

Physics in nuclear medicine / Simon R. Cherry; James Sorenson; Michael Phelps. 3e.

ISBN 13: 9780721683416

CHAPTER 1: What is nuclear medicine

- a. Fundamental Concepts
- b. The Power of Nuclear Medicine
- c. Historical Overview
- d. Current Practice of Nuclear Medicine
- e. The Role of Physics in Nuclear Medicine

CHAPTER 2: Basic atomic and nuclear physics

- a. Quantities and Units
- b. Radiation
- c. Atoms
- d. Nucleur

CHAPTER 3: Modes of radioactive decay

- a. General Concepts
- b. Chemistry and Radioactivity
- c. Decay by Emission
- d. Isomeric Transition and Internal Conversion
- e. Electron Capture and Decay
- f. Positron and Decay
- g. Competitive and EC Decay
- h. Decay by Emission and Nuclear Fission
- i. Decay Modes and the Line of Stability
- j. Sources of Information on radionuclides

CHAPTER 4: Decay of radioactivity

- a. Activity
- b. Exponential Decay
- c. Methods for Determining Decay Factors
- d. Image-Frame Decay Corrections
- e. Specific Activity

- f. Decay of a Mixed Radionuclide Sample
- g. Parent-Daughter Decay

CHAPTER 5: Isotope Production and Tracer Synthesis

- a. Reactor-Produced Radionuclides
- b. Accelerator-produced radionuclides
- c. Radionuclide generators
- d. Equations for radionuclide production
- e. Radionuclides for nuclear medicine
- f. Radiopharmaceuticals for Clinical Applications

CHAPTER 6: Interaction of Radiation with Matter

- a. Interactions of Charged Particles with Matter
- b. Charged-Particle Ranges
- c. Passage of High-Energy Photons Through Matter
- d. Attenuation of Photon Beams

CHAPTER 7: Radiation Detectors

- a. Gas-filled Detectors
- b. Semi-conductor Detectors
- c. Scintillation Detectors

CHAPTER 8: Electronic Instrumentation for Radiation Detection

- a. Preamplifiers
- b. Amplifiers
- c. Pulse-Height Analyzers
- d. Time-to-Amplitude Converters
- e. Digital Counters and Ratemeters
- f. Coincidence Units g. High-Voltage Power Supplies
- h. Nuclear Instrument Modules
- i. Cathode Ray Tube
- j. Oscilloscopes
- k. Computer Monitors

CHAPTER 9: Nuclear Counting Statistics

- a. Types of Measurement Error
- b. Nuclear Counting Statistics
- c. Propagation of Errors
- d. Applications of Statistical Analysis
- e. Statistical Tests

CHAPTER 10: Pulse Height Spectrometry

- a. Basic Principles
- b. Spectrometry with NaI
- c. Spectrometry with other Detectors

CHAPTER 11: Problems in Radiation Detection and Measurement

- a. Detection Efficiency
- b. Problems in the Detection and Measurement of Particles
- c. Deadtime
- d. Quality Assurance for Radiation Measurement Systems

CHAPTER 12: Counting Systems

- a. NaI Well Counter
- b. Counting with Conventional NaI Detectors
- c. Liquid Scintillation Counters
- d. Gas-filled Detectors
- e. Semiconductor Detector Systems
- f. In Vivo Counting Systems

CHAPTER 13: The Gamma Camera: Basic Principles

- a. General Concepts of Radionuclide Imaging
- b. Basic Principles of the Anger Camera

CHAPTER 14: Gamma Camera Performance Characteristics

- a. Basic Performance Characteristics
- b. Detector Limitations: Nonuniformity and Nonlinearity
- c. Design and Performance Characteristics of Parallel-Hole Collimators

- d. Performance Characteristics of Converging, Diverging and Pinhole Collimators
- e. Measurements of Camera Performance

CHAPTER 15: Image Quality in Nuclear Medicine

- a. Basic Methods for Characterizing and Evaluating Image Quality
- b. Spatial Resolution
- c. Contrast
- d. Noise
- e. Detectability and Observer Performance Studies

CHAPTER 16: Tomographic Reconstruction in Nuclear Medicine

- a. General Concepts, Notation and Terminology
- b. Backprojection and Fourier-Based Techniques
- c. Image Quality in FT and FBP Techniques
- d. Iterative Reconstruction Algorithms
- e. Reconstruction of Fan-Beam and Cone-Beam Data

CHAPTER 17: Single Photon Em
