Preface	xi
Itinerary	1
1 Basic Fourier Analysis	3
1.1 Definition of the Fourier Transform	4
1.2 The Fundamental Operations	6
1.3 Fourier Series	12
1.4 The Poisson Summation Formula	14
1.5 Gaussians and Plancherel's Theorem	16
2 Time-Frequency Analysis and the Uncertainty Principle	21
2.1 The Musical Score as a Metaphor for Time-Frequency Analysis	21
2.2 Uncertainty Principles	26
2.3 The Uncertainty Principle of Donoho and Stark	30
2.4 Quantum Mechanics and the Uncertainty Principle	33
3 The Short-Time Fourier Transform	37
3.1 Elementary Properties of the Short-Time Fourier Transform	37
3.2 Orthogonality Relations and Inversion Formula	42
3.3 Lieb's Uncertainty Principle	49
3.4 The Bargmann Transform	53
4 Quadratic Time-Frequency Representations	59
4.1 The Spectrogram	60
4.2 The Ambiguity Function	61
4.3 The Wigner Distribution	63
4.4 Positivity of the Wigner Distribution	69
4.5 Cohen's Class	79

5	Discrete Time-Frequency Representations: Gabor Frames	83
5.1	Frame Theory	85
5.2	Gabor Frames	93
5.3	Unconditional Convergence	96
6	Existence of Gabor Frames	103
6.1	The Wiener Space	103
6.2	Boundedness of the Gabor Frame Operator	105
6.3	Walnut's Representation of the Gabor Frame Operator	111
6.4	Painless Non-Orthogonal Expansions	118
6.5	Existence of Gabor Frames	120
7	The Structure of Gabor Systems	127
7.1	Walnut's Representation Revisited	127
7.2	Janssen's Representation	130
7.3	The Wexler-Raz Biorthogonality Relations	133
7.4	The Ron-Shen Duality Principle	135
7.5	Density of Gabor Frames	138
7.6	The Variety of Dual Windows	142
8	Zak Transform Methods	147
8.1	The Zak Transform	147
8.2	Properties of the Zak Transform	148
8.3	Gabor Frames and the Zak Transform	156
8.4	The Balian-Low Theorem	162
8.5	Wilson Bases	167
9	The Heisenberg Group: A Different Point of View	175
9.1	The Heisenberg Group	175
9.2	Representation Theory	181
9.3	The Stone-von Neumann Theorem	189
9.4	The Metaplectic Representation and Gabor Frames on General Time-Frequency Lattices	195
10	Wavelet Transforms	203
11	Modulation Spaces	215
11.1	Weights and Mixed-Norm Spaces	216
11.2	Time-Frequency Analysis of Distributions	225
11.3	Theory of Function Spaces	230
11.4	Generalizations and Variations	239

12 Gabor Analysis of Modulation Spaces	245
12.1 Window Classes for Gabor Analysis	245
12.2 Boundedness of Gabor Frame Operators on Modulation Spaces	256
12.3 Wilson Bases in Modulation Spaces	264
12.4 Data Compression	272
13 Window Design and Wiener's Lemma	277
13.1 Non-Uniform Gabor Frames	277
13.2 The Rational Case	279
13.3 Proof of the Main Theorem	281
13.4 Operator Algebras	288
13.5 The Irrational Case	293
13.6 Banach Frames	297
14 Pseudodifferential Operators	301
14.1 Partial Differential Equations	302
14.2 Time-Varying Systems	305
14.3 Quantization and the Weyl Calculus	307
14.4 Kernel Theorems	314
14.5 Boundedness of Pseudodifferential Operators	317
14.6 Miscellaneous	324
Appendix	329
References	335
Index	355
