

**Introduction to Computational Chemistry, 2nd Edition**

Jensen, Frank

**ISBN: 978-0-470-01187-4**

Preface to the First Edition.

Preface to the Second Edition.

**1. Introduction.**

**2 Force Field Methods.**

**3. Electronic Structure Methods: Independent-Particle Models.**

**4. Electron Correlation Methods.**

**5. Basis Sets.**

**6. Density Functional Methods.**

**7. Valence Bond Methods.**

**8. Relativistic Methods.**

**9. Wave Function Analysis.**

**10. Molecular Properties.**

**11. Illustrating the Concepts.**

**12. Optimization Techniques.**

**13. Statistical Mechanics and Transition State Theory.**

**14. Simulation Techniques.**

**15. Qualitative Theories.**

**16. Mathematical Methods.**

**17. Statistics and QSAR.**

**18. Concluding Remarks.**

Appendix A. Notation.

Appendix B.

B.1 The Variational Principle.

B.2 The Hohenberg-Kohn Theorems.

B.3 The Adiabatic Connection Formula.

Appendix C. Atomic Units.

Appendix D. Z-Matrix Construction.

Index.
