3938

1. Introduction 1
- * The continuum postulate, 1. * Types of flow, 3. * The solution of flow problems, 6. Units, 10. * Fluid properties, 12. * Vectors, 22. Problems, 28.*
2. Fluid Statics and One-Dimensional Laminar Flow 32
- * The material volume, 32. * Fluid statics, 36. Barometers, 43. Manometers, 44. * Forces on submerged plane surfaces, 46. * Forces on submerged curved surfaces, 49. * Buoyancy forces, 53. One-dimensional laminar flows, 56. Problems, 68.*
3. Kinematics 75
- * Material and spatial coordinates, 76. * Time derivatives, 77. * The divergence theorem, 84. * The transport theorem, 88. * Conservation of mass, 92. * Streamlines, path lines, and streak lines, 97. Problems, 104.*

* Sections marked with an asterisk must be covered if subsequent material is to be understood.

4. Stress in a Fluid 107
- * The stress vector, 107. * The stress tensor, 110. * Symmetry of the stress tensor, 119. * The stress equations of motion, 121. Problems, 124.*
5. The Differential Equations of Motion 128
- * The viscous stress tensor, 128. † Newton's law of viscosity, 134. ‡ Qualitative description of the rate of strain, 147. * The equations of motion, 153. * Dimensional analysis, 158. * Applications of the differential equations of motion, 166. Problems, 179.*
6. Turbulent Flow 186
- * Time averages, 187. * Time-averaged equations of continuity and motion, 189. * A qualitative description of turbulent flow, 195. The eddy viscosity, 200. Turbulent flow in a tube, 203. Relative magnitude of molecular and eddy viscosity, 207. Problems, 209.*
7. Macroscopic Balances: Inertial Effects 211
- * The macroscopic mass balance, 212. * The macroscopic momentum balance, 217. * The macroscopic mechanical energy balance, 221. * Bernoulli's equation, 230. Sudden expansion in a pipeline, 235. Sudden contraction in a pipeline, 244. The nozzle and the Borda mouthpiece, 247. Applications of the momentum balance, 254. Moving control volumes and unsteady flow problems, 261. Differential-macroscopic balances, 273. Problems, 275.*
8. Macroscopic Balances: Viscous Effects 285
- * Friction factors: definition, 285. * Friction factors: experimental, 293. Pipeline systems, 306. Unsteady flow in closed conduits, 320. Flow rate measurement, 331. Problems, 341.*
9. Open Channel Flow 348
- Uniform flow, 349. Gradually varied flow, 355. The solitary wave, 370. Flow over bumps, crests, and weirs, 377. Hydraulic jump, 382. Problems, 386.*

† The general form of Newton's law of viscosity is listed in the previous section.

‡ This section requires supplementary discussion if it is presented independently of the previous section.

10. Compressible Flow 390

The governing equations for compressible flow, 390. The thermal energy equation and the entropy equation, 395. The speed of sound, 398. Isentropic nozzle flow, 404. Shock waves, 416. Problems, 419.

11. Flow Around Immersed Bodies 421

Description of flow, 421. The suddenly accelerated flat plate, 422. The boundary layer on a flat plate, 430. External flows and wakes, 440. Problems, 453.
