

Noninvasive Instrumentation and Measurement in Medical Diagnosis

ISBN 0849309611

Table of Contents

INTRODUCTION TO NON-INVASIVE MEASUREMENT

Definition of Non-Invasive Measurement, Minimally Invasive Measurements

Modalities of NI Instrumentation

VISUAL INSPECTION OF TISSUES WITH ENDOSCOPES AND OTHER OPTICAL DEVICES

Ophthalmoscopes, Slit Lamps, and Oscopes

Endoscopes

CCD Cameras

Non-Invasive Diagnosis of Skin Lesions

NON-INVASIVE DIAGNOSIS USING SOUNDS FROM WITHIN THE BODY

Means of Analysis for Acoustic Signals

Heart Sounds

Breath Sounds

Otoacoustic Emissions

MEASUREMENT OF ELECTRICAL POTENTIALS FROM THE BODY SURFACE

Electrodes

Biopotential Amplifiers

The ECG

The Electromyogram (EMG)

The Electroencephalogram (EEG)

OTHER BODY SURFACE POTENTIALS

The Electroculogram (EOG)

The Electroretinogram (ERG)

The Electrocochleogram (EcoG)

Discussion

THE MAGNETOENCEPHALOGRAM (MEG)

The SQUID and SQUID Arrays

Other BioMagnetic Measurements

NON-INVASIVE MEASUREMENT OF BLOOD PRESSURE

The Cuff Sphygmomanometer

Other Means of Estimating Blood Pressure Non-Invasively

BODY TEMPERATURE MEASUREMENTS

Conductive Heat Transfer and Thermometer Response Time

The LIT Blackbody Thermometer

NON-INVASIVE BLOOD GAS SENSING WITH ELECTRODES

Transcutaneous O₂ Sensing
Transcutaneous CO₂ Sensing

TESTS ON NATURALLY-VOIDED BODY FLUIDS

Instrumental Methods
What Can Be Learned from Urine
What Can Be Learned from Feces
What Can Be Learned from Saliva
What Can Be Learned from the Breath

PLETHYSMOGRAPH

Volume Displacement Plethysmography
Impedance Plethysmography
Photo-Plethysmography

PULMONARY FUNCTION TESTS

Spirometers and Related Equipment
Tests with Spirometers

MEASUREMENT OF BASAL METABOLISM

The BMR Test Procedures

OCULAR TONOMETRY

The No-Touch, Air Puff Tonometer
Contact Tonometers

NI TESTS INVOLVING THE INPUT OF AUDIBLE SOUND ENERGY

Zac Measurements of the Respiratory System (RAIMS)
Zac Measurements of the Eardrum (Tympanometry)
Trans-Thoracic Acoustic Transfer Function: a Possible Measure of Lung Condition

NI TESTS USING ULTRASOUND (Excluding Imaging)

The Doppler Effect
Reflected Doppler Ultrasound for Blood and Tissue Velocity Measurements
A No Touch Ocular Pulse Measurement System (NOTOPM)
The Constant-Phase, Closed-Loop, Type-1, Ranging System
Measurement of Tissue Glucose Concentration by Closed-Loop, Constant-Phase, CW
Ultrasound (A Prototype System)

NI APPLICATIONS OF PHOTON RADIATION (EXCLUDING IMAGING)

Bone Densitometry
Non-Invasive Diagnosis by Tissue Fluorescence
Optical Interferometric Measurement of Nanometer Displacements of Biological
Surfaces
Laser Doppler Velocimetry
Transcutaneous IR Spectroscopy
Estimation of Blood Glucose for NI Measurement of Optical Rotation of the Aqueous
Humor: A Prototype Instrument

Pulse Oximetry
Non-Invasive Measurement of Certain Biomolecules by Raman Spectroscopy

A SURVEY OF MEDICAL IMAGING SYSTEMS

X-Rays

Tomography

Positron Emission Tomography (PET)

Magnetic Resonance Imaging (MRI)

Single Photon Emission Tomography (SPECT)

Optical Coherence Tomography (OCT)

Ultrasound Imaging

Other Imaging Modalities

FUTURE TRENDS IN NI MEASUREMENTS AND DIAGNOSIS

NI Chemical Tests for Cancer not Involving DNA

Fluorescence Tests for Biomolecules: FISH and SKY

The SpectraCube® System

The DNA Microarray

BIBLIOGRAPHY AND REFERENCES

Each section also includes an introduction and a chapter summary.
