 428
Coumarins as Anticoagulants 428
Prevention of Blood Coagulation Outside the Body 428
 Blood Coagulation Tests 428
Bleeding Time 428
Clotting Time 428
Prothrombin Time 429

UNIT VII

Respiration

CHAPTER 37

Pulmonary Ventilation 432

- Mechanics of Pulmonary Ventilation 432
Muscles That Cause Lung Expansion and Contraction 432
Movement of Air In and Out of the Lungs—and the Pressures That Cause the Movement 432
Effect of the Thoracic Cage on Lung Expansibility 435
“Work” of Breathing 435
 Pulmonary Volumes and Capacities 436
Recording Changes in Pulmonary Volume—Spirometry 436
Abbreviations and Symbols Used in Pulmonary Function Studies 437

- Determination of Functional Residual Capacity, Residual Volume, and Total Lung Capacity—Helium Dilution Method* 437
- Minute Respiratory Volume Equals Respiratory Rate Times Tidal Volume 438
- Alveolar Ventilation 438
- Dead Space and Its Effect on Alveolar Ventilation* 439
- Rate of Alveolar Ventilation* 439
- Functions of the Respiratory Passageways 440
- Trachea, Bronchi, and Bronchioles* 440
- Normal Respiratory Functions of the Nose* 441
- Vocalization* 442
- CHAPTER 38**
- Pulmonary Circulation; Pulmonary Edema; Pleural Fluid** 444
- Physiologic Anatomy of the Pulmonary Circulatory System 444
- Pressures in the Pulmonary System 444
- Blood Volume of the Lungs 445
- Blood Flow Through the Lungs and Its Distribution 445
- Effect of Hydrostatic Pressure Gradients in the Lungs on Regional Pulmonary Blood Flow 446
- Zones 1, 2, and 3 of Pulmonary Blood Flow* 446
- Effect of Increased Cardiac Output on the Pulmonary Circulation During Heavy Exercise* 447
- Function of the Pulmonary Circulation When the Left Atrial Pressure Rises as a Result of Left-Sided Heart Failure* 447
- Pulmonary Capillary Dynamics 448
- Capillary Exchange of Fluid in the Lungs, and Pulmonary Interstitial Fluid Dynamics* 448
- Pulmonary Edema* 449
- Fluids in the Pleural Cavity 450
- CHAPTER 39**
- Physical Principles of Gas Exchange; Diffusion of Oxygen and Carbon Dioxide Through the Respiratory Membrane** 452
- Physics of Gas Diffusion and Gas Partial Pressures 452
- Molecular Basis of Gas Diffusion* 452
- Gas Pressures in a Mixture of Gases—“Partial Pressures” of Individual Gases* 452
- Pressures of Gases Dissolved in Water and Tissues* 452
- Vapor Pressure of Water* 453
- Diffusion of Gases Through Fluids—Pressure Difference Causes Net Diffusion* 453
- Diffusion of Gases Through Tissues* 454
- Composition of Alveolar Air—Its Relation to Atmospheric Air 454
- Rate at Which Alveolar Air Is Renewed by Atmospheric Air* 454
- Oxygen Concentration and Partial Pressure in the Alveoli* 455
- CO₂ Concentration and Partial Pressure in the Alveoli* 455
- Expired Air* 456
- Diffusion of Gases Through the Respiratory Membrane 456
- Factors That Affect the Rate of Gas Diffusion Through the Respiratory Membrane* 457
- Diffusing Capacity of the Respiratory Membrane* 458
- Effect of the Ventilation-Perfusion Ratio on Alveolar Gas Concentration 460
- PO₂-PCO₂, $\dot{V}A/\dot{Q}$ Diagram* 460
- Concept of “Physiologic Shunt” (When $\dot{V}A/\dot{Q}$ Is Below Normal)* 461
- Concept of “Physiologic Dead Space” (When $\dot{V}A/\dot{Q}$ Is Greater Than Normal)* 461
- Abnormalities of Ventilation-Perfusion Ratio* 461
- CHAPTER 40**
- Transport of Oxygen and Carbon Dioxide in the Blood and Body Fluids** 463
- Pressures of Oxygen and Carbon Dioxide in the Lungs, Blood, and Tissues 463
- Uptake of Oxygen by the Pulmonary Blood* 463
- Transport of Oxygen in the Arterial Blood* 464
- Diffusion of Oxygen from the Peripheral Capillaries into the Tissue Fluid* 464
- Diffusion of Oxygen from the Peripheral Tissue Capillaries to the Tissue Cells* 465
- Diffusion of Carbon Dioxide from the Peripheral Tissue Cells into the Tissue Capillaries and from the Pulmonary Capillaries into the Alveoli* 465
- Transport of Oxygen in the Blood 466
- Reversible Combination of Oxygen with Hemoglobin* 466
- Effect of Hemoglobin to “Buffer” the Tissue PO₂* 467
- Factors That Shift the Oxygen-Hemoglobin Dissociation Curve—Their Importance for Oxygen Transport* 468
- Metabolic Use of Oxygen by the Cells* 469
- Transport of Oxygen in the Dissolved State* 469
- Combination of Hemoglobin with Carbon Monoxide—Displacement of Oxygen* 469
- Transport of Carbon Dioxide in the Blood 470
- Chemical Forms in Which Carbon Dioxide Is Transported* 470
- Transport of Carbon Dioxide in the Form of Bicarbonate Ion* 470
- Carbon Dioxide Dissociation Curve* 471
- When Oxygen Binds with Hemoglobin, Carbon Dioxide Is Released—The Haldane Effect—to Increase CO₂ Transport* 471
- Change in Blood Acidity During Carbon Dioxide Transport* 472
- Respiratory Exchange Ratio 472
- CHAPTER 41**
- Regulation of Respiration** 474
- Respiratory Center 474
- Dorsal Respiratory Group of Neurons—Its Control of Inspiration and of Respiratory Rhythm* 474
- The Pneumotaxic Center Limits the Duration of Inspiration and Increases the Respiratory Rate* 475
- Ventral Respiratory Group of Neurons Functions in Both Inspiration and Expiration* 475
- Possibility of an “Apneustic Center” in the Lower Pons* 475
- Lung Inflation Signals Limit Inspiration—The Hering-Breuer Inflation Reflex* 475
- Control of Overall Respiratory Center Activity* 476
- Chemical Control of Respiration 476
- Direct Chemical Control of Respiratory Center Activity by Carbon Dioxide and Hydrogen Ions* 476
- Peripheral Chemoreceptor System for Control of Respiratory Activity—Role of Oxygen in Respiratory Control 477

<i>Composite Effects of PCO₂, pH, and PO₂ on Alveolar Ventilation</i>	479
Regulation of Respiration During Exercise	479
Other Factors That Affect Respiration	481
<i>Periodic Breathing</i>	482
CHAPTER 42	
Respiratory Insufficiency—Pathophysiology, Diagnosis, Oxygen Therapy	484
<i>Useful Methods for Studying Respiratory Abnormalities</i>	484
<i>Study of Blood Gases and Blood pH</i>	484
<i>Measurement of Maximum Expiratory Flow</i>	485
<i>Forced Expiratory Vital Capacity and Forced Expiratory Volume</i>	486
Physiologic Peculiarities of Specific Pulmonary Abnormalities	486
<i>Chronic Pulmonary Emphysema</i>	486
<i>Pneumonia</i>	488
<i>Atelectasis</i>	488
<i>Asthma</i>	489
<i>Tuberculosis</i>	489
Hypoxia and Oxygen Therapy	490
<i>Oxygen Therapy in Different Types of Hypoxia</i>	490
Hypercapnia	491
<i>Cyanosis</i>	491
<i>Dyspnea</i>	491
Artificial Respiration	492
UNIT VIII	
Aviation, Space, and Deep-Sea Diving Physiology	
CHAPTER 43	
Aviation, High-Altitude, and Space Physiology	496
Effects of Low Oxygen Pressure on the Body	496
<i>Alveolar PO₂ at Different Elevations</i>	496
<i>Effect of Breathing Pure Oxygen on Alveolar PO₂ at Different Altitudes</i>	496
<i>Acute Effects of Hypoxia</i>	497
<i>Acclimatization to Low PO₂</i>	497
<i>Natural Acclimatization of Native Human Beings Living at High Altitudes</i>	498
<i>Work Capacity at High Altitudes—The Effect of Acclimatization</i>	499
<i>Chronic Mountain Sickness</i>	499
<i>Acute Mountain Sickness and High-Altitude Pulmonary Edema</i>	499
Effects of Acceleratory Forces on the Body in Aviation and Space Physiology	500
<i>Centrifugal Acceleratory Forces</i>	500
<i>Effects of Linear Acceleratory Forces on the Body</i>	501
“Artificial Climate” in the Sealed Spacecraft	502
Weightlessness in Space	502
CHAPTER 44	
Physiology of Deep-Sea Diving and Other Hyperbaric Conditions	504
Effect of High Partial Pressures of Gases on the Body	504
<i>Oxygen Toxicity at High Pressures</i>	504

<i>Decompression of the Diver After Exposure to High Pressures</i>	506
Scuba (Self-Contained Underwater Breathing Apparatus) Diving	508
Special Physiologic Problems in Submarines	508
Hyperbaric Oxygen Therapy	509

UNIT IX

The Nervous System: A. General Principles and Sensory Physiology

CHAPTER 45	
Organization of the Nervous System; Basic Functions of Synapses and Transmitter Substances	512
General Design of the Nervous System	512
<i>The Central Nervous System Neuron—The Basic Functional Unit</i>	512
<i>Sensory Division of the Nervous System—Sensory Receptors</i>	512
<i>Motor Division—The Effectors</i>	512
<i>Processing of Information—“Integrative” Function of the Nervous System</i>	513
<i>Storage of Information—Memory</i>	514
Major Levels of Central Nervous System Function	514
<i>Spinal Cord Level</i>	514
<i>Lower Brain or Subcortical Level</i>	514
<i>Higher Brain or Cortical Level</i>	515
Comparison of the Nervous System With an Electronic Computer	515
Central Nervous System Synapses	515
<i>Types of Synapses—Chemical and Electrical</i>	515
<i>Physiologic Anatomy of the Synapse</i>	516
<i>Chemical Substances That Function as Synaptic Transmitters</i>	519
<i>Electrical Events During Neuronal Excitation</i>	521
<i>Electrical Events in Neuronal Inhibition</i>	522
<i>Special Functions of Dendrites in Exciting Neurons</i>	524
<i>Relation of State of Excitation of the Neuron to Rate of Firing</i>	525
Some Special Characteristics of Synaptic Transmission	525
CHAPTER 46	
Sensory Receptors; Neuronal Circuits for Processing Information	528
Types of Sensory Receptors and the Sensory Stimuli They Detect	528
<i>Differential Sensitivity of Receptors</i>	528
Transduction of Sensory Stimuli Into Nerve Impulses	529
<i>Local Electrical Currents at Nerve Endings—Receptor Potentials</i>	529
<i>Adaptation of Receptors</i>	531
Nerve Fibers That Transmit Different Types of Signals and Their Physiologic Classification	532
Transmission of Signals of Different Intensity in Nerve Tracts—Spatial and Temporal Summation	533
Transmission and Processing of Signals in Neuronal Pools	533
<i>Relaying of Signals Through Neuronal Pools</i>	534
<i>Prolongation of a Signal by a Neuronal Pool—“Afterdischarge”</i>	536
Instability and Stability of Neuronal Circuits	538

Inhibitory Circuits as a Mechanism for Stabilizing Nervous System Function 538

Synaptic Fatigue as a Means of Stabilizing the Nervous System 538

CHAPTER 47

Somatic Sensations: I. General Organization; the Tactile and Position Senses 540

Classification of Somatic Senses 540

Detection and Transmission of Tactile Sensations 540

Detection of Vibration 541

Tickling and Itch 542

Sensory Pathways for Transmitting Somatic Signals into the Central Nervous System 542

Dorsal Column—Medial Lemniscal System 542

Anterolateral System 542

Transmission in the Dorsal Column—Medial Lemniscal System 542

Anatomy of the Dorsal Column—Medial Lemniscal System 542

Somatosensory Cortex 544

Somatosensory Association Areas 546

Overall Characteristics of Signal Transmission and Analysis in the Dorsal Column—Medial Lemniscal System 546

Interpretation of Sensory Stimulus Intensity 548

Judgment of Stimulus Intensity 548

Position Senses 548

Transmission of Less Critical Sensory Signals in the Anterolateral Pathway 549

Anatomy of the Anterolateral Pathway 549

Some Special Aspects of Somatosensory Function 550

Function of the Thalamus in Somatic Sensation 550

Cortical Control of Sensory Sensitivity—“Corticofugal” Signals 550

Segmental Fields of Sensation—The Dermatomes 551

CHAPTER 48

Somatic Sensations: II. Pain, Headache, and Thermal Sensations 552

Types of Pain and Their Qualities—Fast Pain and Slow Pain 552

Pain Receptors and Their Stimulation 552

Rate of Tissue Damage as a Stimulus for Pain 553

Dual Transmission of Pain Signals into the Central Nervous System 553

Dual Pain Pathways in the Cord and Brain Stem—The Neospinothalamic Tract and the Paleospinothalamic Tract 554

Pain Suppression (“Analgesia”) System in the Brain and Spinal Cord 555

The Brain’s Opiate System—The Endorphins and Enkephalins 556

Inhibition of Pain Transmission by Tactile Sensory Signals 557

Treatment of Pain by Electrical Stimulation 557

Referred Pain 557

Visceral Pain 557

Causes of True Visceral Pain 557

Parietal Pain Caused by Visceral Damage 558

Localization of Visceral Pain—The “Visceral” and the “Parietal” Pain Transmission Pathways 558

Some Clinical Abnormalities of Pain and Other Somatic Sensations 559

Hyperalgesia 559

Thalamic Syndrome 559

Herpes Zoster (Shingles) 559

Tic Douloureux 559

Brown-Séquard Syndrome 560

Headache 560

Headache of Intracranial Origin 560

Extracranial Types of Headache 561

Thermal Sensations 561

Thermal Receptors and Their Excitation 561

Transmission of Thermal Signals in the Nervous System 562

UNIT X

The Nervous System: B. The Special Senses

CHAPTER 49

The Eye: I. Optics of Vision 566

Physical Principles of Optics 566

Refraction of Light 566

Application of Refractive Principles to Lenses 566

Focal Length of a Lens 567

Formation of an Image by a Convex Lens 568

Measurement of the Refractive Power of a Lens—The Diopter 569

Optics of the Eye 569

The Eye as a Camera 569

Mechanism of Accommodation 570

Pupillary Diameter 571

Errors of Refraction 571

Visual Acuity 573

Determination of Distance of an Object from the Eye—Depth Perception 574

Ophthalmoscope 574

Fluid System of the Eye—Intraocular Fluid 575

Formation of Aqueous Humor by the Ciliary Body 575

Outflow of Aqueous Humor from the Eye 576

Intraocular Pressure 576

CHAPTER 50

The Eye: II. Receptor and Neural Function of the Retina 578

Anatomy and Function of the Structural Elements of the Retina 578

Photochemistry of Vision 579

Rhodopsin-Retinal Visual Cycle, and Excitation of the Rods 580

Automatic Regulation of Retinal Sensitivity—Light and Dark Adaptation 582

Color Vision 584

Tricolor Mechanism of Color Detection 584

Color Blindness 584

Neural Function of the Retina 586

Neural Circuitry of the Retina 586

Ganglion Cells 588

Excitation of the Ganglion Cells 588

CHAPTER 51

The Eye: III. Central Neurophysiology of Vision 591

- Visual Pathways 591
 - Function of the Dorsal Lateral Geniculate Nucleus* 591
- Organization and Function of the Visual Cortex 592
 - Layered Structure of the Primary Visual Cortex* 593
 - Two Major Pathways for Analysis of Visual Information—*
 - (1) *The Fast “Position” and “Motion” Pathway*; (2) *The Accurate Color Pathway* 594
- Neuronal Patterns of Stimulation During Analysis of the Visual Image 594
 - Detection of Color* 595
 - Effect of Removing the Primary Visual Cortex* 595
- Fields of Vision; Perimetry 595
- Eye Movements and Their Control 596
 - Fixation Movements of the Eyes* 596
 - Fusion of the Visual Images from the Two Eyes* 598
- Autonomic Control of Accommodation and Pupillary Aperture 599
 - Control of Accommodation (Focusing the Eyes)* 599
 - Control of Pupillary Diameter* 600

CHAPTER 52

The Sense of Hearing 602

- Tympanic Membrane and the Ossicular System 602
 - Conduction of Sound from the Tympanic Membrane to the Cochlea* 602
 - Transmission of Sound Through Bone* 603
- The Cochlea 603
 - Functional Anatomy of the Cochlea* 603
 - Transmission of Sound Waves in the Cochlea—The “Traveling Wave”* 604
 - Function of the Organ of Corti* 605
 - Determination of Sound Frequency—The “Place” Principle* 607
 - Determination of Loudness* 607
- Central Auditory Mechanisms 608
 - Auditory Pathways* 608
 - Function of the Cerebral Cortex in Hearing* 609
 - Determination of the Direction from Which Sound Comes* 610
 - Centrifugal Signals from the Central Nervous System to Lower Auditory Centers* 611
- Hearing Abnormalities 611
 - Types of Deafness* 611

CHAPTER 53

The Chemical Senses—Taste and Smell 613

- Sense of Taste 613
 - Primary Sensations of Taste* 613
 - Taste Bud and Its Function* 614
 - Transmission of Taste Signals into the Central Nervous System* 615
 - Taste Preference and Control of the Diet* 616
- Sense of Smell 616
 - Olfactory Membrane* 616
 - Stimulation of the Olfactory Cells* 617
 - Transmission of Smell Signals into the Central Nervous System* 618

UNIT XI

The Nervous System: C. Motor and Integrative Neurophysiology

CHAPTER 54

Motor Functions of the Spinal Cord; The Cord Reflexes 622

- Organization of the Spinal Cord for Motor Functions* 622
- Muscle Sensory Receptors—Muscle Spindles and Golgi Tendon Organs—and Their Roles in Muscle Control 624
 - Receptor Function of the Muscle Spindle* 624
 - Muscle Stretch Reflex* 625
 - Role of the Muscle Spindle in Voluntary Motor Activity* 626
 - Clinical Applications of the Stretch Reflex* 627
 - Golgi Tendon Reflex* 628
 - Function of the Muscle Spindles and Golgi Tendon Organs in Conjunction with Motor Control from Higher Levels of the Brain* 628
- Flexor Reflex and the Withdrawal Reflexes 629
- Crossed Extensor Reflex 630
- Reciprocal Inhibition and Reciprocal Innervation 630
- Reflexes of Posture and Locomotion 630
 - Postural and Locomotive Reflexes of the Cord* 630
- Scratch Reflex 631
- Spinal Cord Reflexes That Cause Muscle Spasm 632
- Autonomic Reflexes in the Spinal Cord 632
- Spinal Cord Transection and Spinal Shock 632

CHAPTER 55

Cortical and Brain Stem Control of Motor Function 634

- The Motor Cortex and Corticospinal Tract 634
 - Primary Motor Cortex* 634
 - Premotor Area* 634
 - Supplementary Motor Area* 635
 - Some Specialized Areas of Motor Control Found in the Human Motor Cortex* 635
 - Transmission of Signals from the Motor Cortex to the Muscles* 636
 - Incoming Fiber Pathways to the Motor Cortex* 637
 - The Red Nucleus Serves as an Alternative Pathway for Transmitting Cortical Signals to the Spinal Cord* 637
 - “Extrapyramidal” System* 638
 - Excitation of the Spinal Cord Motor Control Areas by the Primary Motor Cortex and the Red Nucleus* 638
- Role of the Brain Stem in Controlling Motor Function 640
 - Support of the Body Against Gravity—Roles of the Reticular and Vestibular Nuclei* 640
- Vestibular Sensations and the Maintenance of Equilibrium 641
 - Vestibular Apparatus* 641
 - Function of the Utricle and Saccule in the Maintenance of Static Equilibrium* 643
 - Detection of Head Rotation by the Semicircular Ducts* 644
 - Vestibular Mechanisms for Stabilizing the Eyes* 645
 - Other Factors Concerned with Equilibrium* 645
- Functions of Brain Stem Nuclei in Controlling Subconscious, Stereotyped Movements 646

CHAPTER 56**The Cerebellum, the Basal Ganglia, and Overall Motor Control 647**

- The Cerebellum and Its Motor Functions 647
 - Anatomical Functional Areas of the Cerebellum* 647
 - Neuronal Circuit of the Cerebellum* 648
 - Function of the Cerebellum in Overall Motor Control* 652
 - Clinical Abnormalities of the Cerebellum* 655
- The Basal Ganglia—Their Motor Functions 656
 - Function of the Basal Ganglia in Executing Patterns of Motor Activity—The Putamen Circuit* 657
 - Role of the Basal Ganglia for Cognitive Control of Sequences of Motor Patterns—The Caudate Circuit* 657
 - Function of the Basal Ganglia to Change the Timing and to Scale the Intensity of Movements* 658
 - Functions of Specific Neurotransmitter Substances in the Basal Ganglial System* 659
 - Clinical Syndromes Resulting from Damage to the Basal Ganglia* 659
- Integration of the Many Parts of the Total Motor Control System 660
 - Spinal Level* 660
 - Hindbrain Level* 660
 - Motor Cortex Level* 660
 - What Drives Us to Action?* 661

CHAPTER 57**The Cerebral Cortex; Intellectual Functions of the Brain; and Learning and Memory 663**

- Physiologic Anatomy of the Cerebral Cortex 663
- Functions of Specific Cortical Areas 663
 - Association Areas* 665
 - Comprehensive Interpretative Function of the Posterior Superior Temporal Lobe—“Wernicke’s Area” (a General Interpretative Area)* 666
 - Functions of the Parieto-occipitotemporal Cortex in the Nondominant Hemisphere* 668
 - Higher Intellectual Functions of the Prefrontal Association Area* 668
- Function of the Brain in Communication—Language Input and Language Output 669
- Function of the Corpus Callosum and Anterior Commissure to Transfer Thoughts, Memories, Training, and Other Information Between the Two Cerebral Hemispheres 671
- Thoughts, Consciousness, and Memory 671
 - Memory—Roles of Synaptic Facilitation and Synaptic Inhibition—672*
 - Short-Term Memory* 673
 - Intermediate Long-Term Memory* 673
 - Long-Term Memory* 674
 - Consolidation of Memory* 675

CHAPTER 58**Behavioral and Motivational Mechanisms of the Brain—The Limbic System and the Hypothalamus 678**

- Activating-Driving Systems of the Brain 678
 - Control of Cerebral Activity by Continuous Excitatory Signals from the Brain Stem* 678
 - Neurohormonal Control of Brain Activity* 679

- The Limbic System 681
- Functional Anatomy of the Limbic System; the Key Position of the Hypothalamus 681
- The Hypothalamus, a Major Control Headquarters for the Limbic System 682
 - Vegetative and Endocrine Control Functions of the Hypothalamus* 682
 - Behavioral Functions of the Hypothalamus and Associated Limbic Structures* 684
 - “Reward” and “Punishment” Function of the Limbic System* 684
 - Importance of Reward and Punishment in Behavior* 685
- Specific Functions of Other Parts of the Limbic System 686
 - Functions of the Hippocampus* 686
 - Functions of the Amygdala* 686
 - Function of the Limbic Cortex* 687

CHAPTER 59**States of Brain Activity—Sleep; Brain Waves; Epilepsy; Psychoses 689**

- Sleep 689
 - Slow-Wave Sleep* 689
 - REM Sleep (Paradoxical Sleep, Desynchronized Sleep)* 689
 - Basic Theories of Sleep* 690
 - Physiologic Effects of Sleep* 691
- Brain Waves 691
 - Origin in the Brain of the Brain Waves* 692
 - Effect of Varying Degrees of Cerebral Activity on the Basic Frequency of the EEG* 692
 - Changes in the EEG at Different Stages of Wakefulness and Sleep* 693
- Epilepsy 693
 - Grand Mal Epilepsy* 693
 - Petit Mal Epilepsy* 694
 - Focal Epilepsy* 694
- Psychotic Behavior and Dementia—Roles of Specific Neurotransmitter Systems 694
 - Depression and Manic-Depressive Psychoses—Decreased Activity of the Norepinephrine and Serotonin Neurotransmitter Systems* 695
 - Schizophrenia—Possible Exaggerated Function of Part of the Dopamine System* 695
 - Alzheimer’s Disease—Amyloid Plaques and Depressed Memory* 695

CHAPTER 60**The Autonomic Nervous System; and the Adrenal Medulla 697**

- General Organization of the Autonomic Nervous System 697
 - Physiologic Anatomy of the Sympathetic Nervous System* 697
 - Physiologic Anatomy of the Parasympathetic Nervous System* 698
- Basic Characteristics of Sympathetic and Parasympathetic Function 699
 - Cholinergic and Adrenergic Fibers—Secretion of Acetylcholine or Norepinephrine* 699
 - Receptors on the Effector Organs* 700
 - Excitatory and Inhibitory Actions of Sympathetic and Parasympathetic Stimulation* 701
 - Effects of Sympathetic and Parasympathetic Stimulation on Specific Organs* 701

- Function of the Adrenal Medullae* 703
- Relation of Stimulus Rate to Degree of Sympathetic and Parasympathetic Effect* 704
- Sympathetic and Parasympathetic "Tone"* 704
- Denervation Supersensitivity of Sympathetic and Parasympathetic Organs After Denervation* 705
- Autonomic Reflexes 705
- Stimulation of Discrete Organs in Some Instances and Mass Stimulation in Other Instances by the Sympathetic and Parasympathetic Systems 705
- "Alarm" or "Stress" Response of the Sympathetic Nervous System* 706
- Medullary, Pontine, and Mesencephalic Control of the Autonomic Nervous System* 706
- Pharmacology of the Autonomic Nervous System 707
 - Drugs That Act on Adrenergic Effector Organs—The Sympathomimetic Drugs* 707
 - Drugs That Act on Cholinergic Effector Organs* 707
 - Drugs That Stimulate or Block Sympathetic and Parasympathetic Postganglionic Neurons* 708

CHAPTER 61

Cerebral Blood Flow; the Cerebrospinal Fluid; and Brain Metabolism 709

- Cerebral Blood Flow 709
 - Normal Rate of Cerebral Blood Flow* 709
 - Regulation of Cerebral Blood Flow* 709
 - Cerebral Microcirculation* 710
 - A Cerebral "Stroke" Occurs When Cerebral Blood Vessels Are Blocked* 711
- Cerebrospinal Fluid System 711
 - Cushioning Function of the Cerebrospinal Fluid* 711
 - Formation, Flow, and Absorption of Cerebrospinal Fluid* 711
 - Cerebrospinal Fluid Pressure* 713
 - Obstruction to the Flow of Cerebrospinal Fluid Can Cause Hydrocephalus* 713
 - Blood–Cerebrospinal Fluid and Blood–Brain Barriers* 714
 - Brain Edema* 714
- Brain Metabolism 714

UNIT XII

Gastrointestinal Physiology

CHAPTER 62

General Principles of Gastrointestinal Function—Motility, Nervous Control, and Blood Circulation 718

- General Principles of Gastrointestinal Motility 718
 - Characteristics of the Gastrointestinal Wall* 718
- Neural Control of Gastrointestinal Function—The Enteric Nervous System 720
 - Differences Between the Myenteric and Submucosal Plexuses* 720
 - Types of Neurotransmitters Secreted by the Enteric Neurons* 721
 - Hormonal Control of Gastrointestinal Motility* 722
- Functional Types of Movements in the Gastrointestinal Tract 723
 - Propulsive Movements—Peristalsis* 723
 - Mixing Movements* 723

- Gastrointestinal Blood Flow—The "Splanchnic Circulation" 724
 - Anatomy of the Gastrointestinal Blood Supply* 724
 - Effect of Gut Activity and Metabolic Factors on Gastrointestinal Blood Flow* 724
 - Nervous Control of Gastrointestinal Blood Flow* 726

CHAPTER 63

Propulsion and Mixing of Food in the Alimentary Tract 728

- Ingestion of Food 728
 - Mastication (Chewing)* 728
 - Swallowing (Deglutition)* 728
- Motor Functions of the Stomach 730
 - Storage Function of the Stomach* 731
 - Mixing and Propulsion of Food in the Stomach—The Basic Electrical Rhythm of the Stomach* 731
 - Emptying of the Stomach* 731
 - Regulation of Stomach Emptying* 732
- Movements of the Small Intestine 733
 - Mixing Contractions (Segmentation Contractions)* 733
 - Propulsive Movements* 734
 - Function of the Ileocecal Valve* 734
- Movements of the Colon 735
 - Defecation* 736
- Other Autonomic Reflexes That Affect Bowel Activity 737

CHAPTER 64

Secretory Functions of the Alimentary Tract 738

- General Principles of Alimentary Tract Secretion 738
 - Anatomical Types of Glands* 738
 - Basic Mechanisms of Stimulation of the Alimentary Tract Glands* 738
 - Basic Mechanism of Secretion by Glandular Cells* 739
 - Lubricating and Protective Properties of Mucus, and Importance of Mucus in the Gastrointestinal Tract* 740
- Secretion of Saliva 740
- Esophageal Secretion 742
- Gastric Secretion 742
 - Characteristics of the Gastric Secretions* 742
 - Regulation of Gastric Secretion by Nervous and Hormonal Mechanisms* 744
 - Stimulation of Gastric Acid Secretion* 744
 - Regulation of Pepsinogen Secretion* 744
 - Phases of Gastric Secretion* 745
 - Inhibition of Gastric Secretion by Post-Stomach Intestinal Factors* 745
 - Chemical Composition of Gastrin and Other Gastrointestinal Hormones* 746
- Pancreatic Secretion 746
 - The Pancreatic Digestive Enzymes* 746
 - Secretion of Bicarbonate Ions* 747
 - Regulation of Pancreatic Secretion* 747
- Secretion of Bile by the Liver; Functions of the Biliary Tree 749
 - Physiologic Anatomy of Biliary Secretion* 749
 - Function of Bile Salts in Fat Digestion and Absorption* 750
 - Liver Secretion of Cholesterol; and Gallstone Formation* 751
- Secretions of the Small Intestine 752
 - Secretion of Mucus by Brunner's Glands in the Duodenum* 752

- Secretion of the Intestinal Digestive Juices by the Crypts of Lieberkühn* 752
Regulation of Small Intestinal Secretion 752
 Secretions of the Large Intestine 753

CHAPTER 65**Digestion and Absorption in the Gastrointestinal Tract 754**

- Digestion of the Various Foods 754
Digestion of Carbohydrates 754
Digestion of Proteins 755
Digestion of Fats 756
 Basic Principles of Gastrointestinal Absorption 758
Anatomical Basis of Absorption 758
Basic Mechanisms of Absorption 759
 Absorption in the Small Intestine 759
Absorption of Water 759
Absorption of Ions 759
Absorption of Nutrients 761
 Absorption in the Large Intestine: Formation of Feces 762

CHAPTER 66**Physiology of Gastrointestinal Disorders 764**

- Disorders of Swallowing and of the Esophagus 764
 Disorders of the Stomach 764
Peptic Ulcer 765
 Disorders of the Small Intestine 766
Abnormal Digestion of Food in the Small Intestine—Pancreatic Failure 766
Malabsorption by the Small Intestinal Mucosa—Sprue 766
 Disorders of the Large Intestine 767
Constipation 767
Diarrhea 767
Paralysis of Defecation in Spinal Cord Injuries 767
 General Disorders of the Gastrointestinal Tract 768
Vomiting 768
Nausea 769
Gastrointestinal Obstruction 769
Gases in the Gastrointestinal Tract; “Flatus” 769

UNIT XIII**Metabolism and Temperature Regulation****CHAPTER 67****Metabolism of Carbohydrates, and Formation of Adenosine Triphosphate 772**

- Release of Energy from Foods, and the Concept of “Free Energy”* 772
Role of Adenosine Triphosphate in Metabolism 772
 Central Role of Glucose in Carbohydrate Metabolism 772
 Transport of Glucose Through the Cell Membrane 773
Effect of Insulin to Increase Facilitated Diffusion of Glucose 774
Phosphorylation of Glucose 774
 Storage of Glycogen in Liver and Muscle 774
Glycogenesis 774
Removal of Stored Glycogen—Glycogenolysis 774
 Release of Energy from the Glucose Molecule by the Glycolytic Pathway 775
Glycolysis; The Formation of Pyruvic Acid 775
Conversion of Pyruvic Acid to Acetyl Coenzyme A 775
Citric Acid Cycle 775

- Formation of Large Quantities of ATP by Oxidation of Hydrogen (the Process of Oxidative Phosphorylation)* 777

- Summary of ATP Formation During the Breakdown of Glucose* 778

- Control of Energy Release from Stored Glycogen When the Body Needs Additional Energy: Effect of ATP and ADP Concentrations in the Cell to Control the Rate of Glycolysis* 778

- Anaerobic Release of Energy—“Anaerobic Glycolysis”* 778

- Release of Energy from Glucose by the Pentose Phosphate Pathway 779

- Glucose Conversion to Glycogen or Fat* 780

- Formation of Carbohydrates from Proteins and Fats—*“Gluconeogenesis”* 780

- Blood Glucose 780

CHAPTER 68**Lipid Metabolism 781**

- Transport of Lipids in the Body Fluids 781

- Transport of Triglycerides and Other Lipids from the Gastrointestinal Tract by Lymph—The Chylomicrons* 781

- Transport of Fatty Acids in the Blood in Combination with Albumin—“Free Fatty Acid”* 782

- Lipoproteins—Their Special Function in Transporting Cholesterol and Phospholipids* 782

- Fat Deposits 782

- Adipose Tissue* 782

- Liver Lipids* 783

- Use of Triglycerides for Energy: Formation of Adenosine Triphosphate 783

- Formation of Acetoacetic Acid in the Liver and Its Transport in the Blood* 784

- Synthesis of Triglycerides from Carbohydrates* 785

- Synthesis of Triglycerides from Proteins* 786

- Regulation of Energy Release from Triglycerides 786
Obesity 787

- Phospholipids and Cholesterol 787

- Phospholipids* 787

- Cholesterol* 788

- Cellular Structural Functions of Phospholipids and Cholesterol—Especially for Membranes* 788

- Atherosclerosis 789

- Basic Causes of Atherosclerosis—The Roles of Cholesterol and Lipoproteins* 789

- Other Factors That Lead to Atherosclerosis* 789

- Prevention of Atherosclerosis* 789

CHAPTER 69**Protein Metabolism 791**

- Basic Properties 791

- Amino Acids* 791

- Transport and Storage of Amino Acids 791

- Blood Amino Acids* 791

- Storage of Amino Acids as Proteins in the Cells* 793

- Functional Roles of the Plasma Proteins 793

- Essential and Nonessential Amino Acids* 794

- Use of Proteins for Energy* 794

- Obligatory Degradation of Proteins* 795

- Hormonal Regulation of Protein Metabolism 795

CHAPTER 70**The Liver as an Organ 797**

Physiologic Anatomy of the Liver 797

The Hepatic Vascular and Lymph Systems 797

*Blood Flows Through the Liver from the Portal Vein and Hepatic Artery 797**The Liver Functions as a Blood Reservoir 798**The Liver Has Very High Lymph Flow 798**Hepatic Macrophage System Serves a Blood-Cleansing Function 798*

Metabolic Functions of the Liver 798

*Carbohydrate Metabolism 798**Fat Metabolism 799**Protein Metabolism 799**Miscellaneous Metabolic Functions of the Liver 799*

Measurement of Bilirubin in the Bile as a Clinical Diagnostic Tool 800

*Jaundice—Excess Bilirubin in the Extracellular Fluid 800***CHAPTER 71****Dietary Balances; Regulation of Feeding; Obesity and Starvation; Vitamins and Minerals 803**

Energy Intake and Output Are Balanced Under Steady-State Conditions 803

Dietary Balances 803

*Energy Available in Foods 803**Methods for Determining Metabolic Utilization of Proteins, Carbohydrates, and Fats 804*

Regulation of Food Intake and Energy Storage 804

*Neural Centers Regulate Food Intake 805**Factors That Regulate Quantity of Food Intake 806*

Obesity 807

*Abnormal Feeding Regulation as a Pathological Cause of Obesity 808**Treatment of Obesity 808*

Inanition 808

Starvation 809

Vitamins 809

*Vitamin A 809**Thiamine (Vitamin B₁) 810**Niacin 810**Riboflavin (Vitamin B₂) 810**Vitamin B₁₂ 811**Folic Acid (Pteroylglutamic Acid) 811**Pyridoxine (Vitamin B₆) 811**Pantothenic Acid 811**Ascorbic Acid (Vitamin C) 812**Vitamin D 812**Vitamin E 812**Vitamin K 812*

Mineral Metabolism 812

CHAPTER 72**Energetics and Metabolic Rate 815**

Adenosine Triphosphate (ATP) Functions as an "Energy Currency" in Metabolism 815

*Phosphocreatine Functions as an Accessory Storage Depot for Energy and as an "ATP Buffer" 816**Anaerobic Versus Aerobic Energy 816**Summary of Energy Utilization by the Cells 817*

Control of Energy Release in the Cell 817

Metabolic Rate 818

Measurement of the Whole-Body Metabolic Rate 818

Energy Metabolism—Factors That Influence Energy

Output 819

*Overall Energy Requirements for Daily Activities 819**Basal Metabolic Rate (BMR)—The Minimum Energy**Expenditure for the Body to Exist 819**Energy Used for Physical Activities 820**Energy Used for Processing Food—Thermogenic Effect of Food 821**Energy Used for Nonshivering Thermogenesis—Role of Sympathetic Stimulation 821***CHAPTER 73****Body Temperature, Temperature Regulation, and Fever 822**

Normal Body Temperature 822

Body Temperature Is Controlled by Balancing Heat Production Against Heat Loss 822

*Heat Production 822**Heat Loss 822*

Regulation of Body Temperature—Role of the Hypothalamus 826

*Neuronal Effector Mechanisms That Decrease or Increase Body Temperature 827**Concept of a "Set-Point" for Temperature Control 829**Behavioral Control of Body Temperature 830**Local Skin Temperature Reflexes 830*

Abnormalities of Body Temperature Regulation 830

*Fever 830**Exposure of the Body to Extreme Cold 832***UNIT XIV****Endocrinology and Reproduction****CHAPTER 74****Introduction to Endocrinology 836**

Coordination of Body Functions by Chemical Messengers 836

Chemical Structure and Synthesis of Hormones 836

Hormone Secretion, Transport, and Clearance from the Blood 837

*Feedback Control of Hormone Secretion 839**Transport of Hormones in the Blood 840**"Clearance" of Hormones from the Blood 840*

Mechanisms of Action of Hormones 840

*Hormone Receptors and Their Activation 840**Intracellular Signaling After Hormone Receptor Activation 841**Second Messenger Mechanisms for Mediating Intracellular Hormonal Functions 841**Hormones That Act Mainly on the Genetic Machinery of the Cell 843*

Measurement of Hormone Concentrations in the Blood 844

*Radioimmunoassay 844***CHAPTER 75****The Pituitary Hormones and Their Control by the Hypothalamus 846**

The Pituitary Gland and Its Relation to the Hypothalamus 846

The Hypothalamus Controls Pituitary Secretion 847

- Hypothalamic-Hypophysial Portal System* 848
- Physiologic Functions of Growth Hormone 849
 - Growth Hormone Promotes Growth of Many Body Tissues* 849
 - Growth Hormone Has Several Metabolic Effects* 849
 - Growth Hormone Stimulates Cartilage and Bone Growth* 850
 - Growth Hormone Exerts Much of Its Effect Through Intermediate Substances Called "Somatomedins" (Also Called "Insulin-like Growth Factors")* 851
 - Regulation of Growth Hormone Secretion* 851
 - Abnormalities of Growth Hormone Secretion* 853
- The Posterior Pituitary Gland and Its Relation to the Hypothalamus 854
 - Chemical Structures of ADH and Oxytocin* 855
 - Physiologic Functions of ADH* 855
 - Oxytocic Hormone* 856

CHAPTER 76**The Thyroid Metabolic Hormones 858**

- Synthesis and Secretion of the Thyroid Metabolic Hormones 858
 - Iodine Is Required for Formation of Thyroxine* 858
 - Iodide Pump (Iodide Trapping)* 858
 - Thyroglobulin, and Chemistry of Thyroxine and Triiodothyronine Formation* 859
 - Release of Thyroxine and Triiodothyronine from the Thyroid Gland* 859
 - Transport of Thyroxine and Triiodothyronine to the Tissues* 860
- Physiologic Functions of the Thyroid Hormones 861
 - Thyroid Hormones Increase the Transcription of Large Numbers of Genes* 861
 - Thyroid Hormones Increase Cellular Metabolic Activity* 861
 - Effect of Thyroid Hormone on Growth* 861
 - Effects of Thyroid Hormone on Specific Bodily Mechanisms* 862
- Regulation of Thyroid Hormone Secretion 864
 - Anterior Pituitary Secretion of TSH Is Regulated by Thyrotropin-Releasing Hormone from the Hypothalamus* 864
 - Feedback Effect of Thyroid Hormone to Decrease Anterior Pituitary Secretion of TSH* 865
 - Antithyroid Substances* 865
- Diseases of the Thyroid 865
 - Hyperthyroidism* 865
 - Hypothyroidism* 867

CHAPTER 77**The Adrenocortical Hormones 869**

- Synthesis and Secretion of Adrenocortical Hormones 869
- Functions of the Mineralocorticoids—Aldosterone 872
 - Renal and Circulatory Effects of Aldosterone* 872
 - Aldosterone Stimulates Sodium and Potassium Transport in Sweat Glands, Salivary Glands, and Intestinal Epithelial Cells* 873
 - Cellular Mechanism of Aldosterone Action* 873
 - Regulation of Aldosterone Secretion* 874
- Functions of the Glucocorticoids 875
 - Effects of Cortisol on Carbohydrate Metabolism* 875

- Effects of Cortisol on Protein Metabolism* 875
- Effects of Cortisol on Fat Metabolism* 876
- Cortisol Is Important in Resisting Stress and Inflammation* 876
- Other Effects of Cortisol* 878
- Cellular Mechanism of Cortisol Action* 878
- Regulation of Cortisol Secretion by Adrenocorticotrophic Hormone from the Pituitary Gland* 878
- Adrenal Androgens 880
- Abnormalities of Adrenocortical Secretion 880
 - Hypoadrenalism—Addison's Disease* 880
 - Hyperadrenalism—Cushing's Syndrome* 881
 - Primary Aldosteronism (Conn's Syndrome)* 882
 - Adrenogenital Syndrome* 883

CHAPTER 78**Insulin, Glucagon, and Diabetes Mellitus 884**

- Insulin and Its Metabolic Effects 884
 - Effect of Insulin on Carbohydrate Metabolism* 886
 - Effect of Insulin on Fat Metabolism* 887
 - Effect of Insulin on Protein Metabolism and on Growth* 889
 - Control of Insulin Secretion* 890
 - Other Factors That Stimulate Insulin Secretion* 891
 - Role of Insulin (and Other Hormones) in "Switching" Between Carbohydrate and Lipid Metabolism* 891
- Glucagon and Its Functions 891
 - Effects on Glucose Metabolism* 892
 - Regulation of Glucagon Secretion* 892
- Somatostatin Inhibits Glucagon and Insulin Secretion 893
- Summary of Blood Glucose Regulation 893
- Diabetes Mellitus 894
 - Type I Diabetes—Lack of Insulin Production by Beta Cells of the Pancreas* 894
 - Type II Diabetes—Resistance to the Metabolic Effects of Insulin* 895
 - Physiology of Diagnosis* 896
 - Treatment of Diabetes* 896
- Insulinoma—Hyperinsulinism 897

CHAPTER 79**Parathyroid Hormone, Calcitonin, Calcium and Phosphate Metabolism, Vitamin D, Bone, and Teeth 899**

- Overview of Calcium and Phosphate Regulation in the Extracellular Fluid and Plasma 899
 - Calcium in the Plasma and Interstitial Fluid* 899
 - Inorganic Phosphate in the Extracellular Fluids* 899
 - Non-bone Physiologic Effects of Altered Calcium and Phosphate Concentrations in the Body Fluids* 900
 - Absorption and Excretion of Calcium and Phosphate* 900
- Bone and Its Relation to Extracellular Calcium and Phosphate 901
 - Precipitation and Absorption of Calcium and Phosphate in Bone—Equilibrium with the Extracellular Fluids* 902
 - Calcium Exchange Between Bone and Extracellular Fluid* 902
 - Deposition and Absorption of Bone—Remodeling of Bone* 903

- Vitamin D 904
Actions of Vitamin D 905
- Parathyroid Hormone 906
Effect of Parathyroid Hormone on Calcium and Phosphate Concentrations in the Extracellular Fluid 906
Control of Parathyroid Secretion by Calcium Ion Concentration 908
- Calcitonin 908
 Summary of Control of Calcium Ion Concentration 909
- Pathophysiology of Parathyroid Hormone, Vitamin D, and Bone Disease 910
Hypoparathyroidism 910
Primary Hyperparathyroidism 910
Secondary Hyperparathyroidism 911
Rickets—Vitamin D Deficiency 911
Osteoporosis—Decreased Bone Matrix 912
- Physiology of the Teeth 912
Function of the Different Parts of the Teeth 912
Dentition 913
Mineral Exchange in Teeth 914
Dental Abnormalities 914
- CHAPTER 80**
Reproductive and Hormonal Functions of the Male (and Function of the Pineal Gland) 916
- Physiologic Anatomy of the Male Sexual Organs 916
- Spermatogenesis 916
Steps of Spermatogenesis 916
Function of the Seminal Vesicles 918
Function of the Prostate Gland 918
Semen 919
Abnormal Spermatogenesis and Male Fertility 920
- The Male Sexual Act 921
Neuronal Stimulus for Performance of the Male Sexual Act 921
Stages of the Male Sexual Act 921
- Testosterone and Other Male Sex Hormones 922
Secretion, Metabolism, and Chemistry of the Male Sex Hormone 922
Functions of Testosterone 923
Basic Intracellular Mechanism of Action of Testosterone 925
Control of Male Sexual Functions by Hormones from the Hypothalamus and Anterior Pituitary Gland 925
- Abnormalities of Male Sexual Function 926
The Prostate Gland and Its Abnormalities 926
Hypogonadism in the Male 927
Testicular Tumors and Hypergonadism in the Male 927
- The Pineal Gland—Its Function in Controlling Seasonal Fertility in Some Animals 927
- CHAPTER 81**
Female Physiology Before Pregnancy; and the Female Hormones 929
- Physiologic Anatomy of the Female Sexual Organs 929
- Female Hormonal System 929
- The Monthly Ovarian Cycle; Function of the Gonadotropic Hormones 929
Gonadotropic Hormones and Their Effects on the Ovaries 930
Ovarian Follicle Growth—The “Follicular” Phase of the Ovarian Cycle 930
- The Corpus Luteum—The “Luteal” Phase of the Ovarian Cycle* 932
Summary 933
- Functions of the Ovarian Hormones—Estradiol and Progesterone 933
Chemistry of the Sex Hormones 933
Functions of the Estrogens—Their Effects on the Primary and Secondary Female Sex Characteristics 934
Functions of Progesterone 936
The Monthly Endometrial Cycle and Menstruation 936
- Regulation of the Female Monthly Rhythm—Interplay Between the Ovarian and Hypothalamic-Pituitary Hormones 937
Feedback Oscillation of the Hypothalamic-Pituitary-Ovarian System 938
Puberty and Menarche 939
Menopause 940
- Abnormalities of Secretion by the Ovaries 940
- The Female Sexual Act 941
- Female Fertility 941
- CHAPTER 82**
Pregnancy and Lactation 944
- Maturation and Fertilization of the Ovum 944
Transport of the Fertilized Ovum in the Fallopian Tube 945
Implantation of the Blastocyst in the Uterus 945
- Early Nutrition of the Embryo 945
- Function of the Placenta 946
Developmental and Physiologic Anatomy of the Placenta 946
- Hormonal Factors in Pregnancy 948
Human Chorionic Gonadotropin and Its Effect to Cause Persistence of the Corpus Luteum and to Prevent Menstruation 948
Secretion of Estrogens by the Placenta 949
Secretion of Progesterone by the Placenta 949
Human Chorionic Somatomammotropin 949
Other Hormonal Factors in Pregnancy 950
- Response of the Mother’s Body to Pregnancy 950
- Parturition 952
Increased Uterine Excitability Near Term 952
Onset of Labor—A Positive Feedback Theory for Its Initiation 952
Abdominal Muscle Contractions During Labor 953
Mechanics of Parturition 953
Separation and Delivery of the Placenta 954
Labor Pains 954
Involution of the Uterus After Parturition 954
- Lactation 954
Development of the Breasts 954
Initiation of Lactation—Function of Prolactin 955
*Ejection (or “Let-Down”) Process in Milk Secretion—Function of Oxytocin—*956
Milk Composition and the Metabolic Drain on the Mother Caused by Lactation 956
- CHAPTER 83**
Fetal and Neonatal Physiology 958
- Growth and Functional Development of the Fetus 958
Development of the Organ Systems 958
- Adjustments of the Infant to Extrauterine Life 960
Onset of Breathing 960

<i>Circulatory Readjustments at Birth</i>	960
<i>Nutrition of the Neonate</i>	962
Special Functional Problems in the Neonate	962
<i>Respiratory System</i>	962
<i>Circulation</i>	962
<i>Fluid Balance, Acid-Base Balance, and Renal Function</i>	963
<i>Liver Function</i>	963
<i>Digestion, Absorption, Metabolism of Energy Foods, and Nutrition</i>	963
<i>Immunity</i>	964
<i>Endocrine Problems</i>	964
Special Problems of Prematurity	965
<i>Immature Development of the Premature Infant</i>	965
<i>Instability of the Homeostatic Control Systems in the Premature Infant</i>	965
<i>Danger of Blindness Caused by Excess Oxygen Therapy in the Premature Infant</i>	965
Growth and Development of the Child	965
<i>Behavioral Growth</i>	965

UNIT **XV**
Sports Physiology

CHAPTER **84**
Sports Physiology 968

<i>The Female and the Male Athlete</i>	968
The Muscles in Exercise	968
<i>Strength, Power, and Endurance of Muscles</i>	968
<i>Muscle Metabolic Systems in Exercise</i>	969
<i>Nutrients Used During Muscle Activity</i>	972
<i>Effect of Athletic Training on Muscles and Muscle Performance</i>	972
Respiration in Exercise	973
The Cardiovascular System in Exercise	975
Body Heat in Exercise	976
Body Fluids and Salt in Exercise	977
Drugs and Athletes	977
Body Fitness Prolongs Life	977
