

# **Fundamentals of electronic image processing.**

Weeks, Arthur R.

ISBN : 9780470544709

## **Contents**

Preface

Acknowledgments

Half Title

Introduction to electronic image processing

Historical Background

Applications of Image Processing

Introduction to Visual Perception

Image Formation

Sampling and Quantization

Image Neighbors and Distances

Typical Image Processing Systems

Transforms Used in Electronic Image Processing

The Fourier series

The One-Dimensional Fourier Transform

The Two-Dimensional Fourier Transform

Important Functions Relating to the Fourier Transform

The Discrete Fourier Transform

Example and Properties of the Discrete Fourier Transform

Computation of the Discrete Fourier Transform

Other Image Transforms

Image enhancement by point operations

An Overview of Point Processing

Constant and Nonlinear Operations

Operations Between Images

Histogram Techniques

Spatial Filtering and Fourier Frequency Methods

Various Types of Noise that Appear in Images

Spatial Filtering

Spatial Frequency Filtering

Image Restoration

Nonlinear Image Processing Techniques

Nonlinear spatial filters based on order statistics

Nonlinear Mean Filters

Adaptive Filters

The Homomorphic Filter

Color Image Processing

Color fundamentals

Color Models

Examples of Color Image Processing

Pseudocoloring and Color Displays

Image Geometry and Morphological Filters

Spatial interpolation

Image Geometry

Binary Morphology - Dilation and Erosion

Binary Morphology - Opening, Closing, Edge Detection, and Skeletonization

Binary Morphology - Hit-Miss, Thinning, Thickening, and Pruning

Binary Morphology - Granulometries and the Pattern Spectrum

Graylevel Morphology

Image Segmentation and Representation

Image thresholding

Edge, Line, and Point Detection

Region Based Segmentation

Image Representation

Image Compression

Compression fundamentals

Error-Free Compression Methods

Lossy Compression Methods

Bibliography

Index
