

Biomaterials the intersection of biology and materials science

Temenoff, J. S

ISBN: 9780132350440

Table of Contents

Chapter 1: Materials for Biomedical Applications 1-1

1.1. Introduction to biomaterials 1-2

1.1.1. Important definitions 1-2

1.1.2. History and current status of the field 1-4

1.1.3 Future directions 1-7

1.2. Biological response to biomaterials 1-8

1.3. Biomaterial product testing and FDA approval 1-10

1.4. Types of biomaterials 1-11

1.4.1. Metals 1-11

1.4.2. Ceramics 1-11

1.4.3. Polymers 1-12

1.4.4. Naturally-derived vs. synthetic polymers 1-13

1.5. Processing of biomaterials 1-15

1.6. Important properties of biomaterials 1-16

1.6.1. Degradative properties of biomaterials 1-16

1.6.2. Surface properties of biomaterials 1-17

1.6.3. Bulk properties of biomaterials 1-19

1.6.4. Characterization techniques 1-20

1.7. Principles of chemistry 1-21

1.7.1. Atomic structure 1-22

1.7.2. Atomic models 1-22

1.7.2.1. Bohr model 1-23

1.7.2.2. Wave-mechanical model 1-23

1.7.3. Atomic orbitals 1-24

1.7.3.1. Shapes of orbitals 1-24

1.7.3.2. Order of subshells and the Aufbau principle 1-24

1.7.4. Valence electrons and the periodic table 1-26

1.7.5. Ionic bonding 1-27

1.7.5.1. Bonding and force-distance curves 1-27

1.7.5.2. Characteristics of the ionic bond 1-28

1.7.6. Covalent bonding 1-29

1.7.6.1. Atomic orbitals and hybridization 1-30

1.7.6.2. Molecular orbitals 1-32

1.7.6.3. Mixed bonds 1-33

1.7.7. Metallic bonding 1-34

1.7.8. Secondary forces 1-34

1.8. Summary 1-35

- 1.9. Problems 1-37
- 1.10. Tables 1-39
- 1.11. Figures 1-44
- 1.12. References 1-70
- 1.13. Additional reading 1-72

Chapter 2: Chemical Structure of Biomaterials 2-1

- 2.1. Introduction: Bonding and the structure of biomaterials 2-2
- 2.2. Structure of Metals 2-2
 - 2.2.1. Crystal Structures 2-2
 - 2.2.1.1. Face-centered cubic structure 2-3
 - 2.2.1.2. Body-centered cubic structure 2-5
 - 2.2.2. Crystal systems 2-6
 - 2.2.3. Defects in crystal structures 2-10
 - 2.2.3.1. Point defects 2-10
 - 2.2.3.2. Impurities 2-11
 - 2.2.4. Solid state diffusion 2-14
 - 2.2.4.1. Diffusion mechanisms 2-14
 - 2.2.4.2. Modeling of diffusion 2-15
- 2.3. Structure of Ceramics 2-18
 - 2.3.1. Crystal structures 2-19
 - 2.3.1.1. AX crystal structures 2-20
 - 2.3.1.2. AmXp crystal structures 2-20
 - 2.3.1.3. Carbon-based materials 2-21
 - 2.3.2. Defects in crystal structures 2-22
 - 2.3.2.1. Point defects 2-22
 - 2.3.2.2. Impurities 2-24
- 2.4. Structure of polymers 2-24
 - 2.4.1. General structure 2-25
 - 2.4.1.1. Repeat units 2-25
 - 2.4.1.2. Molecular weight determination 2-26
 - 2.4.1.3. Mer configuration 2-30
 - 2.4.1.4. Polymer structure 2-32
 - 2.4.2. Polymer synthesis 2-34
 - 2.4.2.1. Addition polymerization 2-34
 - 2.4.2.2. Condensation polymerization 2-36
 - 2.4.2.3. Polymer production via genetic engineering 2-36
 - 2.4.3. Copolymers 2-37
 - 2.4.4. Methods of polymerization 2-39
 - 2.4.5. Crystal structures and defects 2-41
 - 2.4.5.1. Crystal structures 2-41

2.4.5.2. Point defects and impurities	2-41
2.5. Techniques: Introduction to material characterization	2-41
2.5.1. X-ray diffraction	2-43
2.5.1.1. Basic principles	2-43
2.5.1.2. Instrumentation	2-45
2.5.1.3. Information provided	2-46
2.5.2. Ultra-violet and visible light spectroscopy (UV-VIS)	2-46
2.5.2.1. Basic principles	2-46
2.5.2.2. Instrumentation	2-47
2.5.2.3. Information provided	2-48
2.5.3. Infra-red spectroscopy (IR)	2-50
2.5.3.1. Basic principles	2-50
2.5.3.2. Instrumentation	2-50
2.5.3.3. Information provided	2-51
2.5.4. Nuclear magnetic resonance spectroscopy (NMR)	2-52
2.5.4.1. Basic principles	2-52
2.5.4.2. Instrumentation	2-54
2.5.4.3. Information provided	2-55
2.5.5. Mass spectrometry	2-55
2.5.5.1. Basic principles	2-55
2.5.5.2. Instrumentation	2-56
2.5.5.3. Information provided	2-57
2.5.6. High-performance liquid chromatography (HPLC): size-exclusion chromatography	2-57
2.5.6.1. Basic principles	2-58
2.5.6.2. Instrumentation	2-58
2.5.6.3. Information provided	2-60
2.6. Summary	2-62
2.7. Problems	2-64
2.8. Tables	2-69
2.9. Figures	2-79
2.10. References	2-148
2.11. Additional reading	2-149

Chapter 3: Physical Properties of Biomaterials 3-1

3.1. Introduction: From atomic groupings to bulk materials	3-2
3.2. Crystallinity and linear defects	3-2
3.2.1. Dislocations	3-3
3.2.1.1. Edge dislocations	3-3
3.2.1.2. Screw and mixed dislocations	3-4
3.2.1.3. Characteristics of dislocations	3-4

- 3.2.2. Deformation 3-6
- 3.3. Crystallinity and planar defects 3-8
 - 3.3.1. External surface 3-8
 - 3.3.2. Grain boundaries 3-9
- 3.4. Crystallinity and volume defects 3-12
- 3.5. Crystallinity and polymeric materials 3-13
 - 3.5.1. Percent crystallinity 3-14
 - 3.5.2. Chain folded model of crystallinity 3-16
 - 3.5.3. Defects in polymer crystals 3-17
 - 3.5.3.1. Linear defects 3-17
 - 3.5.3.2. Planar and volume defects 3-18
- 3.6. Thermal transitions of crystalline and non-crystalline materials 3-18
 - 3.6.1. Viscous flow 3-18
 - 3.6.2. Thermal transitions 3-19
 - 3.6.2.1. Metals and crystalline ceramics 3-19
 - 3.6.2.2. Amorphous ceramics (glasses) 3-19
 - 3.6.2.3. Polymers 3-20
- 3.7. Techniques: Introduction to Thermal Analysis 3-26
 - 3.7.1. Differential Scanning Calorimetry 3-27
 - 3.7.1.1. Basic principles 3-27
 - 3.7.1.2. Instrumentation 3-27
 - 3.7.1.3. Information provided 3-28
- 3.8. Summary 3-30
- 3.9. Problems 3-32
- 3.10. Tables 3-35
- 3.11. Figures 3-38
- 3.12. References 3-63
- 3.13. Additional reading 3-64

Chapter 4: Mechanical Properties of Biomaterials 4-1

- 4.1. Introduction: Modes of mechanical testing 4-3
- 4.2. Mechanical testing methods, results and calculations 4-3
 - 4.2.1. Tensile and shear properties 4-4
 - 4.2.1.1. Calculations for tensile and shear tests 4-4
 - 4.2.1.2. Stress-strain curves and elastic deformation 4-5
 - 4.2.1.3. Molecular causes of elastic deformation 4-8
 - 4.2.1.4. Stress-strain curves and plastic deformation 4-8
 - 4.2.1.5. Molecular causes of plastic deformation 4-16
 - 4.2.1.5.1. Metals and crystalline ceramics 4-17
 - 4.2.1.5.2. Amorphous polymers and ceramics (glasses) 4-18
 - 4.2.2. Bending properties 4-24

- 4.2.3. Time-dependent properties 4-27
 - 4.2.3.1. Creep 4-27
 - 4.2.3.2. Molecular causes of creep 4-29
 - 4.2.3.2.1. Metals 4-29
 - 4.2.3.2.2. Ceramics 4-30
 - 4.2.3.2.3. Polymers 4-30
 - 4.2.3.3. Stress relaxation and its causes 4-31
 - 4.2.3.4. Mathematical models of viscoelastic behavior 4-31
 - 4.2.3.4.1. Maxwell model 4-33
 - 4.2.3.4.2. Voigt model 4-34
- 4.2.4. Influence of porosity and degradation on mechanical properties 4-39
- 4.3. Fracture and failure 4-40
 - 4.3.1. Ductile and brittle fracture 4-40
 - 4.3.2. Polymer crazing 4-41
 - 4.3.3. Stress concentrators 4-42
- 4.4. Fatigue and fatigue testing 4-43
 - 4.4.1. Fatigue 4-43
 - 4.4.2. Fatigue testing 4-44
 - 4.4.3. Factors that affect fatigue life 4-45
- 4.5. Methods to improve mechanical properties 4-46
- 4.6. Techniques: Introduction to Mechanical Analysis 4-49
 - 4.6.1. Mechanical Testing 4-49
 - 4.6.1.1. Basic principles 4-49
 - 4.6.1.2. Instrumentation 4-50
 - 4.6.1.3. Information provided 4-51
- 4.7. Summary 4-51
- 4.8. Problems 4-54
- 4.9. Figures 4-58
- 4.10. References 4-101
- 4.11. Additional reading 4-101

Chapter 5: Biomaterial Degradation 5-1

- 5.1. Introduction: Degradation in the biological environment 5-2
- 5.2. Corrosion/degradation of metals and ceramics 5-3
 - 5.2.1. Fundamentals of corrosion 5-3
 - 5.2.1.1. Oxidation-reduction reactions 5-3
 - 5.2.1.2. Half-cell potentials 5-5
 - 5.2.1.3. Nernst equation 5-6
 - 5.2.1.4. Galvanic corrosion 5-9
 - 5.2.2. Pourbaix diagrams and passivation 5-9
 - 5.2.3. Contribution of processing parameters 5-12

- 5.2.3.1. Crevice corrosion 5-12
- 5.2.3.2. Pitting corrosion 5-13
- 5.2.3.3. Intergranular corrosion 5-13
- 5.2.4. Contribution of the mechanical environment 5-13
 - 5.2.4.1. Stress and galvanic corrosion 5-14
 - 5.2.4.2. Stress corrosion cracking 5-14
 - 5.2.4.3. Fatigue corrosion 5-14
 - 5.2.4.4. Fretting corrosion 5-15
- 5.2.5. Contribution of the biological environment 5-15
- 5.2.6. Means of corrosion control 5-16
- 5.2.7. Ceramic degradation 5-17
- 5.3. Degradation of polymers 5-18
 - 5.3.1. Primary means of polymer degradation 5-18
 - 5.3.2. Chain scission by hydrolysis 5-19
 - 5.3.3. Chain scission by oxidation 5-20
 - 5.3.4. Other means of degradation 5-21
 - 5.3.4.1. Environmental stress cracking 5-21
 - 5.3.4.2. Enzyme-catalyzed degradation 5-22
 - 5.3.5. Effect of porosity 5-22
- 5.4. Biodegradable materials 5-22
 - 5.4.1. Biodegradable ceramics 5-24
 - 5.4.1.1. Erosion mechanisms 5-24
 - 5.4.1.2. Factors that influence degradation rate 5-24
 - 5.4.2. Biodegradable polymers 5-25
 - 5.4.2.1. Introduction and definitions 5-25
 - 5.4.2.2. Degradation mechanisms 5-28
 - 5.4.2.3. Factors the influence degradation rate 5-29
- 5.5. Techniques: Assays for extent of degradation 5-29
- 5.6. Summary 5-30
- 5.7. Problems 5-32
- 5.8. Tables 5-37
- 5.9. Figures 5-40
- 5.10. References 5-54
- 5.11. Additional reading 5-55

Chapter 6: Biomaterial Processing 6-1

- 6.1. Introduction: Importance of biomaterials processing 6-2
- 6.2. Processing to improve bulk properties 6-2
 - 6.2.1. Metals 6-2
 - 6.2.1.1. Alloying 6-3
 - 6.2.1.2. Strain hardening 6-4

- 6.2.1.3. Grain size refinement 6-5
- 6.2.1.4. Annealing 6-6
- 6.2.1.5. Precipitation hardening 6-9
- 6.2.2. Ceramics 6-9
- 6.2.3. Polymers 6-9
- 6.3. Processing to form desired shapes 6-12
 - 6.3.1. Metals 6-12
 - 6.3.1.1. Forming 6-12
 - 6.3.1.1.1. Forging 6-13
 - 6.3.1.1.2. Rolling 6-13
 - 6.3.1.1.3. Extrusion 6-13
 - 6.3.1.1.4. Drawing 6-13
 - 6.3.1.2. Casting 6-14
 - 6.3.1.2.1. Sand casting 6-14
 - 6.3.1.2.2. Investment casting 6-15
 - 6.3.1.3. Powder processing 6-15
 - 6.3.1.4. Rapid manufacturing 6-16
 - 6.3.1.5. Welding 6-16
 - 6.3.1.6. Machining 6-17
 - 6.3.2. Ceramics 6-17
 - 6.3.2.1. Glass forming techniques 6-17
 - 6.3.2.2. Casting and firing 6-18
 - 6.3.2.2.1. Casting 6-18
 - 6.3.2.2.2. Firing 6-19
 - 6.3.2.3. Powder processing 6-20
 - 6.3.2.4. Rapid manufacturing 6-20
 - 6.3.3. Polymers 6-21
 - 6.3.3.1. Thermoplasts vs. thermosets 6-21
 - 6.3.3.2. Forming 6-23
 - 6.3.3.2.1. Extrusion 6-23
 - 6.3.3.2.2. Fiber spinning 6-23
 - 6.3.3.3. Casting 6-25
 - 6.3.3.3.1. Compression molding 6-25
 - 6.3.3.3.2. Injection molding 6-25
 - 6.3.3.3.3. Blow molding 6-25
 - 6.3.3.4. Rapid manufacturing 6-26
- 6.4. Processing to improve biocompatibility 6-26
 - 6.4.1. Sterilization 6-27
 - 6.4.1.1. Steam sterilization 6-28
 - 6.4.1.2. Ethylene oxide sterilization 6-28
 - 6.4.1.3. Radiation sterilization 6-29

6.4.2. Fixation of natural materials 6-30

6.5. Summary 6-30

6.6. Problems 6-32

6.7. Tables 6-34

6.8. Figures 6-35

6.9. References 6-54

6.10. Additional reading 6-55

Chapter 7: Surface Properties of Biomaterials 7-1

7.1. Introduction: Concepts in surface chemistry and biology 7-2

7.1.1. Protein adsorption and biocompatibility 7-2

7.1.2. Surface properties governing protein adsorption 7-3

7.2. Physicochemical surface modification techniques 7-6

7.2.1. Introduction to surface modification techniques 7-6

7.2.2. Physicochemical surface coatings 7-7

7.2.2.1. Covalent surface coatings 7-7

7.2.2.1.1. Plasma treatment 7-7

7.2.2.1.2. Chemical vapor deposition 7-10

7.2.2.1.3. Physical vapor deposition 7-10

7.2.2.1.4. Radiation grafting/photografting 7-11

7.2.2.1.5. Self-assembled monolayers 7-12

7.2.2.2. Non-covalent surface coatings 7-14

7.2.2.2.1. Solution coatings 7-14

7.2.2.2.2. Langmuir-Blodgett films 7-14

7.2.2.2.3. Surface-modifying additives 7-15

7.2.3. Physicochemical surface modification methods with no overcoat 7-16

7.2.3.1. Ion beam implantation 7-17

7.2.3.2. Plasma treatment 7-18

7.2.3.3. Conversion coatings 7-18

7.2.3.4. Bioactive glasses 7-18

7.2.4. Laser methods for surface modification 7-19

7.3. Biological surface modification techniques 7-20

7.3.1. Covalent biological coatings 7-20

7.3.2. Non-covalent biological coatings 7-23

7.3.3. Immobilized enzymes 7-24

7.4. Surface properties and degradation 7-25

7.5. Patterning techniques for surfaces 7-25

7.6. Techniques: Introduction to surface characterization 7-27

7.6.1. Contact angle analysis 7-27

7.6.1.1. Basic principles 7-27

7.6.1.2. Instrumentation 7-30

7.6.1.3. Information provided	7-30
7.6.2. Light microscopy	7-31
7.6.2.1. Basic principles	7-31
7.6.2.2. Instrumentation	7-31
7.6.2.3. Information provided	7-32
7.6.3. Electron spectroscopy for chemical analysis (ESCA) or X-ray photoelectron spectroscopy (XPS)	7-33
7.6.3.1. Basic principles	7-33
7.6.3.2. Instrumentation	7-34
7.6.3.3. Information provided	7-35
7.6.4. Attenuated total internal reflectance Fourier transform infra-red spectroscopy (ATR-FTIR)	7-35
7.6.4.1. Basic principles	7-35
7.6.4.2. Instrumentation	7-36
7.6.4.3. Information provided	7-37
7.6.5. Secondary ion mass spectrometry (SIMS)	7-37
7.6.5.1. Basic principles	7-37
7.6.5.2. Instrumentation	7-38
7.6.5.3. Information provided	7-38
7.6.5. Electron microscopy: Transmission electron microscopy (TEM) and Scanning electron microscopy (SEM)	7-39
7.6.6.1. Basic principles	7-39
7.6.6.2. Instrumentation	7-40
7.6.6.3. Information provided	7-41
7.6.6. Scanning probe microscopies (SPM): Atomic force microscopy (AFM)	7-42
7.6.7.1. Basic principles	7-42
7.6.7.2. Instrumentation	7-42
7.6.7.3. Information provided	7-44
7.7. Summary	7-46
7.8. Problems	7-48
7.9. Tables	7-53
7.10. Figures	7-58
7.11. References	7-107
7.12. Additional reading	7-109

Chapter 8: Protein Interactions with Biomaterials 8-1

8.1. Introduction: Thermodynamics of protein adsorption	8-2
8.1.1. Gibbs free energy and protein adsorption	8-2
8.1.2. System properties governing protein adsorption	8-5
8.2. Protein structure	8-7
8.2.1. Amino acid chemistry	8-7

- 8.2.2. Primary structure 8-8
- 8.2.3. Secondary structure 8-9
- 8.2.4. Tertiary structure 8-12
- 8.2.5. Quaternary structure 8-13
- 8.3. Protein transport and adsorption kinetics 8-15
 - 8.3.1. Transport to the surface 8-15
 - 8.3.2. Adsorption kinetics 8-17
- 8.4. Reversibility of protein adsorption 8-18
 - 8.4.1. Reversible and irreversible binding 8-18
 - 8.4.2. Desorption and exchange 8-19
- 8.5. Techniques: Assays for protein type and amount 8-22
 - 8.5.1. High-performance liquid chromatography: affinity chromatography 8-23
 - 8.5.1.1. Basic principles 8-23
 - 8.5.1.2. Instrumentation 8-24
 - 8.5.1.3. Information provided 8-25
 - 8.5.2. Colorimetric assays 8-28
 - 8.5.2.1. Basic principles and instrumentation 8-28
 - 8.5.3. Fluorescent assays 8-29
 - 8.5.3.1. Basic principles 8-29
 - 8.5.3.2. Instrumentation 8-30
 - 8.5.3.3. Information provided 8-30
 - 8.5.4. Enzyme-linked immunosorbent assay (ELISA) 8-31
 - 8.5.4.1. Basic principles and procedures 8-31
 - 8.5.5. Western blotting 8-32
 - 8.5.5.1. Basic principles and procedures 8-32
- 8.6. Summary 8-33
- 8.7. Problems 8-35
- 8.8. Tables 8-39
- 8.9. Figures 8-42
- 8.10. References 8-74
- 8.11. Additional reading 8-75

Chapter 9: Cell Interactions with Biomaterials 9-1

- 9.1. Introduction: Cell-surface interactions and cellular functions 9-2
- 9.2. Cellular structure 9-3
 - 9.2.1. Cell membrane 9-3
 - 9.2.2. Cytoskeleton 9-5
 - 9.2.3. Mitochondria 9-6
 - 9.2.4. Nucleus 9-7
 - 9.2.4.1. Structure and function of the nucleus 9-7
 - 9.2.4.2. Structure of DNA 9-7

- 9.2.4.3. Structure of RNA 9-8
- 9.2.5. Endoplasmic reticulum 9-9
- 9.2.6. Vesicles 9-10
- 9.2.7. Membrane receptors and cell contacts 9-11
 - 9.2.7.1. Types of cell contacts 9-11
 - 9.2.7.2. Types of membrane receptors and ligands 9-12
- 9.3. Extracellular environment 9-14
 - 9.3.1. Collagen 9-14
 - 9.3.2. Elastin 9-16
 - 9.3.3. Proteoglycans 9-16
 - 9.3.4. Glycoproteins 9-17
 - 9.3.5. Other ECM components 9-19
 - 9.3.6. Matrix remodeling 9-20
 - 9.3.7. ECM molecules as biomaterials 9-21
- 9.4. Cell-environment interactions affect cellular functions 9-23
 - 9.4.1. Cell survival 9-24
 - 9.4.2. Cell proliferation 9-25
 - 9.4.2.1. Cell cycle: Interphase 9-25
 - 9.4.2.2. Cell cycle: Mitosis 9-26
 - 9.4.3. Cell differentiation 9-27
 - 9.4.4. Protein synthesis 9-28
 - 9.4.4.1. Collagen synthesis: transcription 9-29
 - 9.4.4.2. Collagen synthesis: translation and post-translational modification 9-30
- 9.5. Models of adhesion, spreading and migration 9-34
 - 9.5.1. Basic adhesion models: DLVO theory 9-34
 - 9.5.2. DLVO theory limitations and further models 9-36
 - 9.5.3. Models of cell spreading and migration 9-37
 - 9.5.3.1. Cell spreading 9-37
 - 9.5.3.2. Cell migration 9-37
- 9.6. Techniques: Assays to determine effects of cell-material interactions 9-43
 - 9.6.1. Cytotoxicity assays 9-43
 - 9.6.1.1. Direct contact assay 9-44
 - 9.6.1.2. Agar diffusion assay 9-45
 - 9.6.1.3. Elution assay 9-46
 - 9.6.2. Adhesion/spreading assays 9-47
 - 9.6.3. Migration assays 9-48
 - 9.6.4. DNA and RNA assays 9-49
 - 9.6.4.1. Polymerase chain reaction (PCR) and Reverse-transcription polymerase chain reaction (RT-PCR) 9-50
 - 9.6.4.2. Southern and Northern blotting 9-51
 - 9.6.5. Protein production assays: Immunostaining 9-52

- 9.7. Summary 9-53
- 9.8. Problems 9-57
- 9.9. Tables 9-61
- 9.10. Figures 9-62
- 9.11. References 9-113
- 9.12. Additional reading 9-115

Chapter 10: Biomaterial Implantation and Acute Inflammation 10-1

- 10.1. Introduction: Overview of innate and acquired immunity 10-2
 - 10.1.1. Characteristics of leukocytes 10-3
 - 10.1.1.1. Leukocyte types 10-3
 - 10.1.1.2. Leukocyte formation 10-4
 - 10.1.1.3. Life span of leukocytes 10-4
 - 10.1.2. Sources of innate immunity 10-5
- 10.2. Clinical signs of inflammation and their causes 10-5
- 10.3. Role of tissue macrophages and neutrophils 10-6
 - 10.3.1. Migration of neutrophils 10-7
 - 10.3.2. Actions of neutrophils 10-8
 - 10.3.2.1. Phagocytosis 10-8
 - 10.3.2.2. Respiratory burst 10-9
 - 10.3.2.3. Secretion of chemical mediators 10-9
- 10.4. Role of other granulocytes 10-11
 - 10.4.1. Monocytes/macrophages 10-11
 - 10.4.2. Actions of macrophages 10-11
 - 10.4.2.1. Phagocytosis and biomaterials 10-11
 - 10.4.2.2. Secretion of chemical mediators 10-13
 - 10.4.2.3. Role as antigen presenting cells 10-14
 - 10.4.3. Other granulocytes 10-15
- 10.5. Termination of acute inflammation 10-16
- 10.6. Techniques: In vitro assays for inflammatory response 10-17
 - 10.6.1. Leukocyte assays 10-17
 - 10.6.2. Other assays 10-19
- 10.7. Summary 10-20
- 10.8. Problems 10-22
- 10.9. Tables 10-24
- 10.10. Figures 10-27
- 10.11. References 10-34
- 10.12. Additional reading 10-34

Chapter 11: Wound Healing and the Presence of Biomaterials 11-1

- 11.1. Introduction: Formation of granulation tissue 11-2
- 11.2. Foreign body reaction 11-3
- 11.3. Fibrous encapsulation 11-4
- 11.4. Chronic inflammation 11-7
- 11.5. Four types of resolution 11-8
- 11.6. Repair vs. regeneration: wound healing in skin 11-9
 - 11.6.1. Skin repair 11-9
 - 11.6.2. Skin regeneration 11-11
- 11.7. Techniques: In vivo assays for inflammatory response 11-12
 - 11.7.1. Considerations in development of animal models 11-14
 - 11.7.1.1. Choice of animal 11-14
 - 11.7.1.2. Choice of implant site 11-14
 - 11.7.1.3. Length of study 11-14
 - 11.7.1.4. Biomaterial considerations: dose and administration 11-15
 - 11.7.1.5. Inclusion of proper controls 11-16
 - 11.7.2. Methods of assessment 11-17
 - 11.7.2.1. Histology/immunohistochemistry 11-17
 - 11.7.2.2. Electron microscopy 11-17
 - 11.7.2.3. Biochemical assays 11-18
 - 11.7.2.4. Mechanical testing 11-19
- 11.8. Summary 11-20
- 11.9. Problems 11-22
- 11.10. Tables 11-25
- 11.11. Figures 11-28
- 11.12. References 11-36
- 11.13. Additional reading 11-37

Chapter 12: Immune Response to Biomaterials 12-1

- 12.1. Introduction: Overview of acquired immunity 12-2
- 12.2. Antigen presentation and lymphocyte maturation 12-4
 - 12.2.1. Major histocompatibility complex (MHC) molecules 12-4
 - 12.2.1.1. MHC Class I 12-4
 - 12.2.1.2. MHC Class II 12-4
 - 12.2.1.3. MHC molecule variation and tissue typing 12-5
 - 12.2.1.4. Intracellular complexation with MHC molecules 12-6
 - 12.2.2. Maturation of lymphocytes 12-7
 - 12.2.3. Activation and formation of clonal populations 12-8
- 12.3. B cells and antibodies 12-8
 - 12.3.1. Types of B cells 12-8

- 12.3.2. Characteristics of antibodies 12-9
 - 12.3.2.1. Structure of antibodies 12-9
 - 12.3.2.2. Classes of antibodies 12-9
 - 12.3.2.3. Mechanisms of antibody action 12-10
- 12.4. T cells 12-12
 - 12.4.1. Types of T cells 12-12
 - 12.4.2. Helper T lymphocytes (Th) 12-12
 - 12.4.3. Cytotoxic T lymphocytes (Tc) 12-13
- 12.5. The complement system 12-14
 - 12.5.1. Classical pathway 12-14
 - 12.5.2. Alternative pathway 12-15
 - 12.5.3. Membrane attack complex 12-16
 - 12.5.4. Regulation of the complement system 12-17
 - 12.5.5. Effects of the complement system 12-18
- 12.6. Undesired immune responses to biomaterials 12-19
 - 12.6.1. Innate vs. acquired responses to biomaterials 12-20
 - 12.6.2. Hypersensitivity 12-20
 - 12.6.2.1. Type I: IgE mediated 12-21
 - 12.6.2.2. Type II: Antibody mediated 12-21
 - 12.6.2.3. Type III: Immune complex mediated 12-22
 - 12.6.2.4. Type IV: T cell mediated 12-22
 - 12.6.2.5. Hypersensitivity and the classes of biomaterials 12-23
- 12.7. Techniques: Assays for immune response 12-25
 - 12.7.1. In vitro assays 12-25
 - 12.7.2. In vivo assays 12-27
- 12.8. Summary 12-28
- 12.9. Problems 12-32
- 12.10. Tables 12-34
- 12.11. Figures 12-35
- 12.12. References 12-51
- 12.13. Additional reading 12-51

Chapter 13: Biomaterials and Thrombosis 13-1

- 13.1. Introduction: Overview of hemostasis 13-2
- 13.2. Role of platelets 13-2
 - 13.2.1. Platelet characteristics and functions 13-2
 - 13.2.2. Platelet activation 13-3
 - 13.2.2.1. Means of activation 13-3
 - 13.2.2.2. Sequelae of activation 13-3
- 13.3. Coagulation cascade 13-5
 - 13.3.1. Intrinsic pathway 13-5

- 13.3.2. Extrinsic pathway 13-6
- 13.3.3. Common pathway 13-7
- 13.4. Means of limiting clot formation 13-9
- 13.5. Role of endothelium 13-11
- 13.6. Tests for hemocompatibility 13-13
 - 13.6.1. General testing concerns 13-13
 - 13.6.2. In vitro assessment 13-14
 - 13.6.3. In vivo assessment 13-16
- 13.7. Summary 13-18
- 13.8. Problems 13-20
- 13.9. Tables 13-25
- 13.10. Figures 13-27
- 13.11. References 13-32
- 13.12. Additional reading 13-33

Chapter 14: Infection, Tumorigenesis and Calcification of Biomaterials 14-1

- 14.1. Introduction: Overview of other potential problems with biomaterials implantation 14-2
- 14.2. Infection 14-2
 - 14.2.1. Common pathogens and categories of infection 14-3
 - 14.2.2. Steps to infection 14-4
 - 14.2.3. Characteristics of the bacterial surface, the biomaterial surface and the media 14-5
 - 14.2.3.1. Bacterial surface properties 14-5
 - 14.2.3.1.1. Gram positive vs. gram negative bacteria 14-5
 - 14.2.3.1.2. Cell capsule and biofilm 14-6
 - 14.2.3.2. Biomaterial surface properties 14-7
 - 14.2.3.3. Media properties 14-8
 - 14.2.4. Bacterial adhesion involves both specific and non-specific interactions 14-8
 - 14.2.5. Summary of implant-associated infections 14-9
- 14.3. Techniques for infection experiments 14-10
 - 14.3.1. Means to characterize bacterial surfaces 14-11
 - 14.3.1.1. Surface hydrophobicity 14-11
 - 14.3.1.2. Surface charge 14-12
 - 14.3.2. In vitro and in vivo models of infection 14-14
 - 14.3.2.1. In vitro bacterial adhesion 14-14
 - 14.3.2.2. Ex vivo and in vivo infection models 14-15
- 14.4. Tumorigenesis 14-16
 - 14.4.1. Definitions and steps of tumorigenesis 14-16
 - 14.4.2. Chemical vs. foreign body carcinogenesis 14-18
 - 14.4.3. Timeline for foreign body tumorigenesis 14-19

- 14.4.3.1. Foreign body tumorigenesis with large implants 14-19
- 14.4.3.2. Foreign body tumorigenesis with small fibers 14-20
- 14.4.4. Summary of biomaterials-related tumorigenesis 14-20
- 14.5. Techniques for tumorigenesis experiments 14-21
 - 14.5.1. In vitro models 14-21
 - 14.5.2. In vivo models 14-22
- 14.6. Pathologic calcification 14-23
 - 14.6.1. Introduction to pathologic calcification 14-23
 - 14.6.2. Mechanism of pathologic calcification 14-24
 - 14.6.3. Summary and techniques to reduce pathologic calcification 14-26
- 14.7. Techniques for pathologic calcification experiments 14-26
 - 14.7.1. In vitro models of calcification 14-27
 - 14.7.2. In vivo models of calcification 14-27
 - 14.7.3. Sample assessment 14-28
- 14.8. Summary 14-30
- 14.9. Problems 14-33
- 14.10. Figures 14-36
- 14.11. References 14-45
- 14.12. Additional reading 14-46
