## CONTENTS, VOLUME I

<b>Preface to the Third Edition</b>	<b>vii</b>
<b>Preface to the First Edition</b>	<b>xi</b>
<b>1. Continuous Population Models for Single Species</b>	<b>1</b>
1.1 Continuous Growth Models . . . . .	1
1.2 Insect Outbreak Model: Spruce Budworm . . . . .	7
1.3 Delay Models . . . . .	13
1.4 Linear Analysis of Delay Population Models: Periodic Solutions . . . . .	17
1.5 Delay Models in Physiology: Periodic Dynamic Diseases . . . . .	21
1.6 Harvesting a Single Natural Population . . . . .	30
1.7 Population Model with Age Distribution . . . . .	36
Exercises . . . . .	40
<b>2. Discrete Population Models for a Single Species</b>	<b>44</b>
2.1 Introduction: Simple Models . . . . .	44
2.2 Cobwebbing: A Graphical Procedure of Solution . . . . .	49
2.3 Discrete Logistic-Type Model: Chaos . . . . .	53
2.4 Stability, Periodic Solutions and Bifurcations . . . . .	59
2.5 Discrete Delay Models . . . . .	62
2.6 Fishery Management Model . . . . .	67
2.7 Ecological Implications and Caveats . . . . .	69
2.8 Tumour Cell Growth . . . . .	72
Exercises . . . . .	75
<b>3. Models for Interacting Populations</b>	<b>79</b>
3.1 Predator–Prey Models: Lotka–Volterra Systems . . . . .	79
3.2 Complexity and Stability . . . . .	83
3.3 Realistic Predator–Prey Models . . . . .	86
3.4 Analysis of a Predator–Prey Model with Limit Cycle Periodic Behaviour: Parameter Domains of Stability . . . . .	88
3.5 Competition Models: Competitive Exclusion Principle . . . . .	94

3.6	Mutualism or Symbiosis . . . . .	99
3.7	General Models and Cautionary Remarks . . . . .	101
3.8	Threshold Phenomena . . . . .	105
3.9	Discrete Growth Models for Interacting Populations . . . . .	109
3.10	Predator–Prey Models: Detailed Analysis . . . . .	110
	Exercises . . . . .	115
<b>4.</b>	<b>Temperature-Dependent Sex Determination (TSD)</b>	<b>119</b>
4.1	Biological Introduction and Historical Asides on the Crocodilia . . . .	119
4.2	Nesting Assumptions and Simple Population Model . . . . .	124
4.3	Age-Structured Population Model for Crocodilia . . . . .	130
4.4	Density-Dependent Age-Structured Model Equations . . . . .	133
4.5	Stability of the Female Population in Wet Marsh Region I . . . . .	135
4.6	Sex Ratio and Survivorship . . . . .	137
4.7	Temperature-Dependent Sex Determination (TSD) Versus Genetic Sex Determination (GSD) . . . . .	139
4.8	Related Aspects on Sex Determination . . . . .	142
	Exercise . . . . .	144
<b>5.</b>	<b>Modelling the Dynamics of Marital Interaction: Divorce Prediction and Marriage Repair</b>	<b>146</b>
5.1	Psychological Background and Data: Gottman and Levenson Methodology . . . . .	147
5.2	Marital Typology and Modelling Motivation . . . . .	150
5.3	Modelling Strategy and the Model Equations . . . . .	153
5.4	Steady States and Stability . . . . .	156
5.5	Practical Results from the Model . . . . .	164
5.6	Benefits, Implications and Marriage Repair Scenarios . . . . .	170
<b>6.</b>	<b>Reaction Kinetics</b>	<b>175</b>
6.1	Enzyme Kinetics: Basic Enzyme Reaction . . . . .	175
6.2	Transient Time Estimates and Nondimensionalisation . . . . .	178
6.3	Michaelis–Menten Quasi-Steady State Analysis . . . . .	181
6.4	Suicide Substrate Kinetics . . . . .	188
6.5	Cooperative Phenomena . . . . .	197
6.6	Autocatalysis, Activation and Inhibition . . . . .	201
6.7	Multiple Steady States, Mushrooms and Isolates . . . . .	208
	Exercises . . . . .	215
<b>7.</b>	<b>Biological Oscillators and Switches</b>	<b>218</b>
7.1	Motivation, Brief History and Background . . . . .	218
7.2	Feedback Control Mechanisms . . . . .	221
7.3	Oscillators and Switches with Two or More Species: General Qualitative Results . . . . .	226
7.4	Simple Two-Species Oscillators: Parameter Domain Determination for Oscillations . . . . .	234

7.5	Hodgkin–Huxley Theory of Nerve Membranes: FitzHugh–Nagumo Model . . . . .	239
7.6	Modelling the Control of Testosterone Secretion and Chemical Castration . . . . .	244
	Exercises . . . . .	253
<b>8.</b>	<b>BZ Oscillating Reactions</b>	<b>257</b>
8.1	Belousov Reaction and the Field–Körös–Noyes (FKN) Model . . . . .	257
8.2	Linear Stability Analysis of the FKN Model and Existence of Limit Cycle Solutions . . . . .	261
8.3	Nonlocal Stability of the FKN Model . . . . .	265
8.4	Relaxation Oscillators: Approximation for the Belousov–Zhabotinskii Reaction . . . . .	268
8.5	Analysis of a Relaxation Model for Limit Cycle Oscillations in the Belousov–Zhabotinskii Reaction . . . . .	271
	Exercises . . . . .	277
<b>9.</b>	<b>Perturbed and Coupled Oscillators and Black Holes</b>	<b>278</b>
9.1	Phase Resetting in Oscillators . . . . .	278
9.2	Phase Resetting Curves . . . . .	282
9.3	Black Holes . . . . .	286
9.4	Black Holes in Real Biological Oscillators . . . . .	288
9.5	Coupled Oscillators: Motivation and Model System . . . . .	293
9.6	Phase Locking of Oscillations: Synchronisation in Fireflies . . . . .	295
9.7	Singular Perturbation Analysis: Preliminary Transformation . . . . .	299
9.8	Singular Perturbation Analysis: Transformed System . . . . .	302
9.9	Singular Perturbation Analysis: Two-Time Expansion . . . . .	305
9.10	Analysis of the Phase Shift Equation and Application to Coupled Belousov–Zhabotinskii Reactions . . . . .	310
	Exercises . . . . .	313
<b>10.</b>	<b>Dynamics of Infectious Diseases</b>	<b>315</b>
10.1	Historical Aside on Epidemics . . . . .	315
10.2	Simple Epidemic Models and Practical Applications . . . . .	319
10.3	Modelling Venereal Diseases . . . . .	327
10.4	Multi-Group Model for Gonorrhoea and Its Control . . . . .	331
10.5	AIDS: Modelling the Transmission Dynamics of the Human Immunodeficiency Virus (HIV) . . . . .	333
10.6	HIV: Modelling Combination Drug Therapy . . . . .	341
10.7	Delay Model for HIV Infection with Drug Therapy . . . . .	350
10.8	Modelling the Population Dynamics of Acquired Immunity to Parasite Infection . . . . .	351
10.9	Age-Dependent Epidemic Model and Threshold Criterion . . . . .	361
10.10	Simple Drug Use Epidemic Model and Threshold Analysis . . . . .	365
10.11	Bovine Tuberculosis Infection in Badgers and Cattle . . . . .	369

10.12	Modelling Control Strategies for Bovine Tuberculosis in Badgers and Cattle . . . . .	379
	Exercises . . . . .	393
<b>11.</b>	<b>Reaction Diffusion, Chemotaxis, and Nonlocal Mechanisms</b>	<b>395</b>
11.1	Simple Random Walk and Derivation of the Diffusion Equation . . .	395
11.2	Reaction Diffusion Equations . . . . .	399
11.3	Models for Animal Dispersal . . . . .	402
11.4	Chemotaxis . . . . .	405
11.5	Nonlocal Effects and Long Range Diffusion . . . . .	408
11.6	Cell Potential and Energy Approach to Diffusion and Long Range Effects . . . . .	413
	Exercises . . . . .	416
<b>12.</b>	<b>Oscillator-Generated Wave Phenomena</b>	<b>418</b>
12.1	Belousov–Zhabotinskii Reaction Kinematic Waves . . . . .	418
12.2	Central Pattern Generator: Experimental Facts in the Swimming of Fish . . . . .	422
12.3	Mathematical Model for the Central Pattern Generator . . . . .	424
12.4	Analysis of the Phase Coupled Model System . . . . .	431
	Exercises . . . . .	436
<b>13.</b>	<b>Biological Waves: Single-Species Models</b>	<b>437</b>
13.1	Background and the Travelling Waveform . . . . .	437
13.2	Fisher–Kolmogoroff Equation and Propagating Wave Solutions . . . .	439
13.3	Asymptotic Solution and Stability of Wavefront Solutions of the Fisher–Kolmogoroff Equation . . . . .	444
13.4	Density-Dependent Diffusion-Reaction Diffusion Models and Some Exact Solutions . . . . .	449
13.5	Waves in Models with Multi-Steady State Kinetics: Spread and Control of an Insect Population . . . . .	460
13.6	Calcium Waves on Amphibian Eggs: Activation Waves on <i>Medaka</i> Eggs . . . . .	467
13.7	Invasion Wavespeeds with Dispersive Variability . . . . .	471
13.8	Species Invasion and Range Expansion . . . . .	478
	Exercises . . . . .	482
<b>14.</b>	<b>Use and Abuse of Fractals</b>	<b>484</b>
14.1	Fractals: Basic Concepts and Biological Relevance . . . . .	484
14.2	Examples of Fractals and Their Generation . . . . .	487
14.3	Fractal Dimension: Concepts and Methods of Calculation . . . . .	490
14.4	Fractals or Space-Filling? . . . . .	496
	<b>Appendices</b>	<b>501</b>
<b>A.</b>	<b>Phase Plane Analysis</b>	<b>501</b>

<b>B. Routh-Hurwitz Conditions, Jury Conditions, Descartes' Rule of Signs, and Exact Solutions of a Cubic</b>	<b>507</b>
B.1 Polynomials and Conditions . . . . .	507
B.2 Descartes' Rule of Signs . . . . .	509
B.3 Roots of a General Cubic Polynomial . . . . .	510
<b>Bibliography</b>	<b>513</b>
<b>Index</b>	<b>537</b>

## CONTENTS, VOLUME II

### J.D. Murray: *Mathematical Biology, II: Spatial Models and Biomedical Applications*

#### Preface to the Third Edition

#### Preface to the First Edition

### 1. Multi-Species Waves and Practical Applications

- 1.1 Intuitive Expectations
- 1.2 Waves of Pursuit and Evasion in Predator–Prey Systems
- 1.3 Competition Model for the Spatial Spread of the Grey Squirrel in Britain
- 1.4 Spread of Genetically Engineered Organisms
- 1.5 Travelling Fronts in the Belousov–Zhabotinskii Reaction
- 1.6 Waves in Excitable Media
- 1.7 Travelling Wave Trains in Reaction Diffusion Systems with Oscillatory Kinetics
- 1.8 Spiral Waves
- 1.9 Spiral Wave Solutions of  $\lambda$ - $\omega$  Reaction Diffusion Systems

### 2. Spatial Pattern Formation with Reaction Diffusion Systems

- 2.1 Role of Pattern in Biology
- 2.2 Reaction Diffusion (Turing) Mechanisms
- 2.3 General Conditions for Diffusion-Driven Instability: Linear Stability Analysis and Evolution of Spatial Pattern
- 2.4 Detailed Analysis of Pattern Initiation in a Reaction Diffusion Mechanism
- 2.5 Dispersion Relation, Turing Space, Scale and Geometry Effects in Pattern Formation Models
- 2.6 Mode Selection and the Dispersion Relation
- 2.7 Pattern Generation with Single-Species Models: Spatial Heterogeneity with the Spruce Budworm Model
- 2.8 Spatial Patterns in Scalar Population Interaction Diffusion Equations with Convection: Ecological Control Strategies

- 2.9 Nonexistence of Spatial Patterns in Reaction Diffusion Systems: General and Particular Results
- 3. Animal Coat Patterns and Other Practical Applications of Reaction Diffusion Mechanisms**
- 3.1 Mammalian Coat Patterns—‘How the Leopard Got Its Spots’
- 3.2 Teratologies: Examples of Animal Coat Pattern Abnormalities
- 3.3 A Pattern Formation Mechanism for Butterfly Wing Patterns
- 3.4 Modelling Hair Patterns in a Whorl in *Acetabularia*
- 4. Pattern Formation on Growing Domains: Alligators and Snakes**
- 4.1 Stripe Pattern Formation in the Alligator: Experiments
- 4.2 Modelling Concepts: Determining the Time of Stripe Formation
- 4.3 Stripes and Shadow Stripes on the Alligator
- 4.4 Spatial Patterning of Teeth Primordia in the Alligator: Background and Relevance
- 4.5 Biology of Tooth Initiation
- 4.6 Modelling Tooth Primordium Initiation: Background
- 4.7 Model Mechanism for Alligator Teeth Patterning
- 4.8 Results and Comparison with Experimental Data
- 4.9 Prediction Experiments
- 4.10 Concluding Remarks on Alligator Tooth Spatial Patterning
- 4.11 Pigmentation Pattern Formation on Snakes
- 4.12 Cell-Chemotaxis Model Mechanism
- 4.13 Simple and Complex Snake Pattern Elements
- 4.14 Propagating Pattern Generation with the Cell-Chemotaxis System
- 5. Bacterial Patterns and Chemotaxis**
- 5.1 Background and Experimental Results
- 5.2 Model Mechanism for *E. coli* in the Semi-Solid Experiments
- 5.3 Liquid Phase Model: Intuitive Analysis of Pattern Formation
- 5.4 Interpretation of the Analytical Results and Numerical Solutions
- 5.5 Semi-Solid Phase Model Mechanism for *S. typhimurium*
- 5.6 Linear Analysis of the Basic Semi-Solid Model
- 5.7 Brief Outline and Results of the Nonlinear Analysis
- 5.8 Simulation Results, Parameter Spaces, Basic Patterns
- 5.9 Numerical Results with Initial Conditions from the Experiments
- 5.10 Swarm Ring Patterns with the Semi-Solid Phase Model Mechanism
- 5.11 Branching Patterns in *Bacillus subtilis*
- 6. Mechanical Theory for Generating Pattern and Form in Development**
- 6.1 Introduction, Motivation and Background Biology
- 6.2 Mechanical Model for Mesenchymal Morphogenesis
- 6.3 Linear Analysis, Dispersion Relation and Pattern Formation Potential

- 6.4 Simple Mechanical Models Which Generate Spatial Patterns with Complex Dispersion Relations
- 6.5 Periodic Patterns of Feather Germs
- 6.6 Cartilage Condensation in Limb Morphogenesis and Morphogenetic Rules
- 6.7 Embryonic Fingerprint Formation
- 6.8 Mechanochemical Model for the Epidermis
- 6.9 Formation of Microvilli
- 6.10 Complex Pattern Formation and Tissue Interaction Models
- 7. Evolution, Morphogenetic Laws, Developmental Constraints and Teratologies**
  - 7.1 Evolution and Morphogenesis
  - 7.2 Evolution and Morphogenetic Rules in Cartilage Formation in the Vertebrate Limb
  - 7.3 Teratologies (Monsters)
  - 7.4 Developmental Constraints, Morphogenetic Rules and the Consequences for Evolution
- 8. A Mechanical Theory of Vascular Network Formation**
  - 8.1 Biological Background and Motivation
  - 8.2 Cell–Extracellular Matrix Interactions for Vasculogenesis
  - 8.3 Parameter Values
  - 8.4 Analysis of the Model Equations
  - 8.5 Network Patterns: Numerical Simulations and Conclusions
- 9. Epidermal Wound Healing**
  - 9.1 Brief History of Wound Healing
  - 9.2 Biological Background: Epidermal Wounds
  - 9.3 Model for Epidermal Wound Healing
  - 9.4 Nondimensional Form, Linear Stability and Parameter Values
  - 9.5 Numerical Solution for the Epidermal Wound Repair Model
  - 9.6 Travelling Wave Solutions for the Epidermal Model
  - 9.7 Clinical Implications of the Epidermal Wound Model
  - 9.8 Mechanisms of Epidermal Repair in Embryos
  - 9.9 Actin Alignment in Embryonic Wounds: A Mechanical Model
  - 9.10 Mechanical Model with Stress Alignment of the Actin Filaments in Two Dimensions
- 10. Dermal Wound Healing**
  - 10.1 Background and Motivation—General and Biological
  - 10.2 Logic of Wound Healing and Initial Models
  - 10.3 Brief Review of Subsequent Developments
  - 10.4 Model for Fibroblast-Driven Wound Healing: Residual Strain and Tissue Remodelling

- 10.5 Solutions of the Model Equation Solutions and Comparison with Experiment
- 10.6 Wound Healing Model of Cook (1995)
- 10.7 Matrix Secretion and Degradation
- 10.8 Cell Movement in an Oriented Environment
- 10.9 Model System for Dermal Wound Healing with Tissue Structure
- 10.10 One-Dimensional Model for the Structure of Pathological Scars
- 10.11 Open Problems in Wound Healing
- 10.12 Concluding Remarks on Wound Healing

## 11. Growth and Control of Brain Tumours

- 11.1 Medical Background
- 11.2 Basic Mathematical Model of Glioma Growth and Invasion
- 11.3 Tumour Spread *In Vitro*: Parameter Estimation
- 11.4 Tumour Invasion in the Rat Brain
- 11.5 Tumour Invasion in the Human Brain
- 11.6 Modelling Treatment Scenarios: General Comments
- 11.7 Modelling Tumour Resection (Removal) in Homogeneous Tissue
- 11.8 Analytical Solution for Tumour Recurrence After Resection
- 11.9 Modelling Surgical Resection with Brain Tissue Heterogeneity
- 11.10 Modelling the Effect of Chemotherapy on Tumour Growth
- 11.11 Modeling Tumour Polyclonality and Cell Mutation

## 12. Neural Models of Pattern Formation

- 12.1 Spatial Patterning in Neural Firing with a Simple Activation–Inhibition Model
- 12.2 A Mechanism for Stripe Formation in the Visual Cortex
- 12.3 A Model for the Brain Mechanism Underlying Visual Hallucination Patterns
- 12.4 Neural Activity Model for Shell Patterns
- 12.5 Shamanism and Rock Art

## 13. Geographic Spread and Control of Epidemics

- 13.1 Simple Model for the Spatial Spread of an Epidemic
- 13.2 Spread of the Black Death in Europe 1347–1350
- 13.3 Brief History of Rabies: Facts and Myths
- 13.4 The Spatial Spread of Rabies Among Foxes I: Background and Simple Model
- 13.5 Spatial Spread of Rabies Among Foxes II: Three-Species (*SIR*) Model
- 13.6 Control Strategy Based on Wave Propagation into a Non-epidemic Region: Estimate of Width of a Rabies Barrier
- 13.7 Analytic Approximation for the Width of the Rabies Control Break

- 13.8 Two-Dimensional Epizootic Fronts and Effects of Variable Fox  
Densities: Quantitative Predictions for a Rabies Outbreak  
in England
- 13.9 Effect of Fox Immunity on Spatial Spread of Rabies
- 14. Wolf Territoriality, Wolf-Deer Interaction and Survival**
- 14.1 Introduction and Wolf Ecology
- 14.2 Models for Wolf Pack Territory Formation: Single Pack—Home Range  
Model
- 14.3 Multi-Wolf Pack Territorial Model
- 14.4 Wolf-Deer Predator-Prey Model
- 14.5 Concluding Remarks on Wolf Territoriality and Deer Survival
- 14.6 Coyote Home Range Patterns
- 14.7 Chippewa and Sioux Intertribal Conflict c1750-1850

## **Appendix**

### **A. General Results for the Laplacian Operator in Bounded Domains**

## **Bibliography**

## **Index**
