

Nuclear medicine instrumentation

Prekeges, Jennifer

ISBN 9780763766382

Part I Small Instruments

Chapter 1 Gas-filled Detectors

Chapter 2 Scintillation Detectors

Chapter 3 Semiconductor Detectors

Chapter 4 Factors relating to Radiation Measurement

Part II Gamma Camera

Chapter 5 The Gamma Camera

Chapter 6 Image Digitization and Display

Chapter 7 Collimators

Chapter 8 Image Characteristics and Performance Measures in Planar Imaging

Chapter 9 Departmental Quality Assurance and Quality Control of Gamma Cameras

Part III Single Photo Emission Computed Tomography (SPECT)

Chapter 10 Single-Photon Emission Computed Tomography (SPECT)

Chapter 11 Image Characteristics and Effect of Acquisition Parameters in SPECT Imaging

Chapter 12 Attenuation Correction, Scatter Compensation, and Resolution Recovery

Chapter 13 Quality Control and Artifacts in SPECT

Part IV Positron Emission Tomography (PET)

Chapter 14 Principles of Positron Emission Tomography (PET)

Chapter 15 PET Instrumentation

Chapter 16 Image Characteristics, Performance Measures, and Quantitation in PET

Chapter 17 Quality Control and Artifacts in PET

Chapter 18 Computed Tomography and Its Application to Nuclear Medicine

Appendices

Appendix A Atomic Structure and Interactions of High-energy Radiation

Appendix B Basic Electronics and Devices

Appendix C Film and Film Processing

Appendix D Computer Fundamentals and Systems

Appendix E Collimator Mathematics
