393 5

<i>Preface</i>	page xv
<i>List of Notation</i>	xix
<b>I Kinematics</b>	<b>1</b>
<b>1.1 Motion</b>	<b>1</b>
<b>1.2 Frame</b>	<b>9</b>
<b>1.2.1 Changes of Frame</b>	<b>9</b>
<b>1.2.2 Equivalent Motions</b>	<b>15</b>
<b>1.3 Mass</b>	<b>18</b>
<b>1.3.1 Conservation of Mass</b>	<b>18</b>
<b>1.3.2 Transport Theorem</b>	<b>18</b>
<b>1.3.3 Differential Mass Balance</b>	<b>21</b>
<b>1.3.4 Phase Interface</b>	<b>23</b>
<b>1.3.5 Transport Theorem for a Region Containing a Dividing Surface</b>	<b>23</b>
<b>1.3.6 Jump Mass Balance for Phase Interface</b>	<b>25</b>
<b>1.3.7 Stream Functions</b>	<b>26</b>
<b>2 Foundations for Momentum Transfer</b>	<b>28</b>
<b>2.1 Force</b>	<b>28</b>
<b>2.2 Additional Postulates</b>	<b>30</b>
<b>2.2.1 Momentum and Moment of Momentum Balances</b>	<b>30</b>
<b>2.2.2 Stress Tensor</b>	<b>32</b>
<b>2.2.3 Differential and Jump Momentum Balances</b>	<b>33</b>
<b>2.2.4 Symmetry of Stress Tensor</b>	<b>35</b>
<b>2.3 Behavior of Materials</b>	<b>37</b>
<b>2.3.1 Some General Principles</b>	<b>37</b>
<b>2.3.2 Simple Constitutive Equation for Stress</b>	<b>39</b>
<b>2.3.3 Generalized Newtonian Fluid</b>	<b>43</b>
<b>2.3.4 Noll Simple Fluid</b>	<b>48</b>
<b>2.4 Summary</b>	<b>50</b>
<b>2.4.1 Differential Mass and Momentum Balances</b>	<b>50</b>
<b>2.4.2 Stream Function and the Navier–Stokes Equation</b>	<b>55</b>
<b>2.4.3 Interfacial Tension and the Jump Mass and Momentum Balances</b>	<b>58</b>

<b>3</b>	<b>Differential Balances in Momentum Transfer</b>	<b>65</b>
<b>3.1</b>	<b>Philosophy</b>	<b>66</b>
<b>3.2</b>	<b>Complete Solutions</b>	<b>67</b>
<b>3.2.1</b>	<b>Flow in a Tube</b>	<b>67</b>
<b>3.2.2</b>	<b>Flow of a Generalized Newtonian Fluid in a Tube</b>	<b>73</b>
<b>3.2.3</b>	<b>Tangential Annular Flow</b>	<b>78</b>
<b>3.2.4</b>	<b>Wall That Is Suddenly Set in Motion</b>	<b>84</b>
<b>3.2.5</b>	<b>Rotating Meniscus</b>	<b>90</b>
<b>3.3</b>	<b>Creeping Flows</b>	<b>99</b>
<b>3.3.1</b>	<b>Flow in a Cone-Plate Viscometer</b>	<b>101</b>
<b>3.3.2</b>	<b>Flow Past a Sphere</b>	<b>111</b>
<b>3.3.3</b>	<b>Thin Draining Films</b>	<b>116</b>
<b>3.3.4</b>	<b>Melt Spinning</b>	<b>121</b>
<b>3.4</b>	<b>Nonviscous Flows</b>	<b>131</b>
<b>3.4.1</b>	<b>Bernoulli Equation</b>	<b>133</b>
<b>3.4.2</b>	<b>Potential Flow Past a Sphere</b>	<b>136</b>
<b>3.4.3</b>	<b>Plane Potential Flow in a Corner</b>	<b>140</b>
<b>3.5</b>	<b>Boundary-Layer Theory</b>	<b>143</b>
<b>3.5.1</b>	<b>Plane Flow Past a Flat Plate</b>	<b>143</b>
<b>3.5.2</b>	<b>More on Plane Flow Past a Flat Plate</b>	<b>148</b>
<b>3.5.3</b>	<b>Plane Flow Past a Curved Wall</b>	<b>153</b>
<b>3.5.4</b>	<b>Solutions Found by Combination of Variables</b>	<b>158</b>
<b>3.5.5</b>	<b>Flow in a Convergent Channel</b>	<b>162</b>
<b>3.5.6</b>	<b>Flow Past a Body of Revolution</b>	<b>165</b>
<b>3.6</b>	<b>Stability</b>	<b>172</b>
<b>3.6.1</b>	<b>Stability of a Liquid Thread</b>	<b>174</b>
<b>4</b>	<b>Integral Averaging in Momentum Transfer</b>	<b>182</b>
<b>4.1</b>	<b>Time Averaging</b>	<b>182</b>
<b>4.1.1</b>	<b>Time Averages</b>	<b>183</b>
<b>4.1.2</b>	<b>The Time Average of a Time-Averaged Variable</b>	<b>185</b>
<b>4.1.3</b>	<b>Empirical Correlations for <math>T^{(t)}</math></b>	<b>186</b>
<b>4.1.4</b>	<b>Wall Turbulence in Flow Through a Tube</b>	<b>190</b>
<b>4.2</b>	<b>Area Averaging</b>	<b>194</b>
<b>4.2.1</b>	<b>Flow from Rest in a Circular Tube</b>	<b>195</b>
<b>4.3</b>	<b>Local Volume Averaging</b>	<b>197</b>
<b>4.3.1</b>	<b>The Concept</b>	<b>198</b>
<b>4.3.2</b>	<b>Theorem for the Local Volume Average of a Gradient</b>	<b>200</b>
<b>4.3.3</b>	<b>The Local Volume Average of the Differential Mass Balance</b>	<b>203</b>
<b>4.3.4</b>	<b>The Local Volume Average of the Differential Momentum Balance</b>	<b>203</b>
<b>4.3.5</b>	<b>Empirical Correlations for <math>g</math></b>	<b>205</b>
<b>4.3.6</b>	<b>Summary of Results for an Incompressible Newtonian Fluid</b>	<b>209</b>
<b>4.3.7</b>	<b>Averages of Volume-Averaged Variables</b>	<b>210</b>
<b>4.3.8</b>	<b>Flow through a Packed Tube</b>	<b>211</b>
<b>4.3.9</b>	<b>Neglecting the Divergence of the Local Volume-Averaged Extra Stress</b>	<b>215</b>

4.4	Integral Balances	217
4.4.1	The Integral Mass Balance	218
4.4.2	The Integral Mass Balance for Turbulent Flows	220
4.4.3	The Integral Momentum Balance	222
4.4.4	Empirical Correlations for $\mathcal{F}$ and $\mathcal{G}$	225
4.4.5	The Mechanical Energy Balance	229
4.4.6	Empirical Correlations for $\mathcal{E}$	234
4.4.7	Integral Moment-of-Momentum Balance	236
4.4.8	Examples	239
5	Foundations for Energy Transfer	250
5.1	Energy	250
5.1.1	Energy Balance	250
5.1.2	Radiant and Contact Energy Transmission	251
5.1.3	Differential and Jump Energy Balances	253
5.2	Entropy	256
5.2.1	Entropy Inequality	256
5.2.2	Radiant and Contact Entropy Transmission	257
5.2.3	The Differential and Jump Entropy Inequalities	259
5.3	Behavior of Materials	261
5.3.1	Implications of the Differential Entropy Inequality	261
5.3.2	Restrictions on Caloric Equation of State	270
5.3.3	Energy and Thermal Energy Flux Vectors	273
5.3.4	Stress Tensor	275
5.4	Summary of Useful Equations	277
6	Differential Balances in Energy Transfer	283
6.1	Philosophy	283
6.2	Conduction	284
6.2.1	Cooling of a Semi-Infinite Slab: Constant Surface Temperature	285
6.2.2	Cooling a Semi-Infinite Slab: Newton's "Law" of Cooling	287
6.2.3	Cooling a Flat Sheet: Constant Surface Temperature	290
6.3	More Complete Solutions	294
6.3.1	Couette Flow of a Compressible Newtonian Fluid	294
6.3.2	Couette Flow of a Compressible Newtonian Fluid with Variable Viscosity and Thermal Conductivity	302
6.3.3	Rate at Which a Fluid Freezes (or a Solid Melts)	309
6.4	When Viscous Dissipation Is Neglected	314
6.4.1	Natural Convection	316
6.5	No Convection	324
6.6	No Conduction	326
6.6.1	Speed of Propagation of Sound Waves	327
6.7	Boundary-Layer Theory	331
6.7.1	Plane Flow Past a Flat Plate	331
6.7.2	More on Plane Flow Past a Flat Plate	335
6.7.3	Plane Flow Past a Curved Wall	342
6.7.4	Flow Past a Wedge	345

6.7.5	Flow Past a Body of Revolution	349
6.7.6	Energy Transfer in the Entrance of a Heated Section of a Tube	351
6.7.7	More on Melt Spinning	359
6.8	More About Energy Transfer in a Heated Section of a Tube	361
6.8.1	Constant Temperature at Wall	362
6.8.2	Constant Energy Flux at Wall	366
7	Integral Averaging in Energy Transfer	374
7.1	Time Averaging	374
7.1.1	The Time-Averaged Differential Energy Balance	374
7.1.2	Empirical Correlation for the Turbulent Energy Flux	375
7.1.3	Turbulent Energy Transfer in a Heated Section of a Tube	378
7.2	Area Averaging	382
7.2.1	A Straight Cooling Fin of Rectangular Profile	383
7.3	Local Volume Averaging	386
7.3.1	The Local Volume Average of the Differential Energy Balance	387
7.3.2	Empirical Correlations for $h$	389
7.3.3	Summary of Results for a Nonoriented, Uniform-Porosity Structure	392
7.3.4	Transpiration Cooling	394
7.4	More on Integral Balances	399
7.4.1	The Integral Energy Balance	399
7.4.2	Empirical Correlations for $\dot{Q}$	407
7.4.3	More About the Mechanical Energy Balance	410
7.4.4	The Integral Entropy Inequality	417
7.4.5	Integral Entropy Inequality for Turbulent Flows	418
7.4.6	Example	418
8	Foundations for Mass Transfer	423
8.1	Viewpoint	423
8.1.1	Body, Motion, and Material Coordinates	424
8.2	Species Mass Balance	426
8.2.1	Differential and Jump Balances	426
8.2.2	Concentration, Velocities, and Mass Fluxes	428
8.3	Revised Postulates	430
8.3.1	Conservation of Mass	432
8.3.2	Momentum Balance	433
8.3.3	Moment of Momentum Balance	434
8.3.4	Energy Balance	435
8.3.5	Entropy Inequality	435
8.4	Behavior	436
8.4.1	Implications of the Differential Entropy Inequality	437
8.4.2	Restrictions on Caloric Equation of State	442
8.4.3	Energy Flux Vectors	449
8.4.4	Mass Flux Vector	451
8.4.5	Mass Flux Vector in Binary Solutions	459
8.4.6	Mass Flux Vector: Limiting Cases in Ideal Solutions	462

8.4.7	Constitutive Equations for the Stress Tensor	464
8.4.8	Rates of Reactions	464
8.5	Summary	472
8.5.1	Summary of Useful Equations for Mass Transfer	472
8.5.2	Summary of Useful Equations for Energy Transfer	477
9	Differential Balances in Mass Transfer	482
9.1	Philosophy of Solving Mass-Transfer Problems	482
9.2	Energy and Mass Transfer Analogy	483
9.2.1	Film Theory	485
9.3	Complete Solutions for Binary Systems	488
9.3.1	Unsteady-State Evaporation	489
9.3.2	Rate of Isothermal Crystallization	501
9.3.3	Rate of Nonisothermal Crystallization	507
9.3.4	Silicon Oxidation	513
9.3.5	Pressure Diffusion in a Natural Gas Well	515
9.3.6	Forced Diffusion in Electrochemical Systems	520
9.3.7	Film Theory: Condensation of Mixed Vapors	525
9.3.8	Two- and Three-Dimensional Problems	532
9.4	Complete Solutions for Multicomponent Systems	533
9.4.1	Film Theory: Steady-State Evaporation	533
9.4.2	More on Unsteady-State Evaporation	537
9.4.3	Oxidation of Iron	545
9.5	Boundary-Layer Theory	557
9.5.1	Plane Flow Past a Flat Plate	558
9.5.2	Flow Past Curved Walls and Bodies of Revolution	561
9.6	Forced Convection in Dilute Solutions	561
9.6.1	Unsteady-State Diffusion with a First-Order Homogeneous Reaction	562
9.6.2	Gas Absorption in a Falling Film with Chemical Reaction	566
10	Integral Averaging in Mass Transfer	573
10.1	Time Averaging	573
10.1.1	The Time-Averaged Differential Mass Balance for Species A	573
10.1.2	Empirical Correlations for the Turbulent Mass Flux	575
10.1.3	Turbulent Diffusion from a Point Source in a Moving Stream	576
10.2	Area Averaging	580
10.2.1	Longitudinal Dispersion	580
10.3	Local Volume Averaging	585
10.3.1	Local Volume Average of the Differential Mass Balance for Species A	585
10.3.2	When Fick's First Law Applies	586
10.3.3	Empirical Correlations for Tortuosity Vectors	588
10.3.4	Summary of Results for a Liquid or Dense Gas in a Nonoriented, Uniform-Porosity Structure	592
10.3.5	When Fick's First Law Does Not Apply	593
10.3.6	Knudsen Diffusion	595

10.3.7	The Local Volume Average of the Overall Differential <i>Mass Balance</i>	597
10.3.8	The Effectiveness Factor for Spherical Catalyst Particles	597
10.4	Still More on Integral Balances	603
10.4.1	The Integral Mass Balance for Species A	604
10.4.2	Empirical Correlations for $\mathcal{J}_{(A)}$	606
10.4.3	The Integral Overall Balances	609
10.4.4	Example	614
A	Tensor Analysis	619
A.1	Spatial Vectors	619
A.1.1	Definition**	619
A.1.2	Position Vectors	621
A.1.3	Spatial Vector Fields	621
A.1.4	Basis	622
A.1.5	Basis for the Spatial Vector Fields	624
A.1.6	Basis for the Spatial Vectors	625
A.1.7	Summation Convention	626
A.2	Determinant	627
A.2.1	Definitions	627
A.3	Gradient of Scalar Field	630
A.3.1	Definition**	630
A.4	Curvilinear Coordinates	632
A.4.1	Natural Basis**	632
A.4.2	Dual Basis*	638
A.4.3	Covariant and Contravariant Components*	641
A.5	Second-Order Tensors	644
A.5.1	Components of Second-Order Tensor Fields	645
A.5.2	Transpose of a Second-Order Tensor Field**	650
A.5.3	Inverse of a Second-Order Tensor Field	654
A.5.4	Trace of a Second-Order Tensor Field**	655
A.6	Gradient of Vector Field	657
A.6.1	Definition**	657
A.6.2	Covariant Differentiation*	658
A.7	Third-Order Tensors	664
A.7.1	Definition	664
A.7.2	Components of Third-Order Tensor Fields	665
A.7.3	Another View of Third-Order Tensor Fields	668
A.8	Gradient of Second-Order Tensor Field	669
A.8.1	Definition	669
A.8.2	More on Covariant Differentiation*	670
A.9	Vector Product and Curl	673
A.9.1	Definitions**	673
A.9.2	More on the Vector Product and Curl	674
A.10	Determinant of Second-Order Tensor	677
A.10.1	Definition	677

<b>A.11</b>	<b>Integration</b>	679
<b>A.11.1</b>	<b>Spatial Vector Fields**</b>	679
<b>A.11.2</b>	<b>Green's Transformation</b>	680
<b>A.11.3</b>	<b>Change of Variable in Volume Integrations**</b>	683
<b>B</b>	<b>More on the Transport Theorem</b>	685
	<i>References</i>	687
