1.	Mathematical Preliminaries.....	1
1.1	Mathematical Concepts and Notations	2
1.1.1	Vector Space Concepts	2
1.1.2	Matrix Notations	8
1.1.3	Eigenvectors and Eigenvalues of Matrices	11
1.1.4	Further Properties of Matrices	13
1.1.5	On Matrix Differential Calculus	15
1.2	Distance Measures for Patterns.....	17
1.2.1	Measures of Similarity and Distance in Vector Spaces .	17
1.2.2	Measures of Similarity and Distance Between Symbol Strings.....	21
1.2.3	Averages Over Nonvectorial Variables	28
1.3	Statistical Pattern Analysis	29
1.3.1	Basic Probabilistic Concepts	29
1.3.2	Projection Methods.....	34
1.3.3	Supervised Classification	39
1.3.4	Unsupervised Classification	44
1.4	The Subspace Methods of Classification	46
1.4.1	The Basic Subspace Method	46
1.4.2	Adaptation of a Model Subspace to Input Subspace...	49
1.4.3	The Learning Subspace Method (LSM).....	53
1.5	Vector Quantization	59
1.5.1	Definitions	59
1.5.2	Derivation of the VQ Algorithm	60
1.5.3	Point Density in VQ	62
1.6	Dynamically Expanding Context	64
1.6.1	Setting Up the Problem	65
1.6.2	Automatic Determination of Context-Independent Productions	66
1.6.3	Conflict Bit	67
1.6.4	Construction of Memory for the Context-Dependent Productions	68
1.6.5	The Algorithm for the Correction of New Strings	68
1.6.6	Estimation Procedure for Unsuccessful Searches	69

1.6.7	Practical Experiments	69
2.	Neural Modeling	71
2.1	Models, Paradigms, and Methods	71
2.2	A History of Some Main Ideas in Neural Modeling	72
2.3	Issues on Artificial Intelligence	75
2.4	On the Complexity of Biological Nervous Systems	76
2.5	What the Brain Circuits Are Not	78
2.6	Relation Between Biological and Artificial Neural Networks	79
2.7	What Functions of the Brain Are Usually Modeled?	81
2.8	When Do We Have to Use Neural Computing?	81
2.9	Transformation, Relaxation, and Decoder	82
2.10	Categories of ANNs	85
2.11	A Simple Nonlinear Dynamic Model of the Neuron	87
2.12	Three Phases of Development of Neural Models	89
2.13	Learning Laws	91
2.13.1	Hebb's Law	91
2.13.2	The Riccati-Type Learning Law	92
2.13.3	The PCA-Type Learning Law	95
2.14	Some Really Hard Problems	96
2.15	Brain Maps	99
3.	The Basic SOM	105
3.1	A Qualitative Introduction to the SOM	106
3.2	The Original Incremental SOM Algorithm	109
3.3	The "Dot-Product SOM"	115
3.4	Other Preliminary Demonstrations of Topology-Preserving Mappings	116
3.4.1	Ordering of Reference Vectors in the Input Space	116
3.4.2	Demonstrations of Ordering of Responses in the Output Space	120
3.5	Basic Mathematical Approaches to Self-Organization	127
3.5.1	One-Dimensional Case	128
3.5.2	Constructive Proof of Ordering of Another One-Dimensional SOM	132
3.6	The Batch Map	138
3.7	Initialization of the SOM Algorithms	142
3.8	On the "Optimal" Learning-Rate Factor	143
3.9	Effect of the Form of the Neighborhood Function	145
3.10	Does the SOM Algorithm Ense from a Distortion Measure?	146
3.11	An Attempt to Optimize the SOM	148
3.12	Point Density of the Model Vectors	152
3.12.1	Earlier Studies	152

3.12.2 Numerical Check of Point Densities in a Finite One-Dimensional SOM	153
3.13 Practical Advice for the Construction of Good Maps	159
3.14 Examples of Data Analyses Implemented by the SOM.....	161
3.14.1 Attribute Maps with Full Data Matrix	161
3.14.2 Case Example of Attribute Maps Based on Incomplete Data Matrices (Missing Data): “Poverty Map”	165
3.15 Using Gray Levels to Indicate Clusters in the SOM	165
3.16 Interpretation of the SOM Mapping	166
3.16.1 “Local Principal Components”	166
3.16.2 Contribution of a Variable to Cluster Structures.....	169
3.17 Speedup of SOM Computation	170
3.17.1 Shortcut Winner Search	170
3.17.2 Increasing the Number of Units in the SOM	172
3.17.3 Smoothing.....	175
3.17.4 Combination of Smoothing, Lattice Growing, and SOM Algorithm	176
4. Physiological Interpretation of SOM	177
4.1 Conditions for Abstract Feature Maps in the Brain	177
4.2 Two Different Lateral Control Mechanisms	178
4.2.1 The WTA Function, Based on Lateral Activity Control	179
4.2.2 Lateral Control of Plasticity	184
4.3 Learning Equation	185
4.4 System Models of SOM and Their Simulations	185
4.5 Recapitulation of the Features of the Physiological SOM Model	188
4.6 Similarities Between the Brain Maps and Simulated Feature Maps	188
4.6.1 Magnification	189
4.6.2 Imperfect Maps	189
4.6.3 Overlapping Maps	189
5. Variants of SOM	191
5.1 Overview of Ideas to Modify the Basic SOM	191
5.2 Adaptive Tensorial Weights	194
5.3 Tree-Structured SOM in Searching	197
5.4 Different Definitions of the Neighborhood	198
5.5 Neighborhoods in the Signal Space	200
5.6 Dynamical Elements Added to the SOM	204
5.7 The SOM for Symbol Strings	205
5.7.1 Initialization of the SOM for Strings	205
5.7.2 The Batch Map for Strings	206

5.7.3	Tie-Break Rules	206
5.7.4	A Simple Example: The SOM of Phonemic Transcriptions	207
5.8	Operator Maps	207
5.9	Evolutionary-Learning SOM	211
5.9.1	Evolutionary-Learning Filters	211
5.9.2	Self-Organization According to a Fitness Function	212
5.10	Supervised SOM	215
5.11	The Adaptive-Subspace SOM (ASSOM)	216
5.11.1	The Problem of Invariant Features	216
5.11.2	Relation Between Invariant Features and Linear Subspaces	218
5.11.3	The ASSOM Algorithm	222
5.11.4	Derivation of the ASSOM Algorithm by Stochastic Approximation	226
5.11.5	ASSOM Experiments	228
5.12	Feedback-Controlled Adaptive-Subspace SOM (FASSOM)	242
6.	Learning Vector Quantization	245
6.1	Optimal Decision	245
6.2	The LVQ1	246
6.3	The Optimized-Learning-Rate LVQ1 (OLVQ1)	250
6.4	The Batch-LVQ1	251
6.5	The Batch-LVQ1 for Symbol Strings	252
6.6	The LVQ2 (LVQ2.1)	252
6.7	The LVQ3	253
6.8	Differences Between LVQ1, LVQ2 and LVQ3	254
6.9	General Considerations	254
6.10	The Hypermap-Type LVQ	256
6.11	The "LVQ-SOM"	261
7.	Applications	263
7.1	Preprocessing of Optic Patterns	264
7.1.1	Blurring	265
7.1.2	Expansion in Terms of Global Features	266
7.1.3	Spectral Analysis	266
7.1.4	Expansion in Terms of Local Features (Wavelets)	267
7.1.5	Recapitulation of Features of Optic Patterns	267
7.2	Acoustic Preprocessing	268
7.3	Process and Machine Monitoring	269
7.3.1	Selection of Input Variables and Their Scaling	269
7.3.2	Analysis of Large Systems	270
7.4	Diagnosis of Speech Voicing	274
7.5	Transcription of Continuous Speech	274
7.6	Texture Analysis	280

7.7	Contextual Maps	281
7.7.1	Artificially Generated Clauses	283
7.7.2	Natural Text.....	285
7.8	Organization of Large Document Files	286
7.8.1	Statistical Models of Documents.....	286
7.8.2	Construction of Very Large WEBSOM Maps by the Projection Method	292
7.8.3	The WEBSOM of All Electronic Patent Abstracts	296
7.9	Robot-Arm Control.....	299
7.9.1	Simultaneous Learning of Input and Output Parameters	299
7.9.2	Another Simple Robot-Arm Control	303
7.10	Telecommunications	304
7.10.1	Adaptive Detector for Quantized Signals	304
7.10.2	Channel Equalization in the Adaptive QAM	305
7.10.3	Error-Tolerant Transmission of Images by a Pair of SOMs.....	306
7.11	The SOM as an Estimator	308
7.11.1	Symmetric (Autoassociative) Mapping	308
7.11.2	Asymmetric (Heteroassociative) Mapping.....	309
8.	Software Tools for SOM	311
8.1	Necessary Requirements	311
8.2	Desirable Auxiliary Features	313
8.3	SOM Program Packages	315
8.3.1	SOM_PAK	315
8.3.2	SOM Toolbox	317
8.3.3	Nenet (Neural Networks Tool)	318
8.3.4	Viscovery SOMine	318
8.4	Examples of the Use of SOM_PAK.....	319
8.4.1	File Formats	319
8.4.2	Description of the Programs in SOM_PAK	322
8.4.3	A Typical Training Sequence.....	326
8.5	Neural-Networks Software with the SOM Option	327
9.	Hardware for SOM	329
9.1	An Analog Classifier Circuit	329
9.2	Fast Digital Classifier Circuits	332
9.3	SIMD Implementation of SOM	337
9.4	Transputer Implementation of SOM	339
9.5	Systolic-Array Implementation of SOM	341
9.6	The COKOS Chip	342
9.7	The TInMANN Chip	342
9.8	NBISOM_25 Chip	344

10. An Overview of SOM Literature	347
10.1 Books and Review Articles	347
10.2 Early Works on Competitive Learning	348
10.3 Status of the Mathematical Analyses	349
10.3.1 Zero-Order Topology (Classical VQ) Results	349
10.3.2 Alternative Topological Mappings	350
10.3.3 Alternative Architectures	350
10.3.4 Functional Variants	351
10.3.5 Theory of the Basic SOM	352
10.4 The Learning Vector Quantization	358
10.5 Diverse Applications of SOM	358
10.5.1 Machine Vision and Image Analysis	358
10.5.2 Optical Character and Script Reading	360
10.5.3 Speech Analysis and Recognition	360
10.5.4 Acoustic and Musical Studies	361
10.5.5 Signal Processing and Radar Measurements	362
10.5.6 Telecommunications	362
10.5.7 Industrial and Other Real-World Measurements	362
10.5.8 Process Control	363
10.5.9 Robotics	364
10.5.10 Electronic-Circuit Design	364
10.5.11 Physics	364
10.5.12 Chemistry	365
10.5.13 Biomedical Applications Without Image Processing	365
10.5.14 Neurophysiological Research	366
10.5.15 Data Processing and Analysis	366
10.5.16 Linguistic and AI Problems	367
10.5.17 Mathematical and Other Theoretical Problems	368
10.6 Applications of LVQ	369
10.7 Survey of SOM and LVQ Implementations	370
