1 Introduction to Biomedical Signals 1

1.1 The Nature of Biomedical Signals 1

1.2 Examples of Biomedical Signals 5

1.2.1 The action potential 5

1.2.2 The electroneurogram (ENG) 9

1.2.3 The electromyogram (EMG) 11

1.2.4 The electrocardiogram (ECG) 14

1.2.5 The electroencephalogram (EEG) 28

1.2.6 Event-related potentials (ERPs) 30

1.2.7 The electrogastrogram (EGG) 31

1.2.8 The phonocardiogram (PCG) 34

1.2.9 The carotid pulse (CP) 38

1.2.10 Signals from catheter-tip sensors 40
1.2.11 The speech signal 40
1.2.12 The vibromyogram (VMG) 46
1.2.13 The vibroarthrogram (VAG) 46
1.2.14 Oto-acoustic emission signals 48
1.3 Objectives of Biomedical Signal Analysis 48
1.4 Difficulties in Biomedical Signal Analysis 52
1.5 Computer-aided Diagnosis 55
1.6 Remarks 57
1.7 Study Questions and Problems 58
1.8 Laboratory Exercises and Projects 59

2 Concurrent, Coupled, and Correlated Processes 61
2.1 Problem Statement 62
2.2 Illustration of the Problem with Case-studies 62
2.2.1 The electrocardiogram and the phonocardiogram 62
2.2.2 The phonocardiogram and the carotid pulse 63
2.2.3 The ECG and the atrial electrogram 64
2.2.4 Cardio-respiratory interaction 66
2.2.5 The electromyogram and the vibromyogram 67
2.2.6 The knee-joint and muscle vibration signals 67
2.3 Application: Segmentation of the PCG 69
2.4 Remarks 71
2.5 Study Questions and Problems 71
2.6 Laboratory Exercises and Projects 71

3 Filtering for Removal of Artifacts 73
3.1 Problem Statement 73
3.1.1 Random noise, structured noise, and physiological interference 74
3.1.2 Stationary versus nonstationary processes 81
3.2 Illustration of the Problem with Case-studies 85
3.2.1 Noise in event-related potentials 85
3.2.2 High-frequency noise in the ECG 85
3.2.3 Motion artifact in the ECG 87
3.2.4 Power-line interference in ECG signals 87
3.2.5 Maternal interference in fetal ECG 90
3.2.6 Muscle-contraction interference in VAG signals 91
3.2.7 Potential solutions to the problem 93

3.3 Time-domain Filters 93
3.3.1 Synchronized averaging 94
3.3.2 Moving-average filters 99
3.3.3 Derivative-based operators to remove low-frequency artifacts 109
3.4 Frequency-domain Filters 115
3.4.1 Removal of high-frequency noise: Butterworth lowpass filters 118
3.4.2 Removal of low-frequency noise: Butterworth highpass filters 127
3.4.3 Removal of periodic artifacts: Notch and comb filters 130
3.5 Optimal Filtering: The Wiener Filter 137
3.6 Adaptive Filters for Removal of Interference 146
3.6.1 The adaptive noise canceler 147
3.6.2 The least-mean-squares adaptive filter 150
3.6.3 The recursive least-squares adaptive filter 151
3.7 Selecting an Appropriate Filter 158
3.8 Application: Removal of Artifacts in the ECG 162
3.9 Application: Maternal – Fetal ECG 165
3.10 Application: Muscle-contraction Interference 166
3.11 Remarks 171
3.12 Study Questions and Problems 171
3.13 Laboratory Exercises and Projects 175

4 Event Detection 177
4.1 Problem Statement 177
4.2 Illustration of the Problem with Case-studies 178
4.2.1 The P, QRS, and T waves in the ECG 178
4.2.2 The first and second heart sounds 179
4.2.3 The dicrotic notch in the carotid pulse 180
4.2.4 EEG rhythms, waves, and transients 180
4.3 Detection of Events and Waves 182
4.3.1 Derivative-based methods for QRS detection 183
4.3.2 The Pan-Tompkins algorithm for QRS detection 187
4.3.3 Detection of the dicrotic notch 191
4.4 Correlation Analysis of EEG channels 191
4.4.1 Detection of EEG rhythms 193
4.4.2 Template matching for EEG spike-and-wave detection 200

4.5 Cross-spectral Techniques 200
4.5.1 Coherence analysis of EEG channels 200
4.6 The Matched Filter 204
4.6.1 Detection of EEG spike-and-wave complexes 204
4.7 Detection of the P Wave 205
4.8 Homomorphic Filtering 212
4.8.1 Generalized linear filtering 212
4.8.2 Homomorphic deconvolution 213
4.8.3 Extraction of the vocal-tract response 216
4.9 Application: ECG Rhythm Analysis 222
4.10 Application: Identification of Heart Sounds 225
4.11 Application: Detection of the Aortic Component of S2 227
4.12 Remarks 231
4.13 Study Questions and Problems 233
4.14 Laboratory Exercises and Projects 234

5 Waveshape and Waveform Complexity 237
5.1 Problem Statement 237
5.2 Illustration of the Problem with Case-studies 238
5.2.1 The QRS complex in the case of bundle-branch block 238
5.2.2 The effect of myocardial ischemia and infarction on QRS waveshape 238
5.2.3 Ectopic beats 238
5.2.4 EMG interference pattern complexity 239
5.2.5 PCG intensity patterns 239
5.3 Analysis of Event-related Potentials 240
5.4 Morphological Analysis of ECG Waves 240
5.4.1 Correlation coefficient 240
5.4.2 The minimum-phase correspondent and signal length 241
5.4.3 ECG waveform analysis 248
5.5 Envelope Extraction and Analysis 249
5.5.1 Amplitude demodulation 251
5.5.2 Synchronized averaging of PCG envelopes 252
5.5.3 The envelogram 255
5.6 Analysis of Activity 256
5.6.1 The root mean-squared value 259
5.6.2 Zero-crossing rate 259
5.6.3 Turns count 260
5.6.4 Form factor 262

5.7 Application: Normal and Ectopic ECG Beats 263
5.8 Application: Analysis of Exercise ECG 265
5.9 Application: Analysis of Respiration 266
5.10 Application: Correlates of Muscular Contraction 269
5.11 Remarks 269
5.12 Study Questions and Problems 272
5.13 Laboratory Exercises and Projects 274

6 Frequency-domain Characterization 277
6.1 Problem Statement 278
6.2 Illustration of the Problem with Case-studies 279
6.2.1 The effect of myocardial elasticity on heart sound spectra 279
6.2.2 Frequency analysis of murmurs to diagnose valvular defects 280
6.3 The Fourier Spectrum 282
6.4 Estimation of the Power Spectral Density Function 287
6.4.1 The periodogram 288
6.4.2 The need for averaging 289
6.4.3 The use of windows: Spectral resolution and leakage 291
6.4.4 Estimation of the autocorrelation function 297
6.4.5 Synchronized averaging of PCG spectra 298
6.5 Measures Derived from PSDs 302
6.5.1 Moments of PSD functions 305
6.5.2 Spectral power ratios 307
6.6 Application: Evaluation of Prosthetic Valves 308
6.7 Remarks 310
6.8 Study Questions and Problems 311
6.9 Laboratory Exercises and Projects 312

7 Modeling Biomedical Systems 315
7.1 Problem Statement 315
7.2 Illustration of the Problem 316
7.2.1 Motor-unit firing patterns 316
7.2.2 Cardiac rhythm 317
7.2.3 Formants and pitch in speech 317
7.2.4 Patello-femoral crepitus 319
7.3 Point Processes 320
7.4 Parametric System Modeling 327

7.5 Autoregressive or All-pole Modeling 333
7.5.1 Spectral matching and parameterization 339
7.5.2 Optimal model order 342
7.5.3 Relationship between AR and cepstral coefficients 346
7.6 Pole-zero Modeling 355
7.6.1 Sequential estimation of poles and zeros 358
7.6.2 Iterative system identification 360
7.6.3 Homomorphic prediction and modeling 366
7.7 Electromechanical Models of Signal Generation 371
7.7.1 Sound generation in coronary arteries 371
7.7.2 Sound generation in knee joints 374
7.8 Application: Heart-rate Variability 377
7.9 Application: Spectral Modeling and Analysis of PCG Signals 380
7.10 Application: Coronary Artery Disease 386
7.11 Remarks 386
7.12 Study Questions and Problems 389
7.13 Laboratory Exercises and Projects 390

8 Analysis of Nonstationary Signals 391
8.1 Problem Statement 392
8.2 Illustration of the Problem with Case-studies 392
8.2.1 Heart sounds and murmurs 392
8.2.2 EEG rhythms and waves 393
8.2.3 Articular cartilage damage and knee-joint vibrations 393
8.3 Time-variant Systems 396
8.3.1 Characterization of nonstationary signals and dynamic systems 397
8.4 Fixed Segmentation 399
8.4.1 The short-time Fourier transform 400
8.4.2 Considerations in short-time analysis 402
8.5 Adaptive Segmentation 405
8.5.1 Spectral error measure 408
8.5.2 ACF distance 413
8.5.3 The generalized likelihood ratio 414
8.5.4 Comparative analysis of the ACF, SEM, and GLR methods 416
8.6 Use of Adaptive Filters for Segmentation 419
8.6.1 Monitoring the RLS filter 420

8.6.2 The RLS lattice filter 421
8.7 Application: Adaptive Segmentation of EEG Signals 431
8.8 Application: Adaptive Segmentation of PCG Signals 438
8.9 Application: Time-varying Analysis of Heart-rate Variability 438
8.10 Remarks 444
8.11 Study Questions and Problems 444
8.12 Laboratory Exercises and Projects 444

9 Pattern Classification and Diagnostic Decision 445
9.1 Problem Statement 446
9.2 Illustration of the Problem with Case-studies 446
9.2.1 Diagnosis of bundle-branch block 446
9.2.2 Normal or ectopic ECG beat? 447
9.2.3 Is there an alpha rhythm? 448
9.2.4 Is a murmur present? 448
9.3 Pattern Classification 449
9.4 Supervised Pattern Classification 450
9.4.1 Discriminant and decision functions 450
9.4.2 Distance functions 451
9.4.3 The nearest-neighbor rule 452
9.5 Unsupervised Pattern Classification 453
9.5.1 Cluster-seeking methods 453
9.6 Probabilistic Models and Statistical Decision 457
9.6.1 Likelihood functions and statistical decision 457
9.6.2 Bayes classifier for normal patterns 460
9.7 Logistic Regression Analysis 462
9.8 The Training and Test Steps 463
9.8.1 The leave-one-out method 463
9.9 Neural Networks 464
9.10 Measures of Diagnostic Accuracy and Cost 466
9.10.1 Receiver operating characteristics 469
9.10.2 McNemar's test of symmetry 472
9.11 Reliability of Classifiers and Decisions 473
9.12 Application: Normal versus Ectopic ECG Beats 474
9.13 Application: Detection of Knee-joint Cartilage Pathology 480
9.14 Remarks 483
9.15 Study Questions and Problems 485
9.16 Laboratory Exercises and Projects 487
