Preface

A guide for using the volume in the classroom

Index of symbols

Contributors

Part 1. Fundamentals and Neuro-Fuzzy Signal Processing

Chapter 1.

Fuzzy Logic and Neuro-Fuzzy Systems in Medicine and Bio-Medical Engineering. A Historical Perspective

Horia-Nicolai L. Teodorescu, Abraham Kandel, and Lakhmi C. Jain

3

1. The first period: the infancy 3
2. Further developments and background 9
3. Neuro-fuzzy systems and their applications in medicine and biology 11
4. Genetic algorithms, fuzzy logic, and neuro-fuzzy systems 13
5. Bibliographies 13
6. Conclusions and predictions 15

Chapter 2.

The Brain As A Fuzzy Machine: A Modeling Problem

Robert P. Erickson, Mircea I. Chelaru, and Catalin V. Buhusi

17

1. The fuzzy approach in neurobiology: a historical perspective 18
2. The generality of Young's hypothesis 19
 - 2.1. Simple stimuli 19

- 2.2. Neural organization of cryptic events: from tastes to faces 22
 - 2.2.1. The general approach 22
 - 2.2.2. Solutions possible: Taste 22
 - 2.2.3. Solutions possible: Faces 23
- 2.3. Neural codes 24
- 3. Fuzzy models for taste 25
 - 3.1 Grades of membership in fuzzy sets 25
 - 3.2. A fuzzy model 26
 - 3.2.1. The model 26
 - 3.2.2. The synthesis of the fuzzy model 32
 - 3.2.3. Simulating the dynamics of taste neurons 32
- 4. The brain as a fuzzy machine 40
 - 4.1. A neural network implementing a fuzzy machine? 40
 - 4.2. An artificial neuron implements a fuzzy membership function 41
 - 4.3. A layer of neurons implements a fuzzifier 42
 - 4.4. A "hidden" neuron implements a fuzzy rule 45
- 5. Applications of fuzzy logic to neural systems 49
 - 5.1. Quantitative aspects of the fuzzy neural sets 49
 - 5.1.1 Neural mass 49
 - 5.1.2. Sensitivity to fine gradations in input 50
 - 5.1.3. Intelligence 50
 - 5.2. Defuzzification and responses 50
 - 5.3. Memory: input and retrieval 51
- 6. Conclusions 52
- Appendix 1. Abbreviations 53
- Appendix 2. Terminology 53
- References 54

Chapter 3

Brain State Identification and Forecasting of Acute Pathology Using Unsupervised Fuzzy Clustering Of EEG Temporal Patterns

Amir B. Geva and Dan H. Kerem

57

- 1. Introduction 57
- 2. Background 58
 - 2.1. The electroencephalogram (EEG) signal 58
 - 2.2. Brain states and the EEG 59
 - 2.3. Stimulus-evoked EEG patterns 62
 - 2.4. Underlying processes 65
 - 2.5. Fuzzy systems and the EEG 65
- 3. Tools 67
 - 3.1. Data acquisition 68

- 3.1.1. Spontaneous ongoing signal 68
- 3.1.2. Evoked responses 68
- 3.2. Feature extraction 69
 - 3.2.1. Spectrum estimation 70
 - 3.2.2. Time-frequency analysis 70
 - 3.2.2.1. Multiscale decomposition by the fast wavelet transform 70
 - 3.2.2.2. Multichannel model based decomposition by matching pursuit 71
- 3.3. The unsupervised optimal fuzzy clustering (UOFC) algorithm 71
- 3.4. The weighted fuzzy k-means (WFKM) algorithm 73
- 3.5. The clustering validity criteria 74
- 4. Examples of uses 75
 - 4.1. Sleep-stage scoring 75
 - 4.2. Forecasting epilepsy 77
 - 4.3. Classifying evoked and event-related potentials by waveform 81
- 5. Concluding remarks and future applications 84
 - 5.1. Dynamic version of state identification by UOFC 85
 - 5.2. Data fusion 85
- Appendix 1. The fast wavelet transform 86
- Appendix 2. Multichannel model-based decomposition by matching pursuit 87
- Appendix 3. Feature extraction and reduction by principal component analysis 88
- List of acronyms 91
- References 91

Chapter 4

Contouring Blood Pool Myocardial Gated SPECT Images With a Sequence of Three Techniques Based on Wavelets, Neural Networks, and Fuzzy Logic

Luis Patino, André Constantinesco, and Ernest Hirsch

95

- 1. Introduction 95
- 2. Anatomy of the G-SPECT images 96
- 3. Strategy of the proposed method 99
 - 3.1. Overview of the method 99
 - 3.2. Wavelets-based image pre-processing 99
 - 3.3. Neural network based image segmentation 100
 - 3.4. Fuzzy logic based recognition of the regions of interest (ventricles) 102
 - 3.4.1. Definition of the required fuzzy sentences 102
 - 3.4.2. Combining neuronal approaches and fuzzy logic

- based inference systems 107
- 3.5. Training the recognition system using a neuro-fuzzy technique 114
 - 3.5.1. Automated generation of rules and membership functions (ALGORAM) 114
 - 3.5.2. Adjustment of membership functions using a descent method (FUNNY) 119
 - 3.5.3. Combining the automated generation of rules and membership functions and the adjustment of their parameters in a parallel implementation (FUNNY-ALGORAM) 122
- 4. *In vitro* experiments and application to medical cases 125
 - 4.1. Experiments with phantoms 125
 - 4.2. Clinical test cases 128
 - 4.3. Implementation issues 130
- 5. Conclusions 130
- Appendix 1. Automatic determination of diastolic and systolic images 132
- Appendix 2. Trust limits of the estimated regression coefficients 133
- List of acronyms 134
- References 134

Chapter 5

Unsupervised Brain Tumor Segmentation Using Knowledge-Based and Fuzzy Techniques

Matthew C. Clark, Lawrence O. Hall, Dimitry B. Goldgof, Robert Velthuizen, Reed Murtaugh, and Martin S. Silbiger

137

- 1. Introduction 137
- 2. Domain background 139
 - 2.1. Slices of interest for the study 139
 - 2.2. Basic MR contrast principles 140
 - 2.3. Knowledge-based systems 141
 - 2.4. System overview 142
- 3. Classification stages 143
 - 3.1. Stage zero: pathology detection 143
 - 3.2. Stage one: building the intra-cranial mask 144
 - 3.3. Stage two: multi-spectral histogram thresholding 146
 - 3.4. Stage three: "Density screening" in feature space 148
 - 3.5. Stage four: region analysis and labeling 150
 - 3.5.1. Removing meningeal regions 150
 - 3.5.2. Removing non-tumor regions 151
 - 3.6. Stage five: final T1 threshold 154
- 4. Results 157
 - 4.1. Knowledge-based vs. supervised methods 160
 - 4.2. Evaluation over repeat scans 162

- 5. Discussion 162
- Abbreviations 166
- References 166

Part 2. Neuro-Fuzzy Knowledge Processing

Chapter 6

An Identification of Handling Uncertainties Within Medical Screening: A Case Study Within Screening for Breast Cancer

Fredrik Georgsson and Patrik Eklund

173

- 1. Introduction 173
- 2. Screening 174
 - 2.1. Notations 174
 - 2.2. The screening program 176
 - 2.3. The methods 177
- 3. The select function 178
 - 3.1. The decision step 179
 - 3.2. Disease specific knowledge 180
- 4. A breast cancer case study 182
 - 4.1. Minimizing A_0 as much as possible in one step 182
 - 4.2. Finding the screening method 184
 - 4.3. Defining disease specific knowledge 186
 - 4.4. Performing the refinement 188
 - 4.5. The final system 189
- 5. Conclusions and further work 191
- References 191

Chapter 7

A Fuzzy System for Dental Developmental Age Evaluation

Masao Ozaki

195

- 1. Introduction 195
- 2. Technical consideration 196
 - 2.1. Basic conception of the teeth evaluation system 196
 - 2.2. Rule evaluation module 199
- 3. System optimization by using clinical data 202
 - 3.1. Material and method 202
 - 3.2. The dimensionality analysis by principal component analysis 203
 - 3.3. System optimization by using genetic algorithm 204

- 3.4. System evaluation and results 205
- 4. Discussion and conclusions 207
- References 208

Chapter 8

Fuzzy Expert System for Myocardial Ischemia Diagnosis

Sorina Zahan, Christian Michael, and Stephanos Nikolakeas

211

- 1. Introduction 211
- 2. Fuzzy expert systems 212
- 3. DIFUS: hierarchical diagnosis fuzzy system 215
 - 3.1. Characteristics 215
 - 3.2. Knowledge organization 216
 - 3.3. Structure 218
 - 3.4. Operation 220
- 4. Multimethod myocardial ischemia diagnosis 225
- 5. Multimethod myocardial ischemia diagnosis system 226
 - 5.1. The implementation of fuzzy score-based tests 226
 - 5.1.1. Medical patterns 227
 - 5.1.2. Sequential processes 228
 - 5.1.3. Compact representation of fuzzy score-based tests 229
 - 5.2. MMIDS structure and operation 231
 - 5.2.1. MMIDS secondary group 231
 - 5.2.2. MMIDS primary groups 233
 - 5.3. Experimental results 235
- 6. Conclusions 237
- References 239

Chapter 9

Design and Tuning of Fuzzy Rule-Based Systems for Medical Diagnosis

Alexander Rotshtein

243

- 1. Introduction 243
- 2. Problem statement and general methodology 244
- 3. Design and rough tuning of fuzzy rules 247
 - 3.1. Matrix of knowledge 247
 - 3.2. Fuzzy model with discrete output 248
 - 3.3. Fuzzy model with continuous output 250
 - 3.4. Rough tuning of fuzzy rules 251
 - 3.4.1. Rough tuning of membership functions 251
 - 3.4.2. Rough tuning of rules weights 255

4. Fine tuning of fuzzy rules with continuous output 255
 - 4.1. Tuning as a problem of optimization 255
 - 4.2. Quality evaluation of fuzzy inference 258
 - 4.3. Computer simulation 258
 - 4.3.1. Experiment 1 258
 - 4.3.2. Experiment 2 262
5. Fine tuning of fuzzy rules with discrete output 266
 - 5.1. Tuning as a problem of optimization 266
 - 5.2. Quality evaluation of fuzzy inference 267
 - 5.3. Computer simulation 268
6. Application to differential diagnosis of ischemia heart disease 274
 - 6.1. Diagnosis types and parameters of patient's state 274
 - 6.2. Fuzzy rules 275
 - 6.3. Fuzzy logic equation 275
 - 6.4. Rough membership functions 279
 - 6.5. Algorithm of decision making 280
 - 6.6. Fine tuning of fuzzy rules 281
7. Conclusion 285
- References 285
- Appendix 1. Comparison of real and inferred decisions for 65 patients 286
- Appendix 2. Fuzzy expert shell and its application 288

Chapter 10

Integration of Medical Knowledge in an Expert System for Use in Intensive Care Medicine

Uwe Pilz and Lothar Engelmann

291

1. Introduction 291
2. Software design principles 292
3. Medical knowledge in intensive care medicine 293
 - 3.1. Structure of the knowledge 293
 - 3.2. Meaning of colloquial rules 294
 - 3.3. Rule processing and result calculation 295
 - 3.4. Combining different rules 298
4. Transformation of knowledge into FLORIDA commands 300
 - 4.1. Introduction 300
 - 4.2. Comments 300
 - 4.3. Modules 300
 - 4.4. Linguistic variables 301
 - 4.5. Fuzzy variables calculator 302
 - 4.6. Rules – the knowledge itself 303
 - 4.7. Changing the normal value 305
5. Invocation of FLORIDA 306

6. Explaining more of FLORIDA's functionality – the knowledge base inflammation 306
 - 6.1. Structuring the knowledge 306
 - 6.2. Rules for fever 307
 - 6.3. Rules for leukocytosis/leukopenia 308
 - 6.4. Rules for tachycardia/tachypnoe 309
 - 6.5. Rules for synthesis of acute phase proteins 309
 - 6.6. Rules for consumption of coagulation components 310
 - 6.7. Improvement of explanation 311
 7. Differentiation of dysfunctions 312
 8. Visualization of the result 313
 9. Discussion and conclusions 314
- References 314

Part 3. Neuro-Fuzzy Control and Hardware

Chapter 11

Fuzzy Control and Decision Making in Drug Delivery

Johnnie W. Huang, Claudio M. Held, and Rob J. Roy

319

1. Introduction 319
 - 1.1. Progress in decision making 320
 - 1.2. Progress in control 321
2. System development 321
 - 2.1. Decision-making: fuzzy decision-making module (FDMM) 324
 - 2.1.1. Purpose 324
 - 2.1.2. Operation 326
 - 2.2. Drug-titration control: fuzzy hemodynamic control module (FHCM) 328
 - 2.2.1. Purpose 328
 - 2.2.2. Operation 328
 - 2.3. Supervisory commands: therapeutic assessment module (TAM) 330
 - 2.4. System evaluation 332
 - 2.4.1. Example one 332
 - 2.4.2. Example two 332
3. Future prospects 335
 - 3.1. Design possibilities 335
 - 3.2. "Curse of dimensions" 335
 - 3.3. Machine intelligence 336
- Appendix. Additional resources 336
- Appendix. Terminology 337
- References 339

Chapter 12.

Neuro-Fuzzy Hardware in Medical Applications

12 A. System Requirements for Fuzzy and Neuro-Fuzzy Hardware in Medical Equipment

Horia-Nicolai Teodorescu, Abraham Kandel, and Daniel Mlynek 341

1. Introduction 341
 2. Specific requirements of medical applications 342
 - 2.1. General system and technological requirements 343
 - 2.2. Reliability requirements 344
 - 2.3. Precision and sensitivity to parameters 345
 3. Analysis of several applications 346
 - 3.1. Life-support applications 346
 - 3.1.1. Artificial heart control 346
 - 3.1.2. Assisted ventilation 346
 - 3.2. Anesthesia related equipment 347
 - 3.3. Fuzzy and neuro-fuzzy-based equipment for prosthetics 347
 - 3.4. General purpose devices 348
 - 3.5. Other applications 348
 4. General system design issues 349
 - 4.1. Nonlinearity implementation – simulation power 349
 - 4.2. Dynamical errors 350
 5. Hardware implementation issues 351
 - 5.1. Implementation choice: analog vs. digital fuzzy processors 351
 - 5.2. Hardware minimization 351
 - 5.3. Parallelism vs. number of rule blocks 352
 - 5.4. A minimal system design 355
 6. Choosing the right design 356
 7. Conclusions 356
- References 356

12. B. Neural Networks and Fuzzy-Based Integrated Circuit and System Solutions Applied to the Biomedical Field

Alexandre Schmid and Daniel Mlynek

361

1. Introduction 361
2. Required properties for embedded medical systems 363
 - 2.1. Embedding medical systems 363
 - 2.2. Autonomy 364
 - 2.3. Reliability – safety 366
 - 2.4. Precision of computation 371

2.5. Application specific requirements	371
3. Architectures applied to neuro-fuzzy IC design	371
3.1. Artificial neural network integrated realization	372
3.2. Fuzzy-based integrated realization	380
3.3. Hybrid integrated realization	384
3.4. An example of neuro-fuzzy realization	384
4. Concluding remarks	385
References	385
