PREFACE xiii

ACKNOWLEDGMENTS xvii

CHAPTER 1 Introduction 1

- 1.1 Preliminary Considerations 1
- 1.2 Historical Background 2
- 1.3 Systems Analysis: Fundamental Concepts 3
- 1.4 Physiological Control Systems Analysis: A Simple Example 5
- 1.5 Differences between Engineering and Physiological Control Systems 7
- 1.6 The Science (and Art) of Modeling 9
- Bibliography 11
- Problems 11

CHAPTER 2 Mathematical Modeling 13

- 2.1 Generalized System Properties 13
- 2.2 Models with Combinations of System Elements 16
- 2.3 Linear Models of Physiological Systems: Two Examples 19
- 2.4 Distributed-Parameter versus Lumped-Parameter Models 21
- 2.5 Linear Systems and the Superposition Principle 23
- 2.6 Laplace Transforms and Transfer Functions 24
- 2.7 The Impulse Response and Linear Convolution 26

	2.8 State-Space Analysis	28
	2.9 Computer Analysis and Simulation—MATLAB and SIMULINK	30
	Bibliography	35
	Problems	35
CHAPTER 3	Static Analysis of Physiological Systems	39
	3.1 Introduction	39
	3.2 Open-Loop versus Closed-Loop Systems	40
	3.3 Determination of the Steady-State Operating Point	42
	3.4 Steady-State Analysis Using SIMULINK	45
	3.5 Regulation of Cardiac Output	48
	3.5.1 The Cardiac Output Curve	49
	3.5.2 The Venous Return Curve	51
	3.5.3 Closed-Loop Analysis: Heart and Systemic Circulation Combined	54
	3.6 Regulation of Glucose	55
	3.7 Chemical Regulation of Ventilation	59
	3.7.1 The Gas Exchanger	59
	3.7.2 The Respiratory Controller	61
	3.7.3 Closed-Loop Analysis: Lungs and Controller Combined	62
	Bibliography	65
	Problems	66
CHAPTER 4	Time-Domain Analysis of Linear Control Systems	69
	4.1 Linearized Respiratory Mechanics: Open-Loop versus Closed-Loop	69
	4.2 Open-Loop and Closed-Loop Transient Responses: First-Order Model	71
	4.2.1 Impulse Response	71
	4.2.2 Step Response	73
	4.3 Open-Loop versus Closed-Loop Transient Responses: Second-Order Model	73
	4.3.1 Impulse Responses	73
	4.3.2 Step Responses	78
	4.4 Descriptors of Impulse and Step Responses	81
	4.4.1 Generalized Second-Order Dynamics	81
	4.4.2 Transient Response Descriptors	84
	4.5 Open-Loop versus Closed-Loop Dynamics: Other Considerations	86
	4.5.1 Reduction of the Effects of External Disturbances	86
	4.5.2 Reduction of the Effects of Parameter Variations	87
	4.5.3 Integral Control	88
	4.5.4 Derivative Feedback	90
	4.6 Transient Response Analysis Using MATLAB	91

4.7	SIMULINK Application: Dynamics of Neuromuscular Reflex Motion	91
4.7.1	A Model of Neuromuscular Reflex Motion	92
4.7.2	SIMULINK Implementation	94
	Bibliography	96
	Problems	97
CHAPTER 5	Frequency-Domain Analysis of Linear Control Systems	101
5.1	Steady-State Responses to Sinusoidal Inputs	101
5.1.1	Open-Loop Frequency Response	101
5.1.2	Closed-Loop Frequency Response	105
5.1.3	Relationship between Transient and Frequency Responses	105
5.2	Graphical Representations of Frequency Response	108
5.2.1	Bode Plot Representation	108
5.2.2	Nichols Charts	111
5.2.3	Nyquist Plots	113
5.3	Frequency-Domain Analysis Using MATLAB and SIMULINK	114
5.3.1	Using MATLAB	114
5.3.2	Using SIMULINK	116
5.4	Frequency Response of a Model of Circulatory Control	119
5.4.1	The Model	119
5.4.2	Simulations with the Model	121
5.4.3	Frequency Response of the Model	121
5.5	Frequency Response of Glucose–Insulin Regulation	124
5.5.1	The Model	124
5.5.2	Simulations with the Model	125
5.5.3	Frequency Responses of the Model	125
	Bibliography	128
	Problems	129
CHAPTER 6	Stability Analysis: Linear Approaches	131
6.1	Stability and Transient Response	131
6.2	Root Locus Plots	134
6.3	Routh–Hurwitz Stability Criterion	137
6.4	Nyquist Criterion for Stability	139
6.5	Relative Stability	143
6.6	Stability Analysis of the Pupillary Light Reflex	146
6.6.1	Routh–Hurwitz Analysis	147
6.6.2	Nyquist Analysis	149
6.7	Model of Cheyne–Stokes Breathing	151
6.7.1	CO ₂ Exchange in the Lungs	151
6.7.2	Transport Delays	153

- 6.7.3 Controller Responses 153
- 6.7.4 Loop Transfer Functions 154
- 6.7.5 Nyquist Stability Analysis Using MATLAB 154

Bibliography 156

Problems 156

CHAPTER 7 Identification of Physiological Control Systems 159

7.1 Basic Problems in Physiological System Analysis 159

7.2 Nonparametric and Parametric Identification

Methods 161

7.2.1 Numerical Deconvolution 162

7.2.2 Least Squares Estimation 163

7.2.3 Estimation Using Correlation Functions 166

7.2.4 Estimation in the Frequency Domain 167

7.2.5 Optimization Techniques 169

7.3 Problems in Parameter Estimation: Identifiability and Input Design 175

7.3.1 Structural Identifiability 175

7.3.2 Sensitivity Analysis 176

7.3.3 Input Design 179

7.4 Identification of Closed-Loop Systems: "Opening the Loop" 182

7.4.1 The Starling Heart-Lung Preparation 183

7.4.2 Kao's Cross-Circulation Experiments 184

7.4.3 Artificial Brain Perfusion for Partitioning Central and Peripheral Chemoreflexes 185

7.4.4 The Voltage Clamp 186

7.4.5 Opening the Pupillary Reflex Loop 186

7.4.6 Read Rebreathing Technique 187

7.5 Identification Under Closed-Loop Conditions: Case Studies 189

7.5.1 Minimal Model of Blood Glucose Regulation 190

7.5.2 Closed-Loop Identification of the Respiratory Control System 193

Bibliography 200

Problems 201

CHAPTER 8 Optimization in Physiological Control 203

8.1 Optimization in Systems with Negative Feedback 203

8.2 Single-Parameter Optimization: Control of Respiratory Frequency 206

8.3 Constrained Optimization: Airflow Pattern Regulation 208

8.3.1 Lagrange Multiplier Method 208

8.3.2 Optimal Control of Airflow Pattern 209

8.4 Constrained Optimization: Control of Aortic Flow Pulse 212

8.4.1	Calculus of Variations	212
8.4.2	Optimal Left Ventricular Ejection Pattern	213
8.5	Adaptive Control of Physiological Variables	218
8.5.1	General Considerations	218
8.5.2	Adaptive Buffering of Fluctuations in Arterial P_{CO_2}	219
	Bibliography	226
	Problems	227

CHAPTER 9 Nonlinear Analysis of Physiological Control Systems 229

9.1	Nonlinear versus Linear Closed-Loop Systems	229
9.2	Phase-Plane Analysis	232
9.2.1	Local Stability: Singular Points	234
9.2.2	Method of Isoclines	236
9.3	Nonlinear Oscillators	240
9.3.1	Limit Cycles	240
9.3.2	The van der Pol Oscillator	240
9.3.3	Modeling Cardiac Dysrhythmias	245
9.4	The Describing Function Method	252
9.4.1	Methodology	252
9.4.2	Application: Periodic Breathing with Apnea	254
9.5	Models of Neuronal Dynamics	257
9.5.1	The Hodgkin-Huxley Model	257
9.5.2	The Bonhoeffer-van der Pol Model	260
	Bibliography	267
	Problems	267

CHAPTER 10 Complex Dynamics in Physiological Control Systems 271

10.1	Spontaneous Variability	271
10.2	Nonlinear Control Systems with Delayed Feedback	274
10.2.1	The Logistic Equation	274
10.2.2	Regulation of Neutrophil Density	278
10.2.3	Model of Cardiovascular Variability	281
10.3	Coupled Nonlinear Oscillators: Model of Circadian Rhythms	290
10.4	Time-Varying Physiological Closed-Loop Systems: Sleep Apnea Model	295
10.5	Propagation of System Noise in Feedback Loops	301
	Bibliography	306
	Problems	307

APPENDIX I	Commonly Used Laplace Transform Pairs	309
APPENDIX II	List of MATLAB and SIMULINK Programs/ Functions	311
INDEX	315	
ABOUT THE AUTHOR	319
