Preliminaries

1 General Introduction 3
1.1 Generalities on Optimization 3
1.1.1 The Problem 3
1.1.2 Classification 4
1.2 Motivation and Examples 5
1.2.1 Molecular Biology 5
1.2.2 Meteorology 6
1.2.3 Trajectory of a Deepwater Vehicle 8
1.2.4 Optimization of Power Management 9
1.3 General Principles of Resolution 10
1.4 General Convergence Theorem: Zangwill 12
1.5 Generalities on Convergence 13
1.6 Computing the Gradient 16

Part I Unconstrained Problems

2 Basic Methods 25
2.1 Existence Questions 25
2.2 Optimality Conditions 26
2.3 First-Order Methods 27
2.3.1 Gauss-Seidel 27
2.3.2 Method of Successive Approximations, or Gradient Method 28
2.4 Link with the General Descent Scheme 28
2.4.1 Choosing the ℓ_1-Norm 29
2.4.2 Choosing the ℓ_2-Norm 30
2.5 Steepest-Descent Method 30
2.6 Implementation 34

3 Line-Searches 37
3.1 General Scheme 37
3.2 Computing the New t 40

3.3 Optimal Stepsize (for the record only) 42
3.4 Modern Line-Search: Wolfe's Rule 43
3.5 Other Line-Searches: Goldstein and Price, Armijo 47
3.5.1 Goldstein and Price 47
3.5.2 Armijo 47
3.5.3 Remark on the Choice of Constants 48
3.6 Implementation Considerations 49

4 Newtonian Methods 51
4.1 Preliminaries 51
4.2 Forcing Global Convergence 52
4.3 Alleviating the Method 53
4.4 Quasi-Newton Methods 54
4.5 Global Convergence 57
4.6 Local Convergence: Generalities 59
4.7 Local Convergence: BFGS 61

5 Conjugate Gradient 67
5.1 Outline of Conjugate Gradient 67
5.2 Developing the Method 69
5.3 Computing the Direction 70
5.4 The Algorithm Seen as an Orthogonalization Process 70
5.5 Application to Non-Quadratic Functions 72
5.6 Relation with Quasi-Newton 74

6 Special Methods 77
6.1 Trust-Regions 77
6.1.1 The Elementary Problem 78
6.1.2 The Elementary Mechanism: Curvilinear Search 79
6.1.3 Incidence on the Sequence x_k 81
6.2 Least-Squares Problems: Gauss-Newton 82
6.3 Large-Scale Problems: Limited-Memory Quasi-Newton 84
6.4 Truncated Newton 86

Part II Nonsmooth Optimization

7 Some Theory of Nonsmooth Optimization 95
7.1 First Elements of Convex Analysis 95
7.2 Lagrangian Relaxation and Duality 97
7.3 Two Convex Nondifferentiable Functions 98
7.3.1 Finite Minimax Problems 99
7.3.2 Dual Functions in Lagrangian Duality 99

8 Some Methods in Nonsmooth Optimization 101
8.1 Why Special Methods? 101
8.2 Descent Methods 102
8.2.1 Steepest-Descent Method 103
8.2.2 Stabilization. A Dual Approach. The ε-subdifferential . 106
8.3 Two Black-Box Methods 108
8.3.1 Subgradient Methods 108
8.3.2 Cutting-Planes Method 111

9 Bundle Methods. The Quest of Descent 117
9.1 Stabilization. A Primal Approach 117
9.2 Some Examples of Stabilized Problems 120
9.3 Penalized Bundle Methods 121
9.3.1 A Trip to the Dual Space 122
9.3.2 Managing the Bundle. Aggregation 126
9.3.3 Updating the Penalization Parameter. Reversal Forms 129
9.3.4 Relation with Proximal Methods for Generalized Equations 131
9.3.5 Convergence Analysis 133

10 Decomposition and Duality 137
10.1 Primal-Dual Relations 138
10.2 Back to the Primal. Recovering Primal Solutions 139
10.3 Price Decomposition 142
10.3.1 General Algorithm 142
10.3.2 Relation with Dantzig-Wolfe Decomposition 144
10.4 Resource Decomposition 145
10.5 Other Decomposition Techniques 147

Part III Newton's Methods in Constrained Optimization

11 Background 157
11.1 Differential Calculus 157
11.2 Existence and Uniqueness of Solutions 159
11.3 First-Order Optimality Conditions 160
11.4 Second-Order Optimality Conditions 162
11.5 Speed of Convergence 163
11.6 Projection onto a Closed Convex Set 164
11.7 The Newton Method 165
Exercises 167

12 Local Methods for Problems with Equality Constraints ... 169
12.1 Newton's Method ... 170
12.2 Adapted Decompositions of $\mathbb{R}^n$ ... 176
12.3 Local Analysis of Newton's Method ... 181
12.4 Computation of the Newton Step ... 184
12.5 Reduced Hessian Algorithm ... 190
12.6 A Comparison of the Algorithms ... 197
Notes ... 199
Exercises ... 200

13 Local Methods for Problems with Equality and Inequality Constraints ... 203
13.1 The SQP Algorithm ... 204
13.2 Primal-Dual Quadratic Convergence ... 207
13.3 Primal Superlinear Convergence ... 212
Notes ... 214

14 Exact Penalization ... 217
14.1 Overview ... 217
14.2 The Lagrangian ... 220
14.3 The Augmented Lagrangian ... 221
14.4 Nondifferentiable Augmented Function ... 224
Notes ... 230
Exercises ... 230

15 Globalization by Line-Search ... 235
15.1 Line-Search SQP Algorithms ... 237
15.2 Truncated SQP ... 244
15.3 From Global to Local ... 253
Notes ... 262
Exercises ... 263

16 Quasi-Newton Versions ... 265
16.1 Principles ... 265
16.2 Quasi-Newton SQP ... 269
16.3 Reduced Quasi-Newton Algorithm ... 273

Part IV Interior-Point Algorithms for Linear and Quadratic Optimization

17 Linearly Constrained Optimization and Simplex Algorithm 291
17.1 Existence of Solutions ... 291
17.1.1 Existence Result ... 291
17.1.2 Basic Points and Extensions ... 293

17.2 Duality 294
17.2.1 Introducing the Dual Problem 294
17.2.2 Concept of Saddle-Point 296
17.2.3 Other Formulations 300
17.2.4 Strict Complementarity 301
17.3 The Simplex Algorithm 302
17.3.1 Computing the Descent Direction 302
17.3.2 Stating the algorithm 303
17.4 Comments 305

18 Linear Monotone Complementarity and Associated Vector Fields 307
18.1 Logarithmic Penalty and Central Path 307
18.1.1 Logarithmic Penalty 307
18.1.2 Central Path 308
18.2 Linear Monotone Complementarity 309
18.2.1 General Framework 309
18.2.2 A Group of Transformations 313
18.2.3 Standard Form 314
18.2.4 Partition of Variables and Canonical Form 315
18.2.5 Magnitudes in a Neighborhood of the Central Path ... 315
18.3 Vector Fields Associated with the Central Path 317
18.3.1 General Framework 318
18.3.2 Scaling the Problem 318
18.3.3 Analysis of the Directions 319
18.3.4 Modified Field 322
18.4 Continuous Trajectories 324
18.4.1 Limit Points of Continuous Trajectories 324
18.4.2 Developing Affine Trajectories and Directions 326
18.4.3 Mizuno's Lemma 327
18.5 Comments 328

19 Predictor-Corrector Algorithms 329
19.1 Overview 329
19.2 Statement of the Methods 330
19.2.1 General Framework for Primal-Dual Algorithms 330
19.2.2 Weighting After Displacement 331
19.2.3 The Predictor-Corrector Method 331
19.3 A small-Neighborhood Algorithm 332
19.3.1 Statement of the Algorithm. Main Result 332
19.3.2 Analysis of the Centralization Move 333
19.3.3 Analysis of the Affine Step and Global Convergence .. 334
19.3.4 Asymptotic Speed of Convergence 335
19.4 A Predictor-Corrector Algorithm with Modified Field 336
19.4.1 Principle 336

19.4.2 Statement of the Algorithm. Main Result 338
19.4.3 Complexity Analysis 339
19.4.4 Asymptotic Analysis 340
19.5 A Large-Neighborhood Algorithm 340
19.5.1 Statement of the Algorithm. Main Result 340
19.5.2 Analysis of the Centering Step 341
19.5.3 Analysis of the Affine Step 342
19.5.4 Asymptotic Convergence 343
19.6 Practical Aspects 343
19.7 Comments 344

20 Non-Feasible Algorithms 345
20.1 Overview 345
20.2 Principle of the Non-Feasible Path Following 345
20.2.1 Non-Feasible Central Path 345
20.2.2 Directions of Move 346
20.2.3 Orders of Magnitude of Approximately Centered Points 347
20.2.4 Analysis of Directions 349
20.2.5 Modified Field 352
20.3 Non-Feasible Predictor-Corrector Algorithm 353
20.3.1 Complexity Analysis 354
20.3.2 Asymptotic Analysis 356
20.4 Comments 356

21 Self-Duality 357
21.1 Overview 357
21.2 Linear Problems with Inequality Constraints 357
21.2.1 A Family of Self-Dual Linear Problems 357
21.2.2 Embedding in a Self-Dual Problem 359
21.3 Linear Problems in Standard Form 361
21.3.1 The Associated Self-Dual Homogeneous System 361
21.3.2 Embedding in a Feasible Self-Dual Problem 362
21.4 Practical Aspects 363
21.5 Extension to Linear Monotone Complementarity Problems ... 365
21.6 Comments 366

22 One-Step Methods 367
22.1 Overview 367
22.2 The Largest-Step Sethod 368
22.2.1 Largest-Step Algorithm 368
22.2.2 Largest-Step Algorithm with Safeguard 368
22.3 Centralization in the Space of Large Variables 369
22.3.1 One-Sided Distance 369
22.3.2 Convergence with Strict Complementarity 373
22.3.3 Convergence without Strict Complementarity 375

22.3.4 Relative Distance in the Space of Large Variables 376
22.4 Convergence Analysis 377
22.4.1 Global Convergence of the Largest-Step Algorithm ... 377
22.4.2 Local Convergence of the Largest-Step Algorithm 378
22.4.3 Convergence of the Largest-Step Algorithm with Safeguard 379
22.5 Comments 382

23 Complexity of Linear Optimization Problems with Integer Data 383
23.1 Overview 383
23.2 Main Results 384
23.2.1 General Hypotheses 384
23.2.2 Statement of the Results 384
23.2.3 Application 385
23.3 Solving a System of Linear Equations 385
23.4 Proofs of the Main Results 387
23.4.1 Proof of Theorem 23.1 387
23.4.2 Proof of Theorem 23.2 387
23.5 Comments 388

24 Karmarkar's Algorithm 389
24.1 Overview 389
24.2 Linear Problem in Projective Form 389
24.2.1 Projective Form and Karmarkar Potential 389
24.2.2 Minimizing the Potential and Solving (PLP) 390
24.3 Statement of Karmarkar's Algorithm 391
24.4 Analysis of the Algorithm 392
24.4.1 Complexity Analysis 392
24.4.2 Analysis of the Potential Decrease 392
24.4.3 Estimating the Optimal Cost 393
24.4.4 Practical Aspects 394
24.5 Comments 395
