Preface to the Second Edition x
Preface xii

Part 1 Optimization Models 1

1 One-Variable Optimization 3
1.1 The Five-Step Method 3
1.2 Sensitivity Analysis 9
1.3 Sensitivity and Robustness 14
1.4 Exercises 17
1.5 Further Reading 19

2 Multivariable Optimization 21
2.1 Unconstrained Optimization 21
2.2 Lagrange Multipliers 32
2.3 Sensitivity Analysis and Shadow Prices 44
2.4 Exercises 54
2.5 Further Reading 59

3 Computational Methods for Optimization 61
3.1 One-Variable Optimization 61
3.2 Multivariable Optimization 71
3.3 Linear Programming 83
3.4 Discrete Optimization 101
3.5 Exercises 115
3.6 Further Reading 123

Part 2 Dynamic Models 125

4 Introduction to Dynamic Models 127
4.1 Steady-State Analysis 127
4.2 Dynamical Systems 133
4.3 Discrete-Time Dynamical Systems 141
4.4 Exercises 148
4.5 Further Reading 152

5 Analysis of Dynamic Models 153
5.1 Eigenvalue Methods 153
5.2 Eigenvalue Methods for Discrete Systems 160
5.3 Phase Portraits 165
5.4 Exercises 184
5.5 Further Reading 190

6 Simulation of Dynamic Models 191
6.1 Introduction to Simulation 191
6.2 Continuous-Time Models 197
6.3 The Euler Method 203
6.4 Chaos and Fractals 212
6.5 Exercises 230
6.6 Further Reading 244

Part 3 Probability Models 247

7 Introduction to Probability Models 249
7.1 Discrete Probability Models 249
7.2 Continuous Probability Models 254

7.3 Introduction to Statistics 259
7.4 Exercises 264
7.5 Further Reading 270

8 Stochastic Models 272
8.1 Markov Chains 272
8.2 Markov Processes 283
8.3 Linear Regression 295
8.4 Exercises 304
8.5 Further Reading 312

9 Simulation of Probability Models 313
9.1 Monte Carlo Simulation 313
9.2 The Markov Property 320
9.3 Analytic Simulation 330
9.4 Exercises 339
9.5 Further Reading 343

Afterword 345
